# **Section 1**

## **Sampling Procedures and Test Results**

## INTRODUCTION

Morsø Jernstøberi A/S retained OMNI to perform U.S. Environmental Protection Agency (EPA) third party certification on the 2B Standard 2020 freestanding room heater. The 2B Standard 2020 is a cast iron freestanding wood burning room heater. The firebox is constructed of cast iron. Usable firebox volume was measured to be 0.6925 cubic feet and the stove is vented through 6" flue collar located on the stove top.

Testing was performed at Danish Technological Institute (DTI) located at Kongsvangalle 29, DK-8000 Aarhus C, Denmark. Report number 300-ELAB-2472-EPA dated February 4, 2020 was generated by DTI and submitted to OMNI for review and third-party certification.

This report is organized in accordance with the EPA-recommended outline and is summarized in the Table of Contents immediately preceding this section. The results in this report are limited to the item submitted.

## SAMPLING PROCEDURE

The 2B Standard 2020 was tested in accordance with the U.S. EPA 40 CFR Part 60, Subpart AAA – Standards of Performance for New Residential Wood Heaters using EPA ASTM E2515 and E3053 *per* EPA Alt-125's requirements for cordwood testing. Particulate emissions were measured using sampling trains consisting of two Teflon coated 47mm filters (front and back).

The model 2B Standard 2020 was tested for thermal efficiency and carbon monoxide (CO) emissions in accordance with CSA B415.1-10 using Beech cordwood.

## SUMMARY OF RESULTS

The weighted average emissions of the four test runs included in the results indicate a particulate emission rate of 0.55 grams per hour. Particulate emissions were sampled on two of the high burn fuel loads. The 2B Standard 2020 results are within the emission limit of 2.5 g/h for affected facilities tested with cordwood, manufactured on or after May 15, 2020.

The proportionality results for all 4 test runs were acceptable when calculated at a 10-minute sample rate. Quality check results for each test run are presented in appendix C of this report.

## INDIVIDUAL RUN SUMMARIES

- Run 1 - HF** Test procedures followed to produce a high burn rate with a primary air setting of fully open. Observed burn rate was calculated at 1.89 kg/hr. Emissions results were calculated using particulate sampling from kindling, start-up fuel, and test fuel load combined (cold to hot). Burn rate, and efficiency were calculated using data from the test fuel load only (hot to hot). No sampling anomalies occurred; this test run was determined to be valid for inclusion in the weighted average.
- Run 2 - LF** Test procedures were followed to produce a medium burn rate with a primary air setting of full closed. A factory stop is installed to require minimum air setting of  $\frac{3}{4}$  rotation of the spin draft from full closed. Observed burn rate was calculated at 0.48 kg/hr. Emissions and efficiency results were calculated using a hot to hot burn cycle, a coal bed generated by the high burn procedure was used. No sampling anomalies occurred; this test run was determined to be valid for inclusion in the weighted average.
- Run 3 - HF** Test procedures followed to produce a high burn rate with a primary air setting of fully open. Observed burn rate was calculated at 1.74 kg/hr. Emissions results were calculated using particulate sampling from kindling, start-up fuel, and test fuel load combined (cold to hot). Burn rate, and efficiency were calculated using data from the test fuel load only (hot to hot). No sampling anomalies occurred; this test run was determined to be valid for inclusion in the weighted average.
- Run 4 - MF** Test procedures were followed to produce a low burn rate with a primary air setting of one revolution on the spin draft from full closed. Observed burn rate was calculated at 0.66 kg/hr. Emissions and efficiency results were calculated using a hot to hot burn cycle, a coal bed generated by the high burn procedure was used. No sampling anomalies occurred; this test run was determined to be valid for inclusion in the weighted average.

**Table 1 – Particulate Emissions**

Run	Burn Rate Calculated from a Hot to Hot burn cycle (kg/hr dry)	ASTM E2515 Emissions (g/hr)	ASTM E3053 Weighting Factor (%)	ASTM E3053 Weighted Emissions (g/hr)
1	1.89	1.219	10	0.219
2	0.48	0.18	40	0.072
3	1.74	1.89	10	0.189
4	0.66	0.17	40	0.068

The sum of weighted particulate emission of 3 test runs:  $0.219 + 0.072 + 0.189 + 0.068 = \mathbf{0.55 \text{ g/hr}}$ .

1. Based on a cold start including kindling and start-up fuel.

**Table 2 – Particulate Emissions (First Hour)**

Run	ASTM E2515 Emissions – First Hour (g/hr)
1	2.39
2	1.07
3	2.44
4	0.52

**Table 3 – B415.1 Efficiency and CO Emissions**

Run	Heat Output (BTU/hr)	HHV Efficiency (%)	LHV Efficiency (%)	ASTM E3053 Weighted HHV Efficiency	CO Emissions (g/MJ Output)	CO Emissions (g/kg Dry Fuel)	CO Emissions (g/min)
1	25,299	74.7	80.0	7.47	1.03	14.5	0.46
2	6,959	81.7	87.5	32.68	2.69	41.3	0.33
3	23,190	74.1	79.4	7.41	1.12	15.6	0.46
4	9,615	81.5	87.3	32.6	2.09	32.0	0.35

Weighted average HHV efficiency of 4 tests:  $7.47 + 32.68 + 7.41 + 32.60 = \mathbf{80.16 \%}$ .

Average CO emissions:  $(0.46 + 0.33 + 0.46 + 0.35)/4 = \mathbf{0.40 \text{ g/min}}$

**Table 4 – Test Facility Conditions**

Run	Room Temperature (°F)		Barometric Pressure (Hg)		Air Velocity (ft/min)	
	Before	After	Before	After	Before	After
1	70.7	71.4	30.12	30.00	<50	<50
2	71.8	70.0	30.29	30.23	<50	<50
3	70.3	71.6	30.19	30.19	<50	<50
4	73.4	70.3	30.19	30.08	<50	<50

**Table 5 – Kindling and Start-up Fuel Description Summary**

Run	Kindling Weight Wet Basis (lbs)	Start-up Fuel Weight Wet Basis (lbs)	Residual Start-up fuel weight (lbs)
1	1.28	1.80	0.77
3	1.28	1.79	0.77

**Table 6 – Fuel Measurement and Cordwood Description Summary – TEST**

Run	Test Fuel Wet Basis (lbs)	Firebox Volume (ft <sup>3</sup> )	Fuel Loading Density Wet Basis (lbs/ft <sup>3</sup> )	Test Fuel Dry Basis (lbs)	<sup>1</sup> Test Fuel Consumed During Test Dry Basis (lbs)
1	6.93	0.69	10.0	5.78 + 2.65	6.99 <sup>1</sup>
2	8.15	0.69	11.77	6.73	6.73
3	6.96	0.69	10.0	5.79 + 2.65	7.01 <sup>1</sup>
4	8.50	0.69	12.27	7.08	7.08

- Includes start-up and kindling fuel for high burn tests 1, 3

**Table 7 – Dilution Tunnel Gas Measurements and Sampling Data Summary**

Run	Length of Test (hh:mm:ss)	Average Dilution Tunnel Gas Measurements	
		Velocity (ft/sec)	Temperature (°F)
1	1:40:03	22.408	96.5
2	6:24:09	21.752	79.2
3	1:46:22	22.178	95.4
4	4:52:03	21.916	81.6

Report Number:0192WS025E*

## **Appendix A**

### **User Manual / Labels**

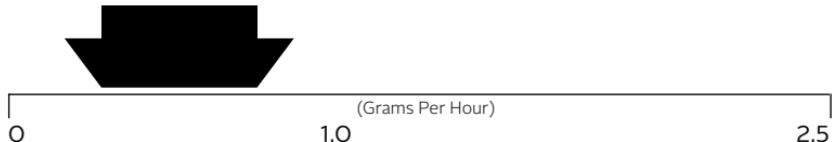

Manufactured by: Morsø  
Model: zB Standard 2020

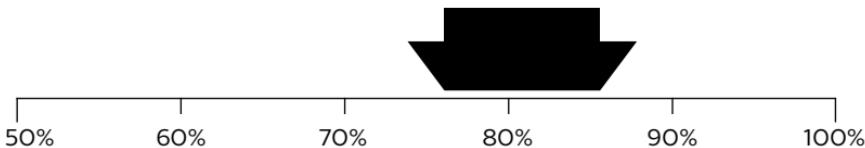

U.S. ENVIRONMENTAL PROTECTION AGENCY

Certified to comply with 2020 particulate emission standards using cord wood.

**SMOKE**  
THIS MODEL

**EFFICIENCY**

Particulate emission using ASTM E3053-17 cordwood test method:

**Emission**  
**0.55 g/h**

Wood heaters with higher efficiencies cost less to operate.

**HEAT OUTPUT**  
**6,959 to 25,299 Btu/Hr**

Use this to choose the right size appliance for your needs.  
ASK DEALER FOR HELP

This wood heater needs periodic inspection and repair for proper operation. Consult the owner's manual for further information. It is against federal regulations to operate this wood heater in a manner inconsistent with the operating instructions in the owner's manual.

By appointment to The Royal Danish Court

## Enjoy your new Morsø stove!

We congratulate you on your choice of a Morsø stove. Morsø has been producing some of the world's best stoves since 1853. If you follow this installation- and operating instruction carefully, we can assure you many years of warmth and pleasure.

### Contents

	<b>Installation of your Morsø stove</b>	<b>Page no.</b>

Read this entire manual before you install and use your new room heater. If this room heater is not properly installed, a house fire may result. To reduce the risk of fire, follow the installation instructions. Failure to follow instructions may result in property damage, bodily injury, or even death.

Contact local building officials about restrictions and installation inspection requirements in your area.

Save these instructions

### Optional Accessories

A wide range of accessories (such as handling gloves, fireside tools, glass cleaner and heat-proof paint) are available for use with your Morsø stove. They help with day-to-day running and maintenance. Contact your Morsø dealer for more information.

The Morsø 2B Standard 2020 have been tested by OMNI-Test Laboratories, Inc. The test standards are UL-1482-2012 (R2015) for the United States and ULC-S627-00 for Canada.

**The stove is listed for burning wood only. Do not burn other fuels.**

U.S. ENVIRONMENTAL PROTECTION AGENCY. Certified to comply with 2020 particulate emission standards using cord wood.

Average particulate emission using ASTM E3053-17 cord wood test method is 0.55 g/h Under specific test conditions this heater has been shown to deliver heat at rates ranging from 6,959 to 25,299 Btu/hr.

This appliance was determined to have an average higher heating efficiency value of 80.2% when tested in accordance with CSA B415.1

This wood heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual.

We suggest that our woodburning hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Woodburning Specialists or who are certified in Canada by Wood Energy Technical Training (WETT).

### Cast iron

Cast iron is a live material. There are no two ovens that are identical. This is partly due to the tolerances of the casting process, partly because the ovens are a work of craftsmanship. Minor unevennesses may also occur in the cast iron surface.

## 1.0 Installation of your Morsø stove

Installation of woodburning stoves must be safe and legal.

If your Morsø stove is not installed correctly, it may cause a house fire. To reduce the risk of fire, the installation instructions must be followed carefully. Contact the local building officials about restrictions and installation inspection in your area.

Before you start installing your stove, make sure that:

- The stove and chimney connection are placed far enough from combustible materials to meet all clearance requirements.
- The floor protection must be adequate and must be made correctly according to 'the requirements.

All necessary approvals are needed from the local building officials.

The data plate, which is located on the back of the stove, provides information regarding safety testing information, name of certified testing laboratory, and installation requirements.

Installation requirements vary in different districts, and the local building officials have the final authorization to approve your installation. You should discuss the installation with them before beginning. Please ask your dealer for further information.

**Do not connect to any air distribution duct or system.**

**Important: If the installation instructions are not followed carefully, it may cause dangerous situations like chimney - and house fires. Follow the instructions carefully and do not deviate from them as it may cause injuries to people or property.**

### 1.1 Unpacking the stove

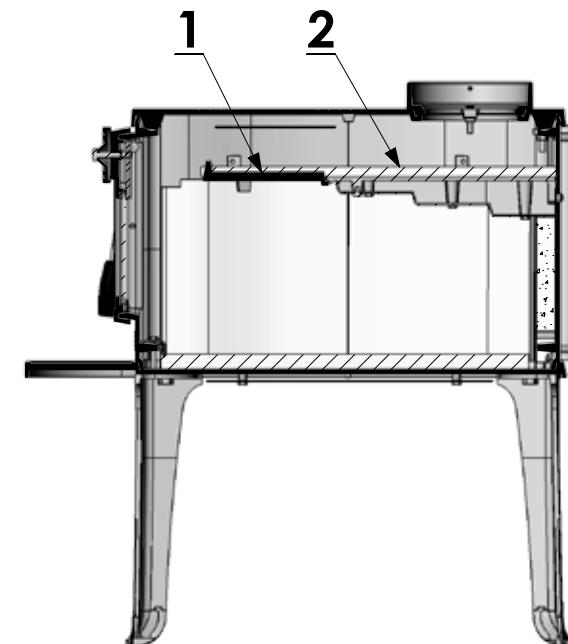

2B Standard: After removing the outer packaging, flatten it and lay onto the floor close to the stove; this can then act as protective work surface during the assembly process.

Next, remove the legs and bolts from inside the stove. Gently lay the stove onto its back and unscrew it from the wooden pallet. Using the bolts supplied, now screw the legs into position on the underside of the base. The stove should now be lifted and moved into the upright position, avoiding excess load on the back legs. Do not use the bolts used for securing the fire chamber to the wooden pallet.

### 1.2 Checking loose parts in the stove

After unpacking, check that the fire bricks are firmly in position and have not shifted in transit. Check also that the air control works freely.

Before starting the initial fire, make sure that the baffle (1) and insulation (2) over the baffle are placed correctly, as shown on the images below.

## How to fit the Vertical Baffle

Lead the vertical baffle through the door as shown below (picture 1 & 2). Place the baffle into the right position (picture 3 & 4). The baffle insulation is placed on the baffle.

## Standard Accessories

A Morsø glove and ceramic flue connection gasket are standard accessories that usually can be found in the ashpan or firebox area.

## 1.3 The chimney / flue system

Note that the flue system must be independently secured and must not rely on the stove for support.

The stove must not be connected to a chimney flue serving any other appliance.  
(Several flues may run up a single chimney stack; use one flueway per appliance).

Use a residential type masonry or listed type HT factory-built chimney.

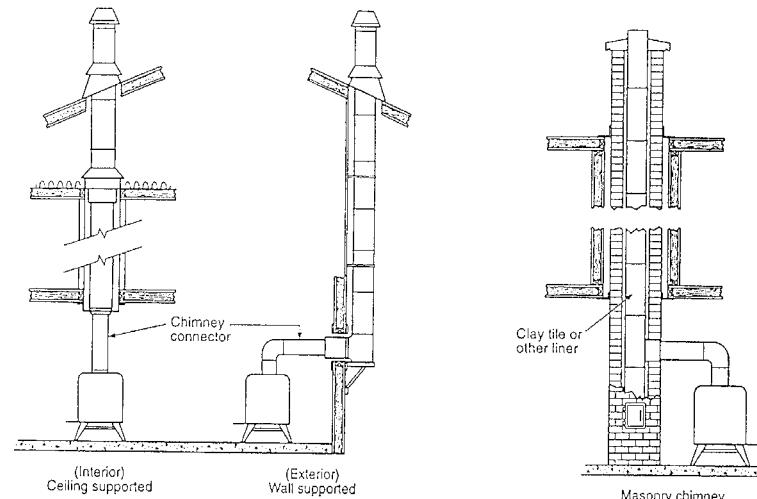

High Temperature (H.T.) Chimney Standard UL-103-1985 (2100° F.) or a code-approved masonry chimney with flue liner for the USA, and High Temperature (650°C) Standard ULC S-62g for Canada.

The internal dimensions of the chimney connector and chimney must not be less than 6 inches diameter (or equivalent cross section), and should not be significantly larger than this. Too large a section will tend to allow the flue gases to cool excessively, causing sluggishness or unpredictability in the stove's performance.

We recommend the length of the chimney system should be at least 16 feet (not required) above the stove in normal domestic situations, measured from the flue collar to the top of the chimney.

Local conditions like for example - roof constructions, large trees nearby and high altitude, may influence the chimney draft and height. Therefore, contact the local professional chimney sweep or your Morsø dealer.

### Typical Factory-Built or Masonry Chimney Installations

## 1.4 Flue Connection

A flue collar is placed in the firebox area.

Use a 24 MSG black or blue chimney connector or listed double wall chimney connector. Refer to local codes and the chimney manufacturer's instructions for precautions required for passing a chimney through a combustible wall or ceiling. Remember to secure the chimney connector with a minimum of three screws to the product and to each adjoining section. Position the stove and connect to the flue system.

**Wear gloves and protective eyewear when drilling, cutting or joining sections of chimney connector.**

## 1.5 Connection to the existing chimney

A chimney connector is the double-wall or single-wall pipe that connects the stove to the chimney. The chimney itself is the masonry or prefabricated structure that encloses the flue. Chimney connectors are used only to connect the stove to the chimney.

Double-wall connectors must be tested and listed for use with solid-fuel burning appliances. Single-wall connectors should be made of 24 gauge or heavier gauge steel. Do not use galvanized connector; it cannot withstand the high-temperatures that smoke and exhaust gases can reach, and may release toxic fumes under high heat. The connector must be 6 inches (150mm) in diameter.

**If possible, do not pass the chimney connector through a combustible wall or ceiling. If passage through a combustible wall is unavoidable, refer to the sections on Wall Pass-Throughs. Do not pass the connector through an attic, a closet or similar concealed space when installing the chimney connectors.**

It is important to keep the flue gases moving smoothly in the right direction. Do not vent into a large void at this location; rather form one continuous section all the way up. Use mild bends (e.g. 45° vs. 90°) rather than sharp angles where a change of direction is required. All parts of the venting must be accessible for cleaning purposes.

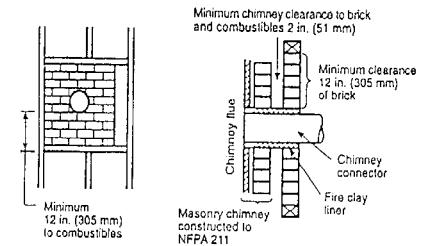

In horizontal runs of chimney, maintain a distance of 18 inches from the ceiling. Keep it as short and direct as possible, with no more than two 90 degree turns. Slope horizontal runs of connector upward 1/4 inch per foot (20 mm per metre) going from the stove toward the chimney. The recommended maximum length of a horizontal run is 3 feet (1 metre), and the total length should be no longer than 8 feet (2.5 metres).

Information on assembling and installing connectors is provided by the manufacturer's instructions exactly as you assemble the connector and attach it to the stove and chimney.

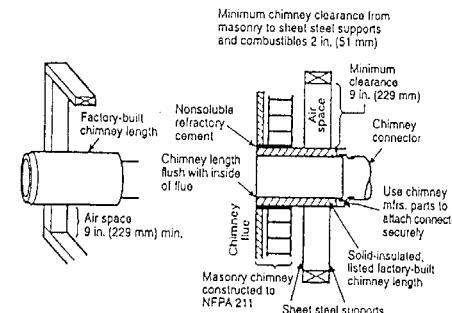

**Be sure the installed stove and chimney connector are correct distances from near by combustible materials. See the clearance paragraph page 11.**

Where passage through a wall or partition of combustible construction is desired, the installation shall conform to CAN/CSA-B365.

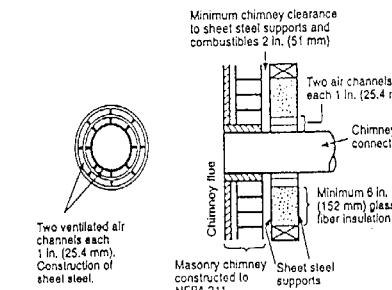

## Chimney Connector Systems and Clearances from Combustible Walls for Residential Heating Appliances

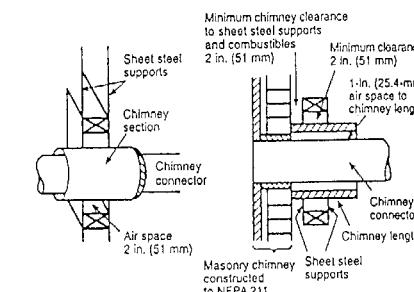

- A Minimum 3.5-in thick brick masonry all framed into combustible wall with a minimum of 12-in brick separation from clay liner to combustibles. The fireclay liner shall run from outer surface of brick wall to, but not beyond, the inner surface of chimney flue liner and shall be firmly cemented in place.

- B Solid-insulated, listed factory-built chimney length of the same inside diameter as the chimney connector and having 1-in. or more of insulation with a minimum 9-in. air space between the outer wall of the chimney length and combustibles.

- C Sheet steel chimney connector, minimum 24 gauge in thickness, with a ventilated thimble, minimum 24 gauge in thickness, having two 1-in. air channels, separated from combustibles by a minimum of 6-in. of glass fiber insulation. Opening shall be covered, and thimble supported with a sheet steel support, minimum 24 gauge in thickness.

- D Solid insulated, listed factory-built chimney length with an inside diameter 2-in. larger than the chimney connector and having 1-in. or more of insulation, serving as a pass-through for a single wall sheet steel chimney connector of minimum 24 gauge thickness, with a minimum 2-in. air space between the outer wall of chimney section and combustibles. Minimum length of chimney section shall be 12-in. chimney section spaced 1-in. away from connector using sheet steel support plates on both ends of chimney section. Opening shall be covered, and chimney section supported on both sides with sheet steel supports securely fastened to wall surfaces of minimum 24 gauge thickness. Fasteners used to secure chimney section shall not penetrate chimney flue liner.

## 1.6 Positioning the stove

### Distance to walls and lintel

When the stove is positioned near combustible materials, observe all current local and national building regulations with regards to clearances. Whatever regulations apply to your area, do not in any case install the stove within 8 inches of combustible materials around the sides or 16 inches above the top of the stove (fireplace installations require greater clearances above the stove - see below in the clearance chart). These distances may need to be increased if the materials are sensitive to heat. Note also that wall paper and other decorative materials may become detached with the effects of heat and care should be taken to ensure that they do not fall towards the stove in such an event.

When the stove is positioned near non-combustible materials, a gap of 4 inches or more is recommended for cleaning purposes and to ensure that heat circulates around the stove and out into the room.

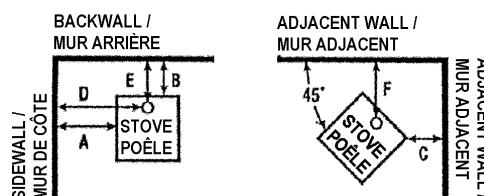

### Clearance requirements for 2B Standard without shields (Singlewall connector)

CLEARANCE REQUIREMENTS	STANDARD RESIDENTIAL INSTALLATION (SINGLEWALL CONNECTOR)	
	USA	CANADA
A. Sidewall to unit	26"	26" (660 mm)
B. Backwall to unit	16"	16" (406 mm)
C. Cornerwall to unit	16"	16" (406 mm)
D. Sidewall to connector	29"	29" (737 mm)
E. Backwall to connector	18"	18" (457 mm)
F. Cornerwall to connector	19"	19" (483 mm)
G. Unit to ceiling	-	-
H. Floor to ceiling	-	-

### Clearance requirements for 2B Standard with Convection shields (Singlewall connector)

CLEARANCE REQUIREMENTS	STANDARD RESIDENTIAL INSTALLATION (SINGLEWALL CONNECTOR)	
	USA	CANADA
A. Sidewall to unit	26"	26" (660 mm)
B. Backwall to unit	16"	16" (406 mm)
C. Cornerwall to unit	16"	16" (406 mm)
D. Sidewall to connector	26"	26" (660 mm)
E. Backwall to connector	23"	23" (583 mm)
F. Cornerwall to connector	19"	19" (483 mm)
G. Unit to ceiling	-	-
H. Floor to ceiling	-	-

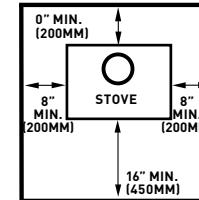

### MINIMUM CLEARANCES TO COMBUSTIBLES: DEGAGEMENTS MINIMAUX AUX MATERIAUX COMBUSTIBLES:

### Clearance requirements for 2B Standard with & without shields (Doublewall connector)

CLEARANCE REQUIREMENTS	STANDARD RESIDENTIAL INSTALLATION (DOUBLEWALL CONNECTOR)	
	USA	CANADA
A. Sidewall to unit	20"	20" (508 mm)
B. Backwall to unit	12"	12" (305 mm)
C. Cornerwall to unit	16"	16" (406 mm)
D. Sidewall to connector	26"	26" (660 mm)
E. Backwall to connector	14"	14" (356 mm)
F. Cornerwall to connector	19"	19" (483 mm)
G. Unit to ceiling	-	-
H. Floor to ceiling	-	-

### FLOOR PROTECTION REQUIREMENTS

FLOOR PROTECTOR MUST BE NON-COMBUSTIBLE MATERIAL. IT MUST EXTEND BENEATH HEATER, AND TO THE FRONT / SIDES / REAR AS INDICATED

Floor protection requirements	Non-combustible materials beneath stove	
	USA	Canada
A. Extending distance, back	-	200 mm
B. Extending distance, right side	6"	200 mm
C. Extending distance, left side	6"	200 mm
D. Extending distance, front	16"	450 mm

In the US, floor protection must be constructed of a non-combustible material and installed to extend beneath the heater and 16" to the front and 8" to the sides of the fuel loading door and ash removal openings. In Canada, floor protection must be constructed of a non-combustible material and installed to extend beneath the heater and 450 mm.(16") to any side with a door and 200 mm.(8") beyond the appliance on the other sides.

### **Distance to furniture**

The recommended minimum distance from stove to furniture is 30 inches. Note that some furniture is more easily affected by heat and may need to be moved to a greater distance. This is your responsibility.

In addition other combustible materials, away from the stove. In general, a distance of 30 inches must be maintained between the stove and moveable combustible item such as drying clothes, newspapers, firewood etc.

### **DO NOT INSTALL IN A MOBILE HOME**

#### **Note:**

#### **Acid Protection**

If acid-washing the masonry around the stove, protect the stove surface with an acid-proof cover.

#### **Fresh Air Inlet**

Unless there is deemed to be sufficient ambient leakage of air into the room via doorways, windows and the like, a dedicated fresh air inlet will be needed. This inlet should have 2 square inches (1250 square mm) of free air space. This is particularly important where the room is well sealed, or where an extractor hood or ventilation system disturbs the natural air pressure. Such an inlet should not be on a wall that is usually subject to negative pressure from normal wind pattern. Avoid placing the inlet directly across the room from the stove, thus causing a cold air draft.

## **2.0 Operation**

### **2.1 Before you start firing**

**For use with solid wood fuel only. Do not overfire, if heater or chimney connector glows you are overfiring. Inspect and clean chimney frequently. Under certain conditions of use creosote buildup may occur rapidly. Because of risk of smoke and flame spillage, operate only with door fully closed.**

#### **CAUTION:**

**Hot while in operation. Keep children, clothing and furniture away. Contact may cause skin burns.**

**DO NOT USE CHEMICALS OR FLUIDS TO START THE FIRE**

**DO NOT BURN GARBAGE OR FLAMMABLE FLUIDS**

**DO NOT USE A GRATE, ANDIRONS, OR OTHER WAYS OF ELEVATING THE FIRE - BUILD FIRE DIRECTLY ON HEARTH.**

**DO NOT USE GASOLINE, GASOLINE-TYPE LANTERN FUEL, KEROSENE, CHARCOAL LIGHTER OR FLUID OR SIMILAR LIQUIDS TO START OR FRESHEN UP A FIRE IN THIS HEATER. KEEP ALL SUCH LIQUIDS AWAY FROM THE HEATER WHILE IT IS IN USE**

#### **Choosing your fuel**

All types of natural wood can be burned on your stove, but they must be well-seasoned and dry. Once the wood is cut to length, it should be split down middle - to suit the dimensions given below - to allow moisture to evaporate. Cut the wood to a length of max 12 inches (30 cm) and approx. 3 to 3.5 inches (7-8 cm) in section. If you can weigh your wood, aim for around 2 lbs. For correct combustion and heat output, wood fuel should contain no more than 20% moisture; this can easily be checked by using the Morsø Moisture Meter (part # 62929900).

To naturally season wood fuel, stack and store it under cover in an airy location where fresh air can move through each piece. Some soft woods may take as little as one good summer to season whereas harder woods such as oak, maple, and elm may require seasoning up to 18 months. Avoid overly dry wood that is gray in color as under certain conditions it can cause performance problems, such as back-puffing and sluggishness. Well seasoned wood will be light to hold and will show signs of cracking from the center-out in the ends. If your wood spits or sizzles when burnt, and your stove's door glass persistently mists up, your wood is not properly seasoned. Never use drift wood (from the sea), whose salt content may cause corrosion, nor construction wood that may have been impregnated with chemicals.

#### **To optimize efficiency:**

**Burning wet wood has a negative impact on efficiency**

**CAUTION Do not place fuel within the installation clearances for the stove or within the space required for loading fuel and ash removal.**

#### **Starting the First Fire**

The initial fire should be small, so that the stove paint can cure and the main plates of the stove can settle into position. Some fumes will be given off by the paint. Ventilate the room during this phase.

The setting of the air control, lighting techniques and loading intervals will depend on chimney draft, the fuel used, the heat required and so on. Some basic techniques are outlined below.

## In principle

Your stove is fitted with Primary and Secondary air inlets.

Primary Air is controlled using the spinner on the door. Open the spinner will allow a supply of preheated air to enter the firebox via the 'airwash' system situated inside the stove and above the glass.

The secondary air is injected into the flue gases above the fire resulting in a cleaner, more efficient combustion process. The supply of secondary air is fixed open and is not adjustable.

For extra safety, your stove has been fitted with a removable handle on the frontdoor.

## 2.2 Lighting and loading intervals

When first lighting the stove, a large volume of air is needed. When the stove is cold, you should leave the door open an inch or two for the first few minutes and open the primary air supply completely. While the door is open, do not leave the stove unattended.

To form a reasonable bed of ash on the floor of the stove, you should use 2-4 pounds of dry kindling at the initial lighting. If possible, maintain a 1-1.5 inch (2-3 cm) layer of ash on the floor of the combustion chamber for added insulation.

1. We recommend using the "top-down" method to light your wood-burning stove. It is the most environmentally-friendly method of lighting. Use two firelighters and approx. 2-4 lbs of dry kindling sticks to quickly create a glowing layer of wood. Place the firelighters directly under the top layer of kindling sticks. This minimizes soot formation on the glass. Soot formation on the glass is often caused by too vigorous burning in contact with cold surfaces. If you avoid the formation of soot when lighting the fire and build up a layer of hot embers, you will have minimal soot formation when getting the fire burning again later.

2. The air supply must be fully open.

3. Light the fire.

4. After lighting, partially close the door, leaving it open an inch or two to allow in plenty of combustion air.

4. When the chimney is warm after about 5-10 minutes, the frontdoor should be closed. A suitable layer of ember will be formed after about 15-20 minutes.

5. When ready to reload, use a poker to spread the ember across the firebox floor, bringing plenty towards the front of the stove.

6. Refuelling of your stove should be done while there are still glowing embers in the bed. Spread the embers across the bottom, but concentrated mostly towards the front of the stove. We recommend using fuel load with a weight of 4 lbs (2 pieces) and up to 7 lbs (5 pieces).

**Always keep the fuel load beneath the lowest secondary air nozzles. The space in front of and above the lowest air nozzles is reserved for volatile gas combustion only.**

When refuelling your stove, it is recommended that you open the stove door gently for the first 1-2", then wait for a few seconds for the pressure in the flue to equalise; you are now safe to proceed and open it all the way. By using this technique smoke spillage can be eliminated particularly in poor chimney draft conditions. The stove door should not be opened when the stove is being fired vigorously.

7. Close the frontdoor. Leave the primary air supply fully open. The new fuel will ignite in a minute or two

8. After a few minutes, adjust the primary air supply to suit your heating requirements.

9. For refueling, add a layer of wood while there are still plenty of live embers. Repeat steps 5-8.

**This wood heater has a manufacturer-set minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this wood heater in a manner inconsistent with operating instructions in this manual.**

**Warning: Fireplace stoves must never be left unattended with the door open. If the door is left partly open, gas and flame may be drawn out of the fireplace stove opening, creating risks from both fire and smoke. We recommend that you fit a smoke detector in the room where the stove is installed.**

**DO NOT OVERFIRE THIS HEATER. Overfiring may cause a house fire, or can result in permanent damage to the stove. If any part of the stove glows, you are overfiring.**

The maximum recommended weight of wood fuel per load is 3.5 kg/7 lbs (approx 5 split logs).

Under normal firing, the average flue temperature in the stove pipe, measured 20 cm above the stove, is approx. 300° C (550°F). The maximum flue temperature in the stove pipe must not exceed 450° C (750°F). If the flue temperature exceeds 450°C (750°F), it is considered as over firing and may cause premature wear and tear of the stove.

To help gauge the correct running temperature of your stove, we recommend you use the Morsø Flue Gas Thermometer (part No. 62901200). The Flue Gas Thermometer magnetically attaches onto the stove pipe approx 20 cm (8") above the stove's top plate and measures the surface temperature of the stove pipe. Please see your authorized Morsø Dealer for availability.

#### Draft conditions

If smoke or fumes come out of your stove when lighting up and reloading, or if the fire simply will not respond, a poor draft is almost certainly to blame. (In a very few cases, there may be insufficient fresh air getting into the room - see installation advice above). Take advice from your stove supplier on how best to upgrade your flue system to improve draft.

#### Rules of woodburning

If you want less heat, put fewer logs on the stove and reduce the amount of air. It is still important to maintain a good layer of embers.

Less heat - less wood - less air

Greater heat - more wood - more air

Soot deposits will settle on the glass if the stove is run too slowly or if your wood is not well seasoned.

#### Carbon monoxide detectors

It is required in some jurisdictions to install smoke and carbon monoxide detectors where heaters are installed. Install at least one smoke detector on each floor of your home to ensure your safety. It should be located away from the wood appliance and close to the sleeping areas. Locating a smoke detector too close to a wood appliance can cause the smoke detector alarm to sound if a puff of smoke is emitted while the wood appliance door is open during reloading. Follow the smoke detector manufacturers placement, installation, and maintenance instructions

## 3.0 Maintenance

When performing maintenance on your stove, always protect yourself, using safety goggles and gloves

### 3.1 Exterior Maintenance

The stove surface is painted with heat-resistant Senotherm paint. It is best kept clean by vacuuming with a soft brush attachment or by wiping with a lint-free cloth.

Over a period of time, the painted surface may become slightly grey. A can of Morsø touch-up spray paint should be available from your stove supplier. This can be applied - in accordance with the instructions - in just a few minutes. When first firing after touching up, the stove will give off a slight smell as the paint cures. Make sure to ventilate the room well during this phase.

### 3.2 Internal maintenance

#### Glass

If the stove is generally run at the correct temperatures, there should be little or no dirt on the glass. If dirt does settle during lighting, most will burn off as temperatures increase. For heavier deposits that will not burn off, use Morsø glass cleaner, applied when the glass is cold, in accordance with the instructions. Never use abrasive cleaners on the glass surface.

#### Reasons for dirty glass

- Fuel too wet
- Logs too large or not split
- Combustion temperatures too low

**Do not clean the glass while hot  
Replace broken glass immediately.**

**Do not operate your stove if the glass in the door is damaged.**

If you need to replace the glass, it should be replaced with the high temperature ceramic glass supplied by Morsø, contact your Morsø dealer.

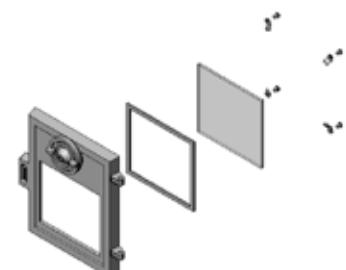

#### Installing the glass

Never install the glass when the stove is in function.

#### Ceramic glass replacement

Ceramic glass cannot be recycled because it has a higher melting point than ordinary glass. If ceramic glass is mixed with ordinary glass, the raw material is spoiled, and the reclaiming process may be halted. Take care that the ovenproof glass does not end up among ordinary recycled waste. That will be a great benefit to the environment.

Note: Should be handed in to a recycling station as ceramic glass.

1. Lift the door off the hinges and place it face down on a sheet of cardboard or other non-abrasive fabric.
2. Unscrew the 4 bolts that secure the glass. (In the event that a bolt sheers off when being unscrewed, remove the remaining body of the bolt by drilling down its centre with 1/8 inch high speed steel drill bit. Smaller drill bits may be successful, but do not use a larger bit. Make sure the bit stays away from the edges of the bolt - this may damage the thread in the cast iron).
3. Remove the old ceramic gaskets and clean up the surface underneath with wire wool or emery paper to remove loose particles.
4. Place the new gasket material in position around the perimeter of the window area, making sure to pinch them to the length in such a way that they make a continuous seal. Leave no gaps.
5. Place the new glass in position on the strips and screw home the fresh bolts and fitting by hand.
6. Finally, give each of the bolts an extra half turn or so. The glass should hold tight enough by that cleaning will not dislodge it. Do not over-tighten the bolts as this may put excessive pressure on the glass, resulting in cracking - important!

**To reduce the risk of breaking the glass, avoid striking the glass or slamming the door.**

#### **Internal service parts**

The flame-path equipment - consisting of the ashpan, grate, firebricks, Cast iron fire plates, glass, baffle and flue collar - are subject to the extremes of heat produced by the fire. From time to time, one or other of these parts may need replacing as a matter of routine maintenance.

#### **Stone replacement**

When replacing the stones, unscrew at the rear of the stove the heat reflector, which is mounted with 4 screws. This provides access to the 2 bolts that hold the smoke baffle in place. Remove these bolts so that the smoke baffle inside the stove can be raised. Raise the smoke baffle so that the old stones can be removed from the stove and the new ones can be installed. The side stones are placed in the grooves in the vermiculite bottom plate. Once the stones have been properly put into place, lower the smoke baffle down onto the stones and re-bolt it securely to the cast rear of the stove. Finally, reinstall the rear heat reflector with its 4 screws.

**NOTE: The flame-path equipment, the ceramic rope and the paint finish are not covered by guarantee.**

All of these service parts can be bought from your Morsø dealer, and we recommend that damaged parts are replaced as soon as possible to avoid collateral damage. Should the baffle be distorted by an overfire, the stove will still function, although its efficiency may be compromised. Replace it as soon as possible.

#### **Reasons for fast internal wear and tear**

- Persistent heavy firing
- Soot and ashes left to accumulate

#### **Gasket**

The gasket around the perimeter of the door may harden over a period of time. It should be replaced if it becomes difficult to close the doors or if air starts to leak in around the perimeter of the doors, causing the fire to become a little less controllable. A Morsø rope gasket kit is available from your stove supplier.

#### **3.3 Cleaning the Stove and the Flue**

Check for soot above the baffle plate and around the flue outlet every month or so to start with. If the stove suddenly becomes sluggish, check for a soot fall around the flue collar or in the flue/chimney.

**The chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire.**

Clean the flue/chimney - all the way from the stove to the flue terminal point above the house. A good routine is to clean the flue after each heating season in any case, and inspect prior to the season to ensure that bird's nests or other blockages have not occurred during the off season.

#### **Ash disposal**

Empty the ashpan on a daily basis or as needed. Ash allowed to build up towards the underside of the grate will trap heat and could cause premature failure of the grate.

#### **Empty the ashpan according to this procedure:**

Open the front door, and use a shovel.

Dispose the ash in a metal container with a tight fitting lid. The closed container of ashes should be placed on a noncombustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have thoroughly cooled.

#### **Caution:**

**Never empty a stove in operation.**

**Never use your household or shop vacuum cleaner to remove ash from the stove; always remove and dispose of the ash properly.**

#### **Creosote - formation and need for removal**

When wood is burned slowly, it produces tar and other organic vapors, which combine with expelled moisture to form creosote. The creosote vapors condense in the relatively cool chimney flue of a slow-burning fire. As a result, creosote residue accumulates on the flue lining. When ignited this creosote makes an extremely hot fire. When burning wood, the chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire.

### **Chimney sweeping**

Inspect the system regularly during the heating season as part of a regular maintenance schedule. To inspect the chimney, let the stove cool completely. Then, using a mirror, sight up through the flue collar into the chimney flue. If you cannot inspect the flue system in this fashion, the stove must be disconnected to provide better viewing access.

Clean the chimney using a brush the same size and shape as the flue liner. Run the brush up and down the liner, causing any deposits to fall to the bottom of the chimney where they can be removed through the clean-out door.

Clean the chimney connector disconnecting the sections, taking them outside, and removing any deposits with a stiff wire brush. Reinstall the connector sections after cleaning, being sure to secure the joints between individual sections with sheet metal screws.

If you cannot inspect or clean the chimney yourself, contact your local Morsø Dealer or a professional chimney sweep.

### **If you do experience a chimney fire, act promptly and:**

1. Close the air control.
2. Get everyone out of the house.
3. Call the Fire Department.

### **Annual maintenance**

Before the heating season, perform a thorough cleaning, inspection and repair:

Thoroughly clean the chimney and chimney connector.

Inspect the chimney for damage and deterioration. Replace weak sections of prefabricated chimney. Have a mason make repairs to a masonry chimney.

Inspect the chimney connector and replace any damaged sections.

Check gasketing for wear or compression, and replace if necessary.

Check the glass for cracking; replace if needed.

Check door and handle for tightness. Adjust if needed.

### **ALWAYS USE ORIGINAL MORSØ SPAREPARTS**

## **3.4 Leaving the stove for extended periods**

Important:

If the stove is to be left unused for any period of time, clean it out thoroughly and leave the air control slightly open to allow airflow. Make sure that the flue does not allow rainwater to come anywhere near the stove; install a chimney cap, but do not block off the flue completely.

These measures should ensure there is a slight movement of air through the stove, and that the body of the stove remains dry, right into the corners.

Any ash left within an unfired stove can attract moisture like blotting paper. If moisture is allowed to settle within the stove, rust will form. Rust expands as it takes a grip. This can lead to undue pressure on the stove joints, and this in turn may result in damage to the stove.

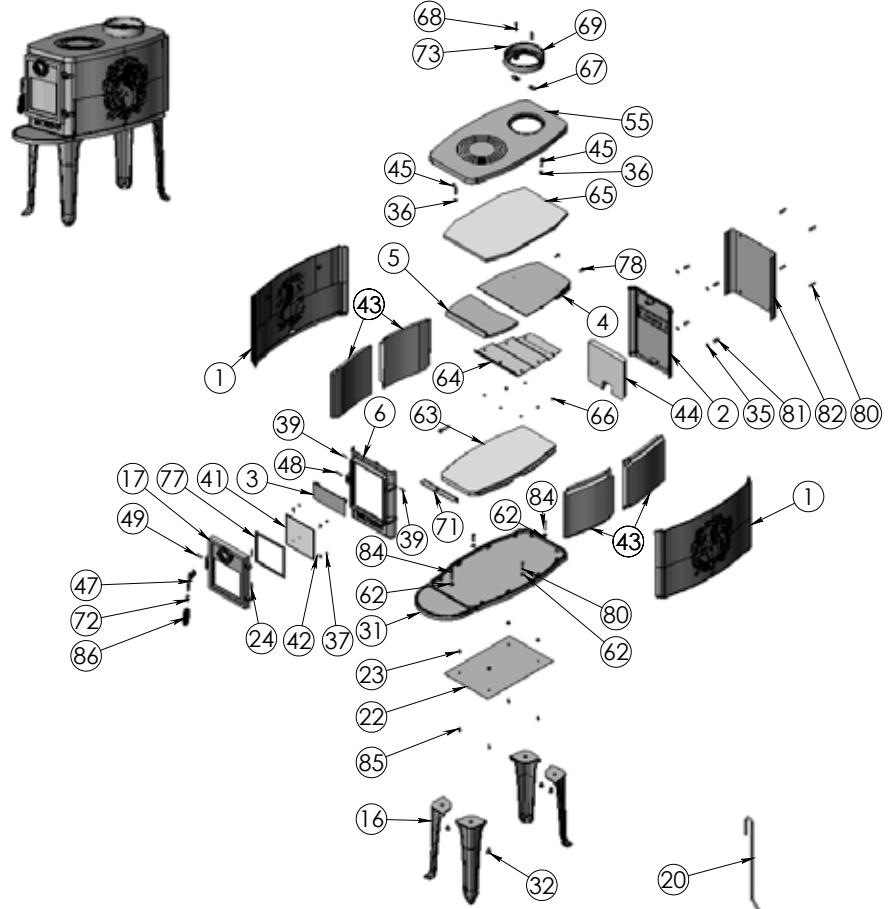

**NOTE: It is best to thoroughly clean the stove after the heating season has concluded. Adding a dessicant, such as kitter litter, into the ash pan helps absorb moisture during the summer months. Be sure to remove this prior to the heating season.**

### **Thank you for buying a morsø stove.**

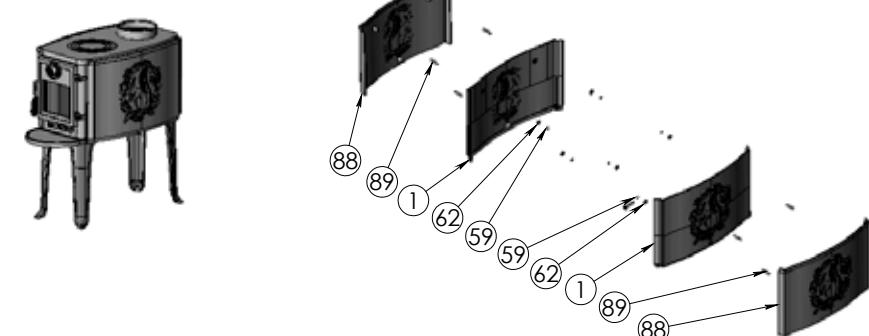

We hope you have many years of carefree warmth in its company. Some initial experimentation with loading and running techniques will decide your normal routine. If you have any problems after this short learning phase, please refer to your stove dealer. Should they be unable to help for any reason, please contact us in writing at the address on the front of this publication.

## Guarantee Product Registration

### MORSØ 10 YEAR GUARANTEE CERTIFICATE

Behind every Morsø stove is more than 160 years of dedicated stove design and manufacturing experience. Quality control has always been at the heart of the production process and detailed measures have been put into place at all key stages of the build. Accordingly, provided that the stove has been supplied by an authorised Morsø dealer, Morsø will offer a 10-Year Manufacturers Guarantee against manufacturing defect to any of the main exterior body parts of its stoves.

Read more about "Morsø 10 years guarantee/product registration card" and  
**REGISTER** your new Morsø stove online:  
<http://international.morsoe.com/warranty-registration>

# **IMPORTANT!**

## **How to heat safely for the environment and yourself!**

- Use only dry wood**

Use only dry (max. 20% moisture content) and untreated wood. The fuel must be split and 8 - 12 cm thick.

- Light**

Light with dry kindling (use 1 - 2 kg). Leave the door ajar and stay close to the stove during the lighting phase.

- Good layer of embers**

Be certain to have a good layer of embers before refilling. The wood should light within 2 minutes. If the logs do not ignite it may, in an extreme case, cause the flue gases to ignite which may pose a risk to material damage or personal injury.

- Refuelling**

When refuelling use 2 - 3 pieces of wood  
- no more than 2 - 2.5 kg.

- Ensure adequate air**

I.e. clear and yellow flames.

- Never burn overnight**

By appointment to The Royal Danish Court

**Product:** Wood heater type: Morsø 2B Standard 2020

**Sample:** Receipt at DTI, Aarhus: 3. February 2020

**Test period:** Date of testing: 5-6 February 2020

**Procedure** Testing of a wood heater in accordance with DTI method "ELAB-PP-BR-15" based on a relevant selection of standards and methods:

ASTM E2515-11	Yes
ASTM E3053-17 (Cordwood)	Yes
US EPA Method 28R in combination with ASTM E2780-10 (Cribwood)	No
CSA B415.1-10	Yes
EPA Communication on alternative method for Cordwood testing	Yes

**Result:** The stove/ meets the requirements of NSPS §40 CFR Part 60.

**Remarks:** See paragraph 2 - Remarks.

**Terms:** Accredited testing was carried out in compliance with international requirements, and the general terms and conditions of The Danish Technological Institute. The test results apply to the tested products only. This test report may be reproduced in extract only if the laboratory has approved the extract in writing. Danish Technological Institute is an EU Notified Body with identification number 1235 and DIN Certco test laboratory, PL 168.

## 1. Introduction

### 1.1. General

This report concerns testing of a free-standing cast iron wood heater, type Morsø 2B Standard 2020

There is a CBI version of the report holding all the 30 annexes. In the non-CBI report, annex 12 (DTI test procedure), annex 22 (Assembly drawings) and annex 23 (parts drawings are excluded). Please find the full list of annexes in chapter 13.

Figures are stated in European notation, with a comma as the decimal separator and period as the thousand's separator.

### 1.2. Scope of testing

The appliance was tested to demonstrate compliance with the NSPS 2020 limits, using the ASTM E3053 alternative Cordwood test method broadly accepted by the administrator. Please find the letter of acceptance enclosed in annex 1

### 1.3. Site

Testing was accomplished by Danish Technological Institute, Kongsvang Allé 29, DK-8000 Aarhus C, Denmark in accordance to DTI's accredited EPA test procedure ELAB-PP-BR-15 (CBI information).

The test procedure is amended in annex 12 to the CBI report variant, but left out in the non-CBI report variant

### 1.4. Participants

#### DTI staff

Testing in the laboratory was accomplished by:

- Jes Sig Andersen, Senior Specialist (lead)
- Kim Sig Andersen, Consultant (trainee)

#### Client staff

The test work was witnessed by:

- Frank Juel Nielsen, Morsø Jernstøberi A/S

### 1.5. Test specimen

The stove was manufactured by:

Company: Morsø Jernstøberi A/S  
Address: Furvej 6  
Postcode/town: DK-7900 Nykøbing Mors  
Country: Denmark

The stove weighs 62 kg.

The stove is not equipped with a catalyst. The landscape type of firebox is deeper than its wide, accommodation up to half a meter wood logs.

The effective firebox volume used for fuel load calculation is 0.01961 m<sup>3</sup> (0.6925 ft<sup>3</sup>)  
Please find the firebox dimensions in detail in the drawing 2B-143 amended I Annex 29

Variants: At the time of testing there was no known variants of the Morsø 2B Standard 2020 wood heater.

## 1.6. Description of the wood heater

**Wood Stove Model:** Morsø 2B Standard 2020

**Type:** Freestanding, radiation type cast iron wood heater.

**Appliance Manufacturer:** Morsø Jernstøberi A/S

**Wood Stove Model:** 2B Standard 2020

**Type:** Freestanding, radiant-type wood heater.

### WOOD HEATER DESCRIPTION

**Materials of Construction:** The unit is constructed primarily of cast iron with a stainless-steel secondary combustion air supplying baffle. The firebox is lined with molded vermiculite firebricks. The feed door has a 150 mm by 130 mm glass panel and an 8 mm diameter fiberglass gasket.

**Air Introduction System:** Primary combustion air enters the firebox through a spin-draft located at the front of the appliance at the top of the fuel-loading door. Secondary combustion air enters the appliance through the upper back and supplies a three-step, tiered hollow baffle.

**Combustion Control Mechanisms:** The combustion air inlet is controlled by a spin-draft located at the top of the fuel-loading door in the center of the appliance. Only the primary combustion air is adjustable, the secondary combustion air is fixed.

**Combustor:** N/A

**Internal Baffles:** A hollow, tiered baffle with a cast iron extension baffle is mounted in the upper portion of the firebox. The flame path is forced to the front of the firebox where it travels up through the opening between the baffle and primary air manifold. A ceramic wool blanket is employed on the top of the baffle.

**Other Features:** None

**Flue Outlet:** The 5" diameter flue outlet is located at the top end of the appliance, to the back.

**Firebox volume:** 0,0196082 m<sup>3</sup> or 0,692460 ft<sup>3</sup> calculated in SolidWorks CAD simulator. Please find the technical drawing 2B-143 showing details on the firebox dimensions amended in Annex 29

## 2. Aging prior to testing

The stove had been aged in excess of 50 hours of operation prior to the certification test, while pre-testing at Morsø.

Morsø 2B Standard 2020 pre-test conditioning

### 3. Summary of test results

#### 3.1. Test schedule

The full certification test comprises two HF test runs, one MF test run and one LF test run.

Date	Test I	Test II	Remarks
5-2-2020	HF test	LF test	Both valid tests
6-2-2020	HF test	MF test	Both valid tests

#### 3.2. Main results

Please see also the full set of test results in chapter 10

		Burn rate kg dry matter/hour	Emission grams/hour
#1	HF1 5-2	1,89	2,1854
#2	LF 5-2	0,48	0,1761
#3	HF2 6-2	1,74	1,8934
#4	MF	0,66	0,1681
	Weighted average		0,5455

#### 3.3. Summary of the CS+HF and LF tests the 05-02-2020

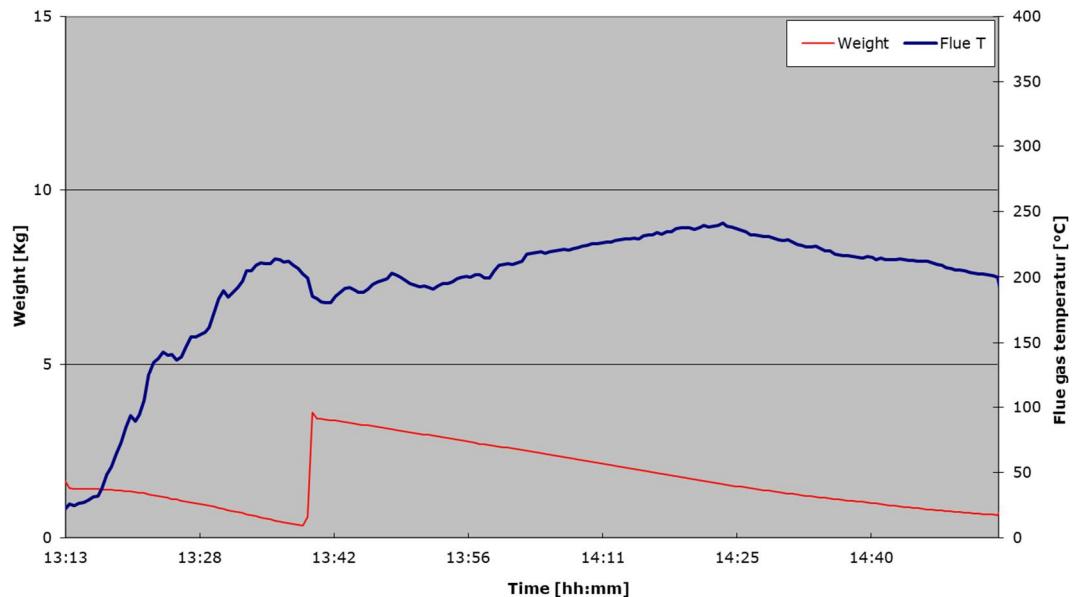

Data logger file Id: 2020-02-05\_08-39-41

13:13:45	Ignition of the Cold Start part test using the gas torch for 30 seconds. The air valve is set in position 100% open (full action 3 and one quarter revolution). 0.582 kg of kindling (10% moisture DB) and 0.814 kg start-up fuel (21.0% moisture DB) was entered
13:14:30	Ignition is over, the door is closed right away. The air valve is maintained in its fully open position
13:40:17	End of the Cold start at 350 grams of embers, which value is taken down. The embers are evened out
13:40:27	Start of High Fire test using 5 logs of 3,141 kg firewood (19.9% moisture DB)
13:41:07	End of loading time after 50 seconds.
13:41:10	The door was closed right away, and the air valve was maintained in its fully open position, being the High Fire setting allowing maximum air supply
14:13:45	Change of the filter holder arrangement in the split extraction train at the hour at gas meter reading 88867,6 normal litres
14:53:48	End of High Fire test cycle at 300 grams of embers (net), the combined bed of ember masses at the end of the High fire test was hence 350+300 = 650 g. The bed of embers was evened, and the air valve kept in its fully open position
14:53:50	Start of Low Fire test using 5 logs of in total 3.697 kg of firewood (21.1% moisture DB)
14:54:38	End of the loading time after 48 seconds, the door was closed right away
14:56:50	The air valve is throttled to its final LF position being three quarters of a revolution open
15:53:50	Change of the filter holder arrangement in the split extraction train at the hour at gas meter reading 89542,12 normal litres
21:17:59	The Low Fire test is over at platform scale reading 650 g
Post Check	The mass combusted during the last 30 minutes of the test was 712-650 = 62 g, thus rendering the LF test valid with respect to the fire out criteria of no less the 50 g combusted during half an hour.

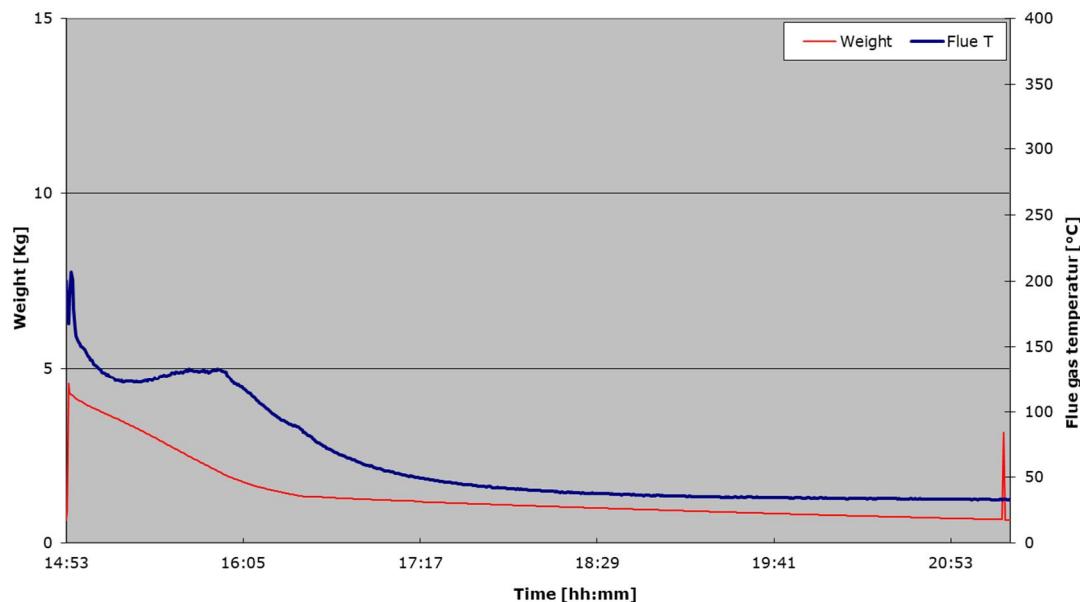

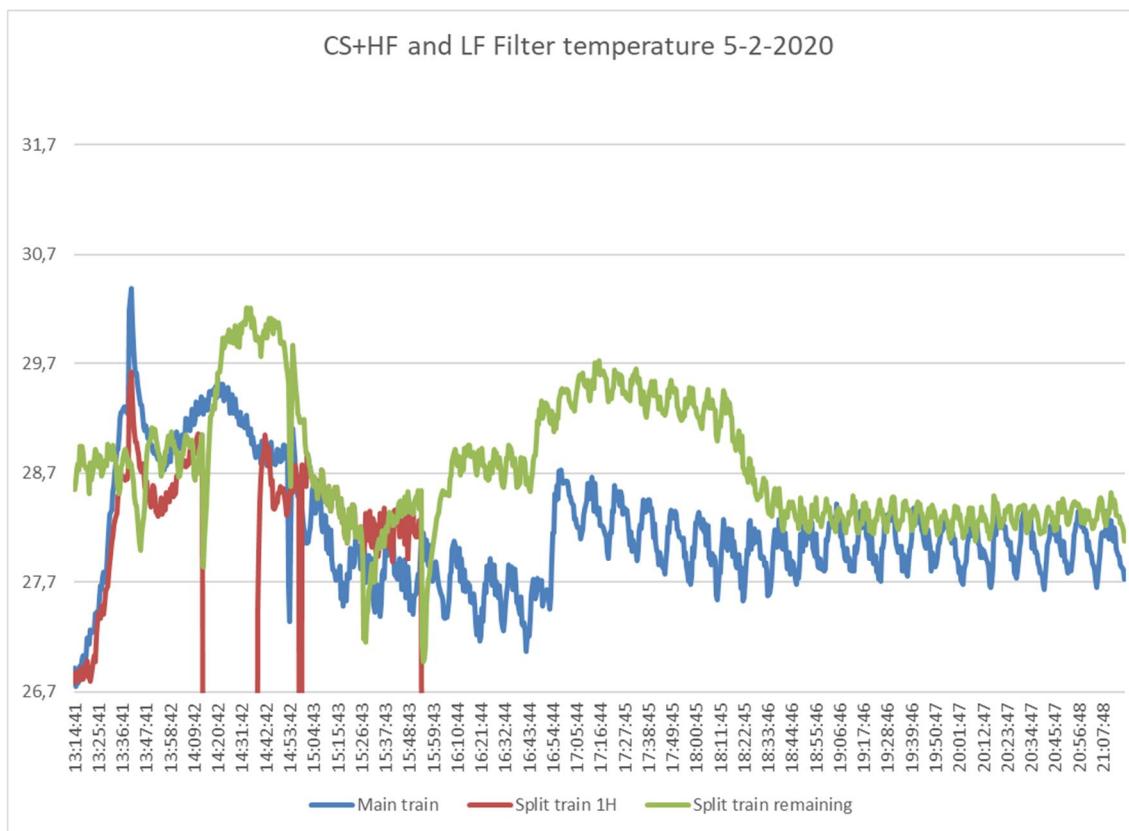

Please find the corresponding sequence of images in annex 3

High fire 1 test  
2020-02-05

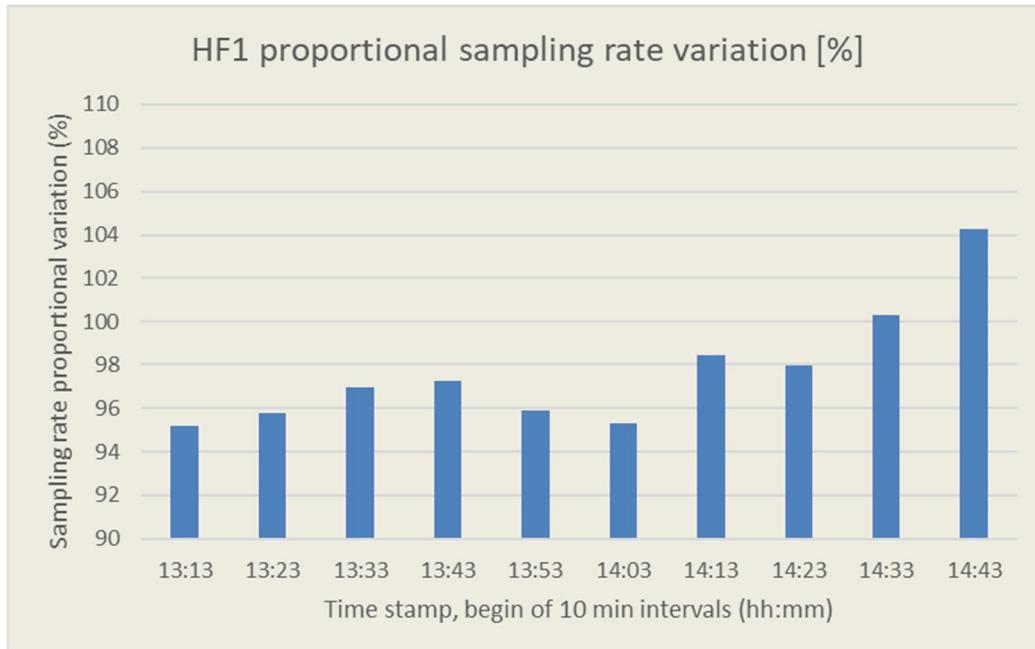

Low fire test  
2020-02-05

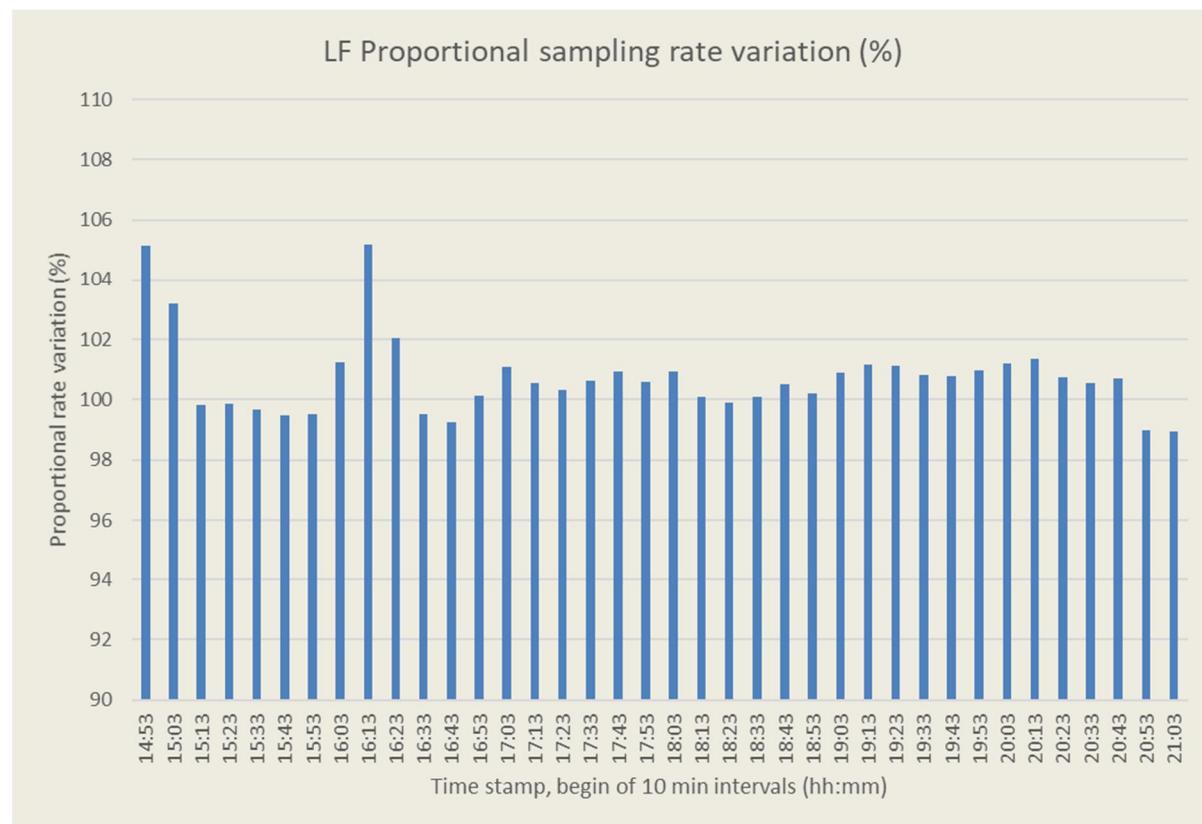

Evidence of filter temperature maintained in-between 26,7-32,2 °C (80-90 F) the 5<sup>th</sup> of February as per Alt-125 letter clause 1) requirement modifying ASTM E2515

HF1 (#1) proportional sampling rate variation as per ASTM E2515 clause 9.8.1

LF (#2) proportional sampling rate variation as per ASTM E2515 clause 9.8.1

Time	EPA Flue gas Temperature (°C)	Surface temperature Top (°C)	Surface temperature Rear (°C)	Surface temperature Right side (°C)	Surface temperature Left side (°C)	Surface temperature Bottom (°C)
13:13:41	21,77	23,14	25,32	24,27	25,40	23,40

Evidence of cold starting conditions on day one, the 5<sup>th</sup> of February 2020 to ASTM E3053 clause 8.5.1 (Ambient temp was 22,2 degr C at 13:13:45 hours)

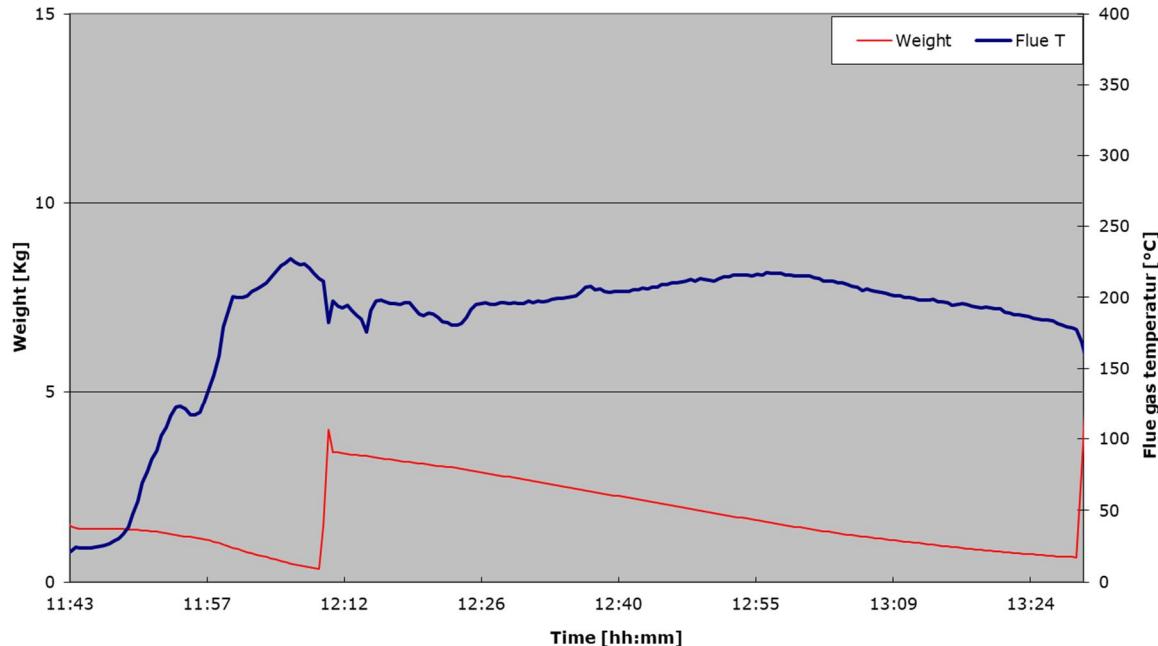

### 3.4. Summary of the CS+HF and MF tests the 06-02-2020

Data logger file Id: 2020-02-06\_08-50-50

11:43:13	Ignition of the Cold Start part test using the gas torch for 30 seconds. The air valve is set in position 100% open (full action 3 and one quarter revolution). 0.580 kg of kindling (10% moisture DB) and 0.812 kg start-up fuel (20.3% moisture DB) was entered
11:43:43	Ignition is over, the door is closed right away. The air valve is maintained in its fully open position
12:09:30	End of the Cold start at 350 grams of embers, which value is taken down. The embers are evened out
12:09:40	Start of High Fire test using 5 logs of 3,156 kg firewood (20.2% moisture DB)
12:10:20	End of loading time after 40 seconds.
12:10:22	The door was closed right away, and the air valve was kept in its fully open position
12:43:15	Change of the split train filter holder arrangement at the hour, at gas meter reading 92179,0 normal litres
13:29:35	End of High Fire test cycle at 300 grams of embers (net), the combined bed of ember masses at the end of the High fire test was hence 350+300 = 650 g. The bed of embers was evened, and the air valve kept in its fully open position
13:29:40	Start of Medium Fire test using 5 logs of in total 3,855 kg of firewood 20.0% moisture (DB)
13:30:15	End of the loading time after 35 seconds
13:32:15	The air valve is now set at its final MF position being 1 revolution open
14:29:40	Change of the filter holder arrangement in the split extraction train at the hour, at gas meter reading 92880,12 normal litres
18:21:43	The Medium Fire test is over at platform scale reading of 650 grams
Post Check	The mass combusted during the last 30 minutes of the test was 734-650 = 84 g, thus rendering the MF test valid with respect to the fire out criteria of no less than the 50 g combusted during half an hour.

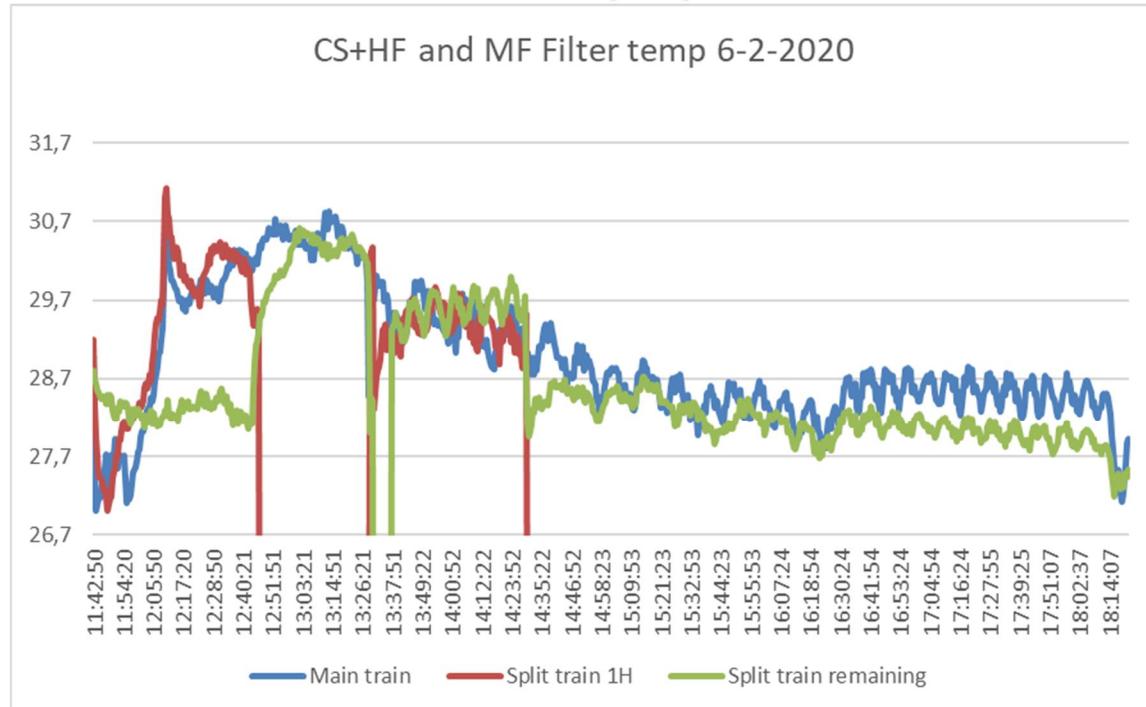

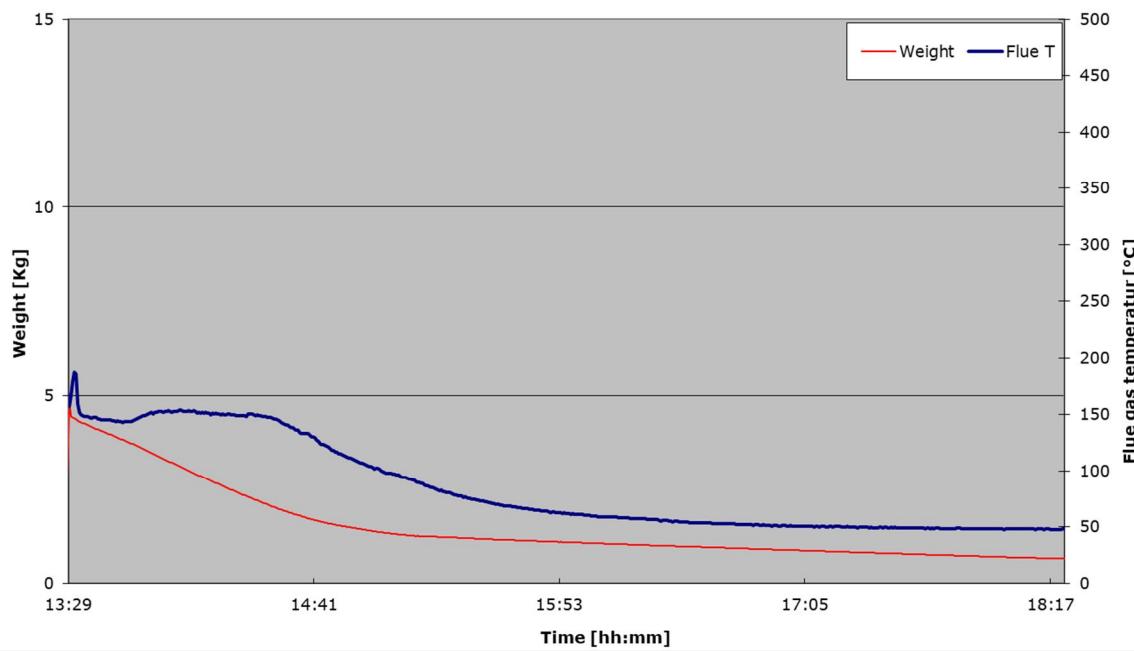

Please find the corresponding sequence of images in annex 4

High fire 2 test  
2020-02-06

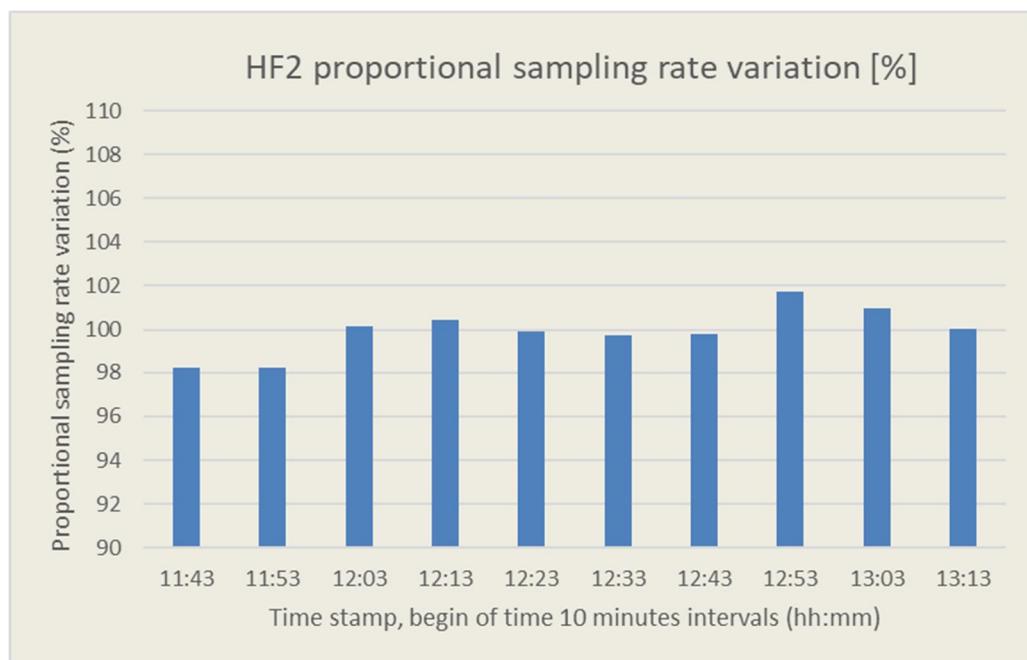

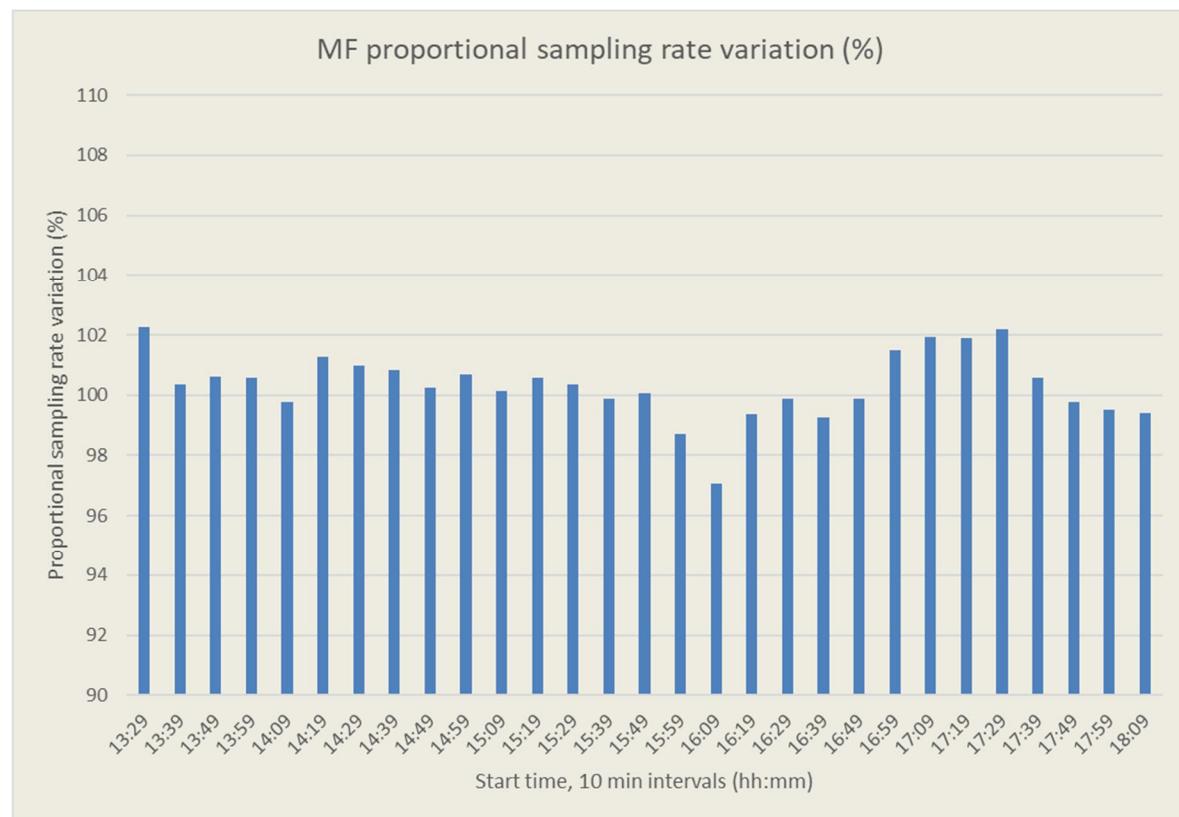

Medium fire test  
2020-02-06

Evidence of filter temperature maintained in-between 26,7-32,2 °C (80-90 F) the 6<sup>th</sup> of February as per Alt-125 letter clause 1) requirement modifying ASTM E2515

HF2 (#3) proportional sampling rate variation as per ASTM E2515 clause 9.8.1

MF (#4) proportional sampling rate variation as per ASTM E2515 clause 9.8.1

Time	EPA Flue gas Temperature (°C)	Surface temperature Top (°C)	Surface temperature Rear (°C)	Surface temperature Right side (°C)	Surface temperature Left side (°C)	Surface temperature Bottom (°C)
11:43:20	21,59	22,25	23,90	23,06	24,25	22,17

Evidence of cold starting conditions on day two, the 6<sup>th</sup> of February 2020 to ASTM E2515 clause 9.8.1 (Ambient temp was 22,2 degr C at 11:43:13 hours)

### 3.5. Anomalies

None

PM Emission Rate - g/h	0,546		
CO Emissions Rate - g/h	21,86		
Overall Efficiency - CSA B415.1-10			
% HHV Basis	80,2		
% LHV Basis	85,9		
Heat Output Range - Btu/h	6959	to	25299

CO arithmetical average for EPA g/h *	22,8
CO arithmetical average for EPA g/min	0,38

\*) please also find the arithmetic CO emi average in the Main results table, chapter 10

\*\*) The HF2 burn rate is corrected from 1,76 kg dry/h as suggested by the CSA HF2 CO, HO & EFF calculation to the true burn rate of 1,74 kg dry/h (1,743) from the ASTM calculation.  
 Similarly, the HF1 burn rate is corrected from 1,90 kg dry/h as suggested by the CSA HF1 CO, HO &EFF calculation to the true burn rate of 1,89 kg dry/h (1,886) from the ASTM calculation.

### 3.15. Test facility conditions

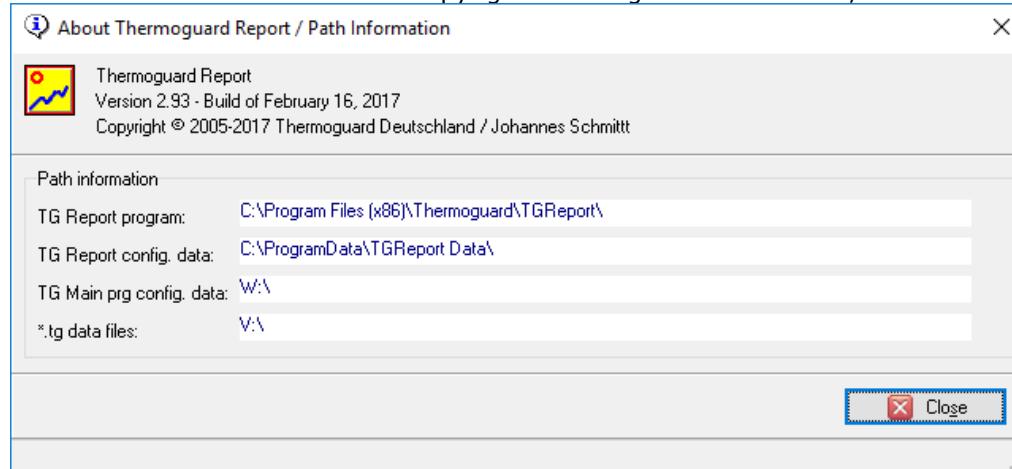

DTI is located at Kongsvangs Allé 29, DK-8000 Århus Denmark, at sea level.

Latitude North: 56,1374

Longitude East: 10,1864

Altitude above sea level: 15 meters

Test facility room temperature, relative humidity and barometric pressure is monitored by the software TERMOGUARD REPORT Copyright Thermoguard Deutschland / Johannes Schmitt

### 3.16. Fuel properties

The test fuel was natural Beech wood split and cut according to the manufacturer' written instructions and compliant with the provisions of ASTM E3053, clause 8.4

The specific gravity of 0,67 dry weight to dry volume ratio was taken from E3053 Fig 2 page 6. Similarly, the gross calorific value of 18800 MJ/kg or 8088 Btu/lb was selected from E3053 Annex A1, table A.1.1 page 17.

The length of the wood logs was 32-34 cm. The basic shape of the wood logs was approximated triangular, trapezoidal or rhombic respecting the minor to major ratio > 40% according to figures 1A and 1B of E3053

The composition of the HF and LF/MF fuel batches were calculated using the standard XLS Wood calculator adjunct to ASTM E3053

The nominal mass of the HF fuel load was 3,141 kg or 6,925 lb

The nominal HF mass range was 3,00-3,33 kg or 6,60-7,30 lb

The allowable mass range of the HF Core load was 1,40-2,00 kg or 3,10-4,50 lb

The allowable mass range of the HF Remainder load was 1,10-1,70 kg or 2,40-3,80 lb

The nominal mass of the LF/MF fuel load was 3,769 kg or 8,310 lb

The nominal LF/MF mass range was 3,581-3,958 kg or 7,894-8,725 lb

The allowable mass range of the LF/MF Core load was 1,696-2,45 kg or 3,739-5,401 lb

The allowable mass range of the LF/MF Remainder load was 1,319-2,073 kg or 2,908-4,570 lb

For all test fuel loads, only 5 logs were used; 3 core and 2 remainder.

### 3.17. Summary of test fuel load properties

	Core 1	Core 2	Core 3	Remainder 1	Remainder 2	Remainder 3
HF1 mass (kg)	0,616	0,607	0,603	0,900	0,415	
HF1 moist. (% DB)	19,9	19,4	19,5	19,7	21,5	
LF mas (kg)	0,711	0,682	0,710	1,016	0,577	
LF moist. (% DB)	20,9	20,8	19,1	22,5	21,7	
HF2 mas (kg)	0,661	0,594	0,586	0,893	0,422	
HF2 moist. (% DB)	20,6	19,3	20,3	20,4	20,1	
MF mass (kg)	0,771	0,725	0,699	1,042	0,618	
MF moist (%DB)	19,8	20,3	19,8	20,2	19,7	

Please find the ASTM E3053 fuel load calculations enclosed in appendices 5-8

Example of batch of firewood

## 4. Test accomplishment

### 4.1. Remarks

The certification tests were accomplished in accordance with the manufacturers written test procedure (please find enclosed in annex 9), the ASTM E3035-17 Cordwood test standard, the EPA ALT125 letter and the ASTM E2515-11 dilution tunnel and sampling standard.

## 4.2. Start-up operation

The Morsø 2B Standard 2020 stove has a traditional air control system with a rotary type dial on the loading door to the front. For start-up operation, the air valve is kept fully (3 and one quarter revolution), which position is maintained during the high fire tests. For the low fire test, the air valve is throttled to 3 quarters of a revolution open, and for the medium fire test, the air valve is throttled to 1 revolution open.

Please find a detailed description of the start-up procedure in the manufacturers test instruction for testing procedure (annex 9)

## 4.3. Sampling arrangement

The PM specimen is extracted from the Ø150 mm Full Flow Dilution Tunnel by means of a dual probe and filter holder system as specified by ASTM E2515-11, clause 6.1.1.1. The filter holders are of type 47 mm Pall 1235. There are 3 sets of backed-up filter holders for PM sampling and one single filter holder for the room blanc measurement.

During the course of the test, the filter holders in the PM sampling lines may be heated respectively cooled as appropriate, to control the filter temperature in the narrow band of 80-90 degrees F.

## 4.4. Fluepipe and chimney configuration

The chimney is composed by single wall uninsulated fluepipe in combination with half insulated system steel chimney compliant with ASTM E3053-17 clause 6.3

The single wall fluepipe extends to 2,50 m above the test rig floor. In combination, the insulated system chimney extends to 4,40 m above the test rig floor, compliant with ASTM E3053-17 clause 8.2.3, stating  $2,6 \pm 0,1$  m for the uninsulated part of the flue and  $4,6 \pm 0,3$  m for the total height of the chimney.

Please find a schematic drawing of the chimney configuration in annex 11

The chimney was connected to the stove using the top flue outlet

## 5. Sampling methods

### 5.1. Particulate extraction system

The particulate matter is sampled in accordance with ASTM E2515-11. Two identical sampling trains are applied at angular position to each other. The sampling trains consists each of a set of front and back Pall type 1235 Al 47 mm in-line filter holders. Filter for PM sampling are Pall TX-40 EMFAB Teflon-coated filters 47 mm membrane filters.

The sampling train operated throughout the entire duration of the test is called the 'Main train'. The other sampling train, shifting filters at the hour is called the 'Split train'.

### 5.2. Calculation of PM emission

The calculations are enclosed in a format following the notation of equations in ASTM E2512-11

Please find the calculation of the first High Fire test (test run #1) in annex 14; the calculations of the Low Fire test (test run #2) in annex 15; the calculations of the second High Fire test (test run #3) in annex 16 and the calculations of the Medium Fire test (test run #4) in annex 17

## 6. Quality assurance

### 6.1. Instrument calibration

There is a set of EPA instrument calibration certificates in annex 13

### 6.2. Logger data

Please find the sets of logger data, sampled every 5 seconds and recorded every 30 seconds in appendices 18 (HF1 test 050220), annex 19 (LF test 050220), annex 20 (HF2 test the 060220) and in annex 21 (MF test 060220)

#### Legend:

Rum - [°C]	Filter-1-H - [°C]	Filter-2-D1 - [°C]
1	2	3
Ambient temperature	Main train filter temp	Split train 1H filter temp

Row 1 is the original Danish notation incl metric

Row 2 is the data logger channel number

Row 3 -5 are the corresponding terms in English

### 6.3. Morsø's Quality Assurance Plan

Quality Assurance Plan is a plan for assuring the quality for products, tested according to NSPS by taking measurements and checks of some key components, referred to as K-list components.  
Please find the entire QA plan amended in annex 30.

## 7. Documentation material

Documentation material:

Assembly drawings in annex 22

Parts drawings in annex 23

Materials sheets in annex 24

Label(s) in annex 25

Picture(s) in annex 26

User's manual in annex 27

Firebox volume in annex 29

The technical drawings and parts drawings are amended to the CBI report variant only.

## 8. Remarks

### 8.1. Internal correction of gasmeters

The Vögtlin Red-Y gasmeters have internal correction to as well normal temperature (here 0-degree C) and to pressure (here 1013 hPa). Consequently, in the calculations, the gasmeter temperature and pressure is entered as 0 degC respectively 1013 hPa. 1013 Hectopascal (hPa) equals 14,69 psi or 10329,7 mm water column.

### 8.2. Joint Cribwood and Cordwood spreadsheet

The spreadsheet used for calculation of the emissions is a 'joint' Cribwood and Cordwood spreadsheet, in so far as the particle emission calculation is identical for Cribwood and Cordwood. When used for a Cordwood test there are some void spaces under the fuel mass calculation. Also, generally the fuel is referred to as 'Cribs' even though for good reasons, for Cordwood, wood logs are used.

### 8.3. Request of restriction of the air valve action

The action of the air valve must be restricted by means of a physical stop or by blanking out a corresponding proportion of the opening of the air valve plate, as to prevent use of the stove at any valve setting lower than the one used during the Low Fire test, here 3 quarters of a revolution open.

### 8.4. Duplicated High fire calculations

AS well for the ASTM calculations as for the CSA calculations we have performed double calculations. One which applies for the HF part alone, to return the burn rate and another for the combined CS + HF part tests, to return the particle emission.

## 9. Discussion of Results

For the high fire burn rate calculations, there is a minor still insignificant deviation from the (true) ASTM calculation to the CSA calculation.

For the HF1 test the true burn rate is 1,886 kg dry matter per hour. CSA suggests 1,90 kg dry matter per hour

For the HF2 test, the true burn rate is 1,743 kg dry matter per hour. CSA suggests 1,76 kg dry matter per hour

The deviating results are attributed to different rounding and number of decimal places, metric conversion factors in combination with direct test run timekeeping for ASTM calculation, but secondary or derived test run timekeeping for the CSA calculation.

## 10. Main results

	<b>High fire 1</b>	<b>Low fire</b>	<b>High fire 2</b>	<b>Medium fire</b>
Date	5-2-2020	5-2-2020	6-2-2020	6-2-2020
Run Number	#1	#2	#3	#4
ASTM 3053 Emission Rate g/Hr.	2,19	0,18	1,89	0,17
ASTM E3053 Emissions – First Hour (g/hr)	2,39	1,07	2,44	0,52
ASTM 3053 Burn Rate Kg/Hr.	1,89	0,48	1,74	0,66

Title: Alt-125 Acceptance letter of cordwood testing

Pages total: 3, excl this cover page

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
RESEARCH TRIANGLE PARK, NC 27711

FEB 28 2018

Mr. Justin White  
Hearthstone QHPP, Inc.  
#17 Stafford Ave.  
Morrisville, VT 05661

OFFICE OF  
AIR QUALITY PLANNING  
AND STANDARDS

Dear Mr. White,

I am writing in response to your letter dated January 12, 2018, regarding wood heaters manufactured by Hearthstone QHPP, Inc. (Hearthstone). This response, dated February 28, 2018, supercedes our previous response (dated February 26, 2018) to correct an inaccuracy regarding required changes to ASTM E3053-17.

You are requesting to use an alternative test method, using cord wood, as referenced in section 60.532(c) of 40 CFR part 60, Subpart AAA, Standards of Performance for New Residential Wood Heaters (Subpart AAA) to meet the 2020 cord wood alternative compliance option. The 2020 cord wood alternative compliance option states that each affected wood heater manufactured or sold at retail for use in the United States on or after May 15, 2020, must not discharge into the atmosphere any gases that contain particulate matter in excess of 2.5 g/hr. Compliance must be determined by a cord wood test method approved by the Administrator along with the procedures in 40 CFR 60.534. You have requested approval to use the procedures and specifications found in ASTM Method E3053-17, a cord wood test method titled, "Standard Test Method for Determining Particulate Matter Emissions from Wood Heaters using Cordwood Test Fuel," in conjunction with ASTM E2515-11 and Canadian Standards Administration (CSA) Method CSA-B415.1-10, which are specified in 40 CFR 60.534.

We understand that Hearthstone is also requesting that the alternative method proposed above be approved to apply broadly to all wood heaters manufactured by Hearthstone meeting the requirements of Subpart AAA, from the approval date of this request until such time that Subpart AAA is revised or replaced to require a different cord wood certification method, providing all requirements of section 60.533 of Subpart AAA are met.

With the caveats set forth below, we approve your alternative test method request for certifying wood heaters using ASTM E3053-17 in conjunction with section 60.534 of Subpart AAA to meet the 2020 cord wood compliance option until such time that Subpart AAA is revised or replaced to require a different cord wood certification method. We also approve application of this alternative method to all wood heaters manufactured by Hearthstone meeting the requirements of Subpart AAA.

As required in Subpart AAA, section 60.354(d), you or your approved test laboratory must also measure the first hour of particulate matter emissions for each test run using a separate filter in one of the two parallel sampling trains. These results must be reported separately and also included in the total particulate matter emissions per run. Also, as required by Subpart AAA, section 60.534(e), you must have your approved laboratory measure the efficiency, heat output, and carbon monoxide emissions of the tested wood heater using CSA-B415.1-10. For measurement of particulate matter emission concentrations, ASTM 2515-11 must be used.

The following change to ASTM E3053-17 must be followed:

1. Coal bed conditions prior to loading test fuel. The coal bed shall be a level plane without valleys or ridges for all test runs in the high, low, and medium burn rate categories.

The following changes to ASTM E2515-11 must be followed:

1. The filter temperature must be maintained between 80 and 90 degrees F during testing.
2. Filters must be weighed in pairs to reduce weighing error propagation; see ASTM 2515-11, Section 10.2.1 Analytical Procedure.
3. Sample filters must be Pall TX-40 or equivalent Teflon-coated glass fiber, and of 47 mm, 90 mm, 100 mm, or 110 mm in diameter.
4. Only one point is allowed outside the +/- 10 percent proportionality range per test run.

A copy of this letter must be included in each certification test report where this alternative test method is utilized.

It is reasonable that this alternative test method approval be broadly applicable to all wood heaters subject to the requirements of 40 CFR part 60, Subpart AAA. For this reason, we will post this letter as ALT-125 on our website at <http://www3.epa.gov/ttn/emc/approalt.html> for use by other interested parties. As noted earlier in this letter, this alternative method approval is valid until such time that Subpart AAA is revised or replaced to require a different cord wood certification method, and at such time, this alternative will be reconsidered and possibly withdrawn.

If you have additional questions regarding this approval, please contact Michael Toney of my staff at 919-541-5247 or [toney.mike@epa.gov](mailto:toney.mike@epa.gov).

Sincerely,

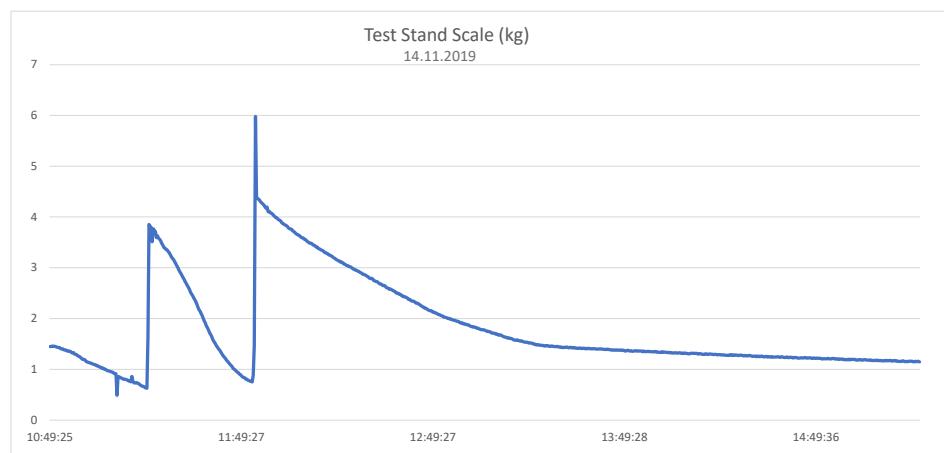

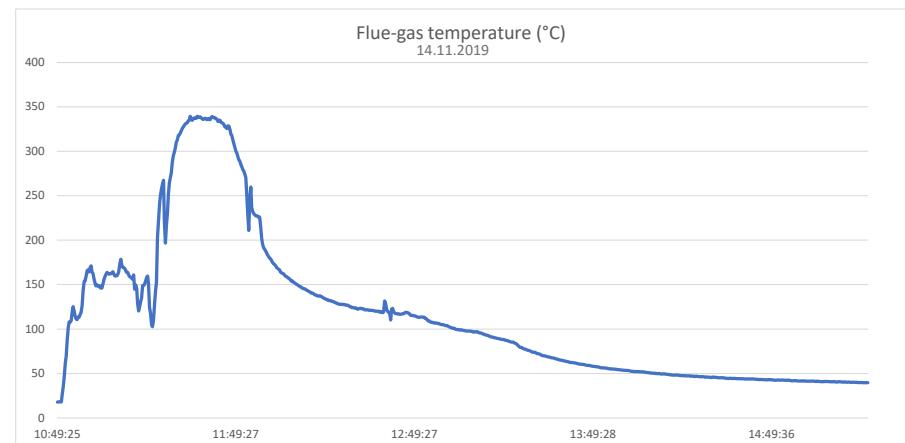

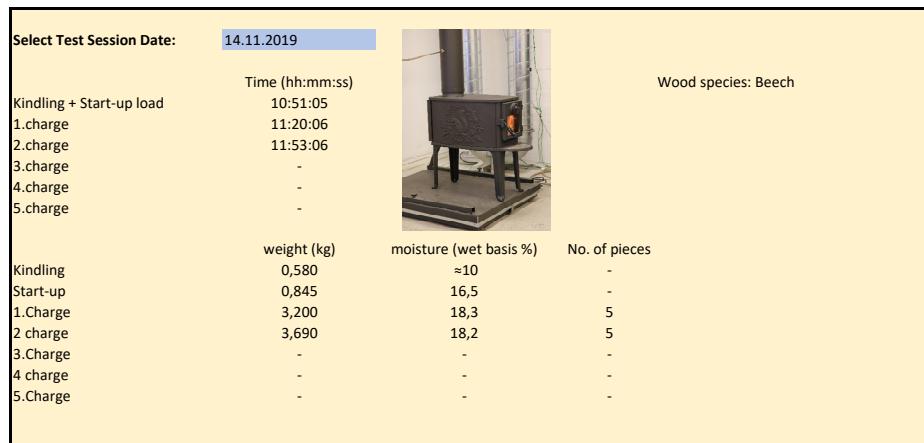

Steffan M. Johnson, Group Leader  
Measurement Technology Group

## Annex 9

Title: Manufacturers instruction for testing procedure

Pages total: 3, excl this cover page

# Manufacturers instruction for testing procedure

## according to ASTM E3053-17

### Morsø 2B Standard 2020 High Fire Procedure

#### Test Fuel:

Recommended test fuel species is beech.

The guidelines of the Cordwood standard E3053-17 are followed in regards of moisture content and weight ratios for kindling, startup, core and sub loads.

The nominal length for High Burn core and sub load is 13" (33 cm.)

The usable firebox volume is 0.692460 ft<sup>3</sup> (0,0196082 m<sup>3</sup>)

#### Kindling and Startup:

The Start-up load is added to the kindling load. Ignited together in the same batch.

A "top-down" approach is used when igniting the fire.

The firebox is deep and narrow. To make things simple keep the length of kindling and start-up pieces just about the same length as the minimum width of the firebox.

Left to right:

- Startup load. Consist of 6-8 pieces. Weight of each pieces varies from 100-150 grams. Diameter 3 cm to 5 cm.
- Kindling, medium size. Consist of pieces with a weight of 30-60 grams. Diameter 1 cm to 2 cm.
- Kindling, small size. Consist of pieces with a weight up to 20 grams. Diameter approximate 0.5 cm

Start-up load at the bottom, distributed in two layers. Each layer is perpendicular to each other. Next, on top of the startup load, the medium sized kindling is distributed in two to three layers. These layers are also perpendicular to each other. Finally, the smallest kindling pieces is placed loosely on top, all in the same direction, stove front to stove back.

On top of the wood, place one or two fire-starters. Re-arrange a couple of the top kindling pieces so they support the fire-starters on the sides. This will prevent the fire-starters from falling off and ease ignition of the wood.

Keep a ≈ 2" distance from the load to the baffle. If there is too much wood in the stack to comply with this, then take the remaining kindling pieces and lay next to the main stack.

### Load ignition

Set the air controller at maximum setting and fully open the stove door.

Build the start-up and kindling wood-stack as described. The wood-stack should be centered in the middle of the hearth.

Ignite one of the fire-starters with a gas torch.

Close the door immediately after ignition

### **High Fire loading and ignition:**

The charcoal bed for the High Fire should be at the lower end of the allowable range. But keep an eye on the charcoal bed, don't wait to the very end of the range, if the charcoal bed seems to burn out and getting too cold.

High Fire Load sample  
Nominal length 13"

High Fire Load sample  
Arrangement

The High Fire fuel load consist of five pieces. The preferred configuration of the load is a bottom layer of three pieces and second layer on top with two pieces. The load should be stacked compact without much air between each piece.

It is important that the fuel load height is kept below the path of the secondary air outlet stream (baffle plate)

Start the High Fire by fully open the stove door. Keep the air controller setting at maximum. If the burnt Kindling and Start-up wood-stack hasn't collapsed completely, even out the charcoal pieces with a poker. The bigger charcoal pieces should be poked to the front end of the hearth. Next load the fuel, keep a distance between fuel load and the back wall of the firebox of approximately 0.5"-1" (1.25 cm-2.5 cm).

The load should ignite rapidly

When the fire is steady close the door. This will take approximately 1 minute. Keep air controller fully open.

The High Fire should be stopped at the lower end of the allowable weight range.

# **Manufacturers instruction for testing procedure**

## **according to ASTM E3053-17**

### **Morsø 2B Standard Medium and Low Fire Procedure**

#### **Test Fuel:**

Recommended test fuel species is beech.

The guidelines of the Cordwood standard E3053-17 are followed in regards of moisture content and weight ratios for kindling, startup, core and sub loads.

The nominal length for Low and Medium Burn core and sub load is 13" (33 cm.)

The usable firebox volume is 0.692460 ft<sup>3</sup> (0,0196082 m<sup>3</sup>)

#### **Low and Medium Fire loading and ignition:**

The Low and Medium Fire test is much like the High Fire, regarding both test procedure and load arrangement.

The Low/Medium Fire fuel load consist of five pieces. The preferred configuration of the load is a bottom layer of three pieces and second layer on top with two pieces. The load should be stacked compact without much air between each piece.

It is important that the fuel load height is kept below the path of the secondary air outlet stream (baffle plate)

Start the Low/Medium Fire by fully open the stove door. Keep the air controller setting at maximum. Even out the charcoal pieces on the hearth with a poker. Next load the fuel, keep a distance between fuel load and the back wall of the firebox of approximately 0.5"-1" (1.25 cm-2.5 cm).

The load should ignite rapidly.

When the fire is steady close the door. This will take approximately 1-2 minute.

Adjust and set the primary air controller at latest, half a minute before the allowable timeframe closes. The Low Fire setting is  $\frac{3}{4}$  turn on the air controller valve. Medium Fire setting is  $1\frac{1}{2}$  turn on the air controller valve.

Low and Medium Fire Test Run Completion-The test run is completed when the scale indicates the remaining weight of the test fuel load is 0.0 lb. (0.00 kg) or less for 30 s OR if at least 90 % of the test fuel load weight has been consumed and there is no measurable weight loss ( $<0.1$  lb (0.05 kg) or 1.0 % of the test fuel load weight, whichever is greater) for at least 30 min.

## Annex 10

Title: Manufacturers description of the wood heater

Pages total: 1, excl this cover page

## **WOOD HEATER INFORMATION**

**Appliance Manufacturer:** Morsø Jernstøberi A/S

**Wood Stove Model:** 2B Standard 2020

**Type:** Freestanding, radiant-type wood fired room heater.

## **WOOD HEATER DESCRIPTION**

**Materials of Construction:** The unit is constructed primarily of cast iron with a stainless-steel secondary combustion air supplying baffle. The firebox is lined with molded vermiculite firebricks. The feed door has a 150 mm by 130 mm glass panel and an 8 mm diameter fiberglass gasket.

**Air Introduction System:** Air enters the firebox through a spin-draft located at the front of the appliance at the top of the fuel-loading door. Secondary air enters the appliance through the upper back and supplies a three-step, tiered hollow baffle.

**Combustion Control Mechanisms:** The combustion air inlet is controlled by a spin-draft located at the top of the fuel-loading door in the center of the appliance. Only the primary combustion air is adjustable, the secondary combustion air is fixed.

**Combustor:** N/A

**Internal Baffles:** A hollow, tiered baffle with a cast iron extension baffle is mounted in the upper portion of the firebox. The flame path is forced to the front of the firebox where it travels up through the opening between the baffle and primary air manifold. A ceramic wool blanket is employed on the top of the baffle.

**Other Features:** None

**Flue Outlet:** The 5" diameter flue outlet is located at the rear top end of the appliance.

### KALIBRERINGSCERTIFIKAT

#### Kalibrering af TC Type K : Udført på logger kanal 202 (\*)

Input	Referenceværdi (Simuleret TC-Temp.)	Aflæsning	Fejl	Usikkerhed
0,0000 mV	0,0 °C	0,3 °C	3,0E-01 °C	1,2E-01 °C
4,0920 mV	100,0 °C	100,3 °C	2,8E-01 °C	1,3E-01 °C
8,1385 mV	200,0 °C	200,3 °C	3,4E-01 °C	1,3E-01 °C
16,3971 mV	400,0 °C	400,3 °C	3,0E-01 °C	1,2E-01 °C
24,9055 mV	600,0 °C	600,3 °C	2,8E-01 °C	1,3E-01 °C

#### Kalibrering af TC Type T : Udført på logger kanal 203 (\*)

Input	Referenceværdi (Simuleret TC-Temp.)	Aflæsning	Fejl	Usikkerhed
0,0000 mV	0,0 °C	0,0 °C	0,0E-01 °C	1,2E-01 °C
2,0357 mV	50,0 °C	50,0 °C	0,0E-01 °C	1,2E-01 °C
4,2785 mV	100,0 °C	100,0 °C	0,0E-01 °C	1,2E-01 °C
6,7041 mV	150,0 °C	150,0 °C	0,0E-01 °C	1,2E-01 °C
9,2881 mV	200,0 °C	200,0 °C	0,0E-01 °C	1,2E-01 °C

(\*) Thermocouple Test med ekstern cold junction v. 0 °C - elektromotorisk kraft defineret i DS/EN 60584-1:2014

#### Bemærkninger:

Aflæsning er middelværdien af flere aflæsninger på det kalibrerede måleinstrument.

Fejl = Aflæsning - referenceværdi.

Den rapporterede eksploderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

#### Kalibreringsforhold:

Rumtemperatur: 23 °C ± 1 °C

#### Sporbarhed:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

**Periode:** Modtaget: 22-08-2019 Kalibreret: **27-08-2019**

**Procedure:** D1-5.1

**Bemærkninger:** Kalibreringen er foretaget med en referenceføler med en diameter på 5,8 mm. Der benyttes et isoleringsrør som placeres omkring referenceføleren, ovenpå blokken. Røret er foret med mineraluld og har en højde på ca. 150 mm (Ø 25 mm). Mellem blokken og isoleringsrør er der isoleret med mineraluld. Aksial inhomogenitet og temperaturinstabilitet for kalibratoren er undersøgt i overensstemmelse med EURAMET cg-13 Version 3.0 (02/2015). Radial inhomogenitet ikke undersøgt pga. indsatsens udformning.

**Vilkår:** Kalibreringen er udført akkrediteret i henhold til gældende vilkår fastlagt af DANAK, jf. [www.danak.dk](http://www.danak.dk), og i henhold til Teknologisk Instituts almindelige vilkår, som er gældende på tidspunktet for aftaleindgåelsen. Kalibreringsresultater gælder udelukkende for det kalibrerede emne. Kalibreringscertifikatet må kun gengives i uddrag, hvis laboratoriet skriftligt har godkendt uddraget.

**Kalibreret af:** Bjørn Kjærsgaard Nielsen, 72203534, bjni@teknologisk.dk

## TEKNOLOGISK INSTITUT

Certifikat nr.: 200-T-22933

Side 3 af 3

### KALIBRERINGSCERTIFIKAT Fejlkurve

Kalibrator mærket: 270-A-912

**Kun de markerede punkter er målt.**

**Bemærkninger:**

Aflæsning er middelværdien af flere aflæsninger på det kalibrerede måleinstrument.

Fejl = Aflæsning - referenceværdi.

Den rapporterede eksploderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

Alle temperaturer er i henhold til ITS90

**Kalibreringsforhold:**

Rumtemperatur:  $23,8 \text{ }^{\circ}\text{C} \pm 2,2 \text{ }^{\circ}\text{C}$

Relativ fugtighed:  $63,1 \% \text{rh} \pm 7,1 \% \text{rh}$

Barometerstand:  $1021,5 \text{ mbar} \pm 2,6 \text{ mbar}$

**Sporbarhed:**

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

<b>Internt kalibreringscertifikat vedr. kalibrering af vægte i DTI's laboratorier</b> Obligatorisk for vægte, som anvendes til vejninger, der er omfattet af DTI's DANAk akkrediteringer, bortset fra akkreditering nr. 200. Certifikatet må i uddrag kun gengives, såfremt DTI's kvalitetschef har godkendt uddraget.					Afdeling: DTI/ Energi	Laboratorium: ELAB

### KALIBRERINGSCERTIFIKAT

#### LABORATORIEBETINGELSER OG SPORBARHED

##### Laboratoriebetingelser:

Rumtemperatur (°C) :	22,4 ± 0,6
Relativ luftfugtighed (%) :	54 ± 10
Barometerstand (mbar) :	1020,1 ± 1

##### Referencer:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

##### Usikkerhed:

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden multipliceret med dækningsfaktoren  $k = 2$ , som for en normalfordeling svarer til en dækningssandsynlighed på ca. 95%. Standardusikkerheden er fastlagt i overensstemmelse med EA-04/2.

Certifikat nr.: 200-P-24979

Side 4 af 4

KALIBRERINGSCERTIFIKAT  
Fejlkurve

**Bemærkninger:**

Alle værdier under 'Op' og 'Ned' er afrundede middelværdier af 10 målinger (rådata). Værdierne under 'Fejl' er ligeledes afrundede middelværdier af samme rådata (evt. 2 gange, dvs. 20 eller 40 målinger). Der kan derfor forekomme uoverensstemmelse mellem måleresultater og fejl, da alle tal afrundes til 2 betydende cifre, jf. EA4/02.  
Fejl = aflæsningsværdi - referenceværdi.

Den beregnede standardusikkerhed inkluderer relevante korttidsbidrag samt den halve hysterese fra det kalibrerede emne.

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

**Kalibreringsforhold:**

Prøvemedium:	Luft
Rumtemperatur:	$20,3 \text{ } ^\circ\text{C} \pm 0,4 \text{ } ^\circ\text{C}$
Relativ fugtighed:	$62,7 \text{ \%rh} \pm 6,6 \text{ \%rh}$
Barometerstand:	$1005,3 \text{ mbar} \pm 2,0 \text{ mbar}$

**Sporbarhed:**

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

### KALIBRERINGSCERTIFIKAT Fejlkurve

**Kun de markerede punkter er målt.**

#### Bemærkninger:

Fejl = aflæsning middel - referenceværdi.

Den beregnede standardusikkerhed inkluderer relevante korttidsbidrag samt den halve hysterese fra det kalibrerede emne.

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

#### Kalibreringsforhold:

Prøvemedium: Nitrogen

Rumtemperatur:  $20,5 \text{ }^{\circ}\text{C} \pm 0,3 \text{ }^{\circ}\text{C}$

Relativ fugtighed:  $44,4 \text{ \%rh} \pm 4,4 \text{ \%rh}$

Barometerstand:  $1019,7 \text{ mbar} \pm 2,0 \text{ mbar}$

#### Sporbarhed:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

# Kalibreringscertifikat

Certifikat nr.: 9.8-21127  
Side: 1 af 3

**OBJEKT:**

Prøveemne: Masseflowmåler  
Fabrikat: Red-y  
Id nr.: Hel  
Serie nr.: 198703  
Størrelse: 10 nl/min N2

**REKVIRENT:** Teknologisk Institut  
Kongsvang Allé 29  
8000 Århus C  
Att.: Max Bjerrum

**SKALA//SKALAINDELING:** 0 - 10 nl/min // 0,1 nl/min

**PRØVNINGSBETINGELSER:**

Prøvningsmetode/medie: Gennemstrømning med nitrogen.  
Middelbarometerstand: 1006 mbar  
Omgivelsestemperatur:  $20 \pm 1^\circ\text{C}$

**PRØVNINGSOMFANG:** Kalibrering ved : 2,5; 5,0; 7,5 og 10 nl/min  
Resultater opgives i nl/min  
(1 nl/min = 1 l/min ved  $0^\circ\text{C}$ , og 1013,25 mbar.)

**KALIBRERING iht.:** FORCE instruktion nr. 60.2.02.

**KALIBRERINGSATO:** 2019-09-17

**KALIBRERINGSRESULTAT:** Resultater, se side 2.

**SPORBARHED:** Prøveanlæg: FORCE nr.: C02-006 Se side 3.

**BEMÆRKNINGER:** Teknisk vurdering: Ingen bemærkninger.

**UDSTEDELSESATO:** 2019-10-01

**Preben Bendt Toftdahl Jensen**  
Opgaveansvarlig

**Flemming Grud Madsen**  
Underskriftsberettiget

FORCE Technology, Navervej 1 6600 Vejen tlf: 76961600

Dansk nationalt metrologi laboratorium, Designated institut (DI) for volumengasmåling og flowmåling.

Certifikat må kun gengives i uddrag med FORCE Technology's skriftlige tilladelse.

De 'Almindelige betingelser' på bagsiden er en integreret del af vor ydelse.

**OBJEKT:**

Prøveemne:	Masseflowmåler	Qmax:	10 nl/min
Fabrikat:	Red-y	Qmin:	0 nl/min
Id nr.	Hel	Scale division:	0,1 nl/min
Serie nr.:	198703		
Størrelse:	10 nl/min N2		

**Referenceværdier**

**Udstyr under kalibrering**

Sandt flow nl/min	Ucmc ±nl/min	Vist flow nl/min	Standard-usikkerhed nl/min	Fejl Relativ %	Ekspanderet usikkerhed ±%	Dækningsfaktor (k)	Tryk mbara	Temperatur °C
10,027	0,017	10,00	0,03	-0,27	0,50	1,65	1009,4	20,4
7,485	0,013	7,50	0,03	0,20	0,65	1,65	1009,2	20,4
4,952	0,008	5,00	0,03	0,98	0,97	1,65	1009,1	20,4
2,4883	0,0042	2,50	0,03	0,47	1,92	1,65	1009,1	20,4

"Ucmc" er 0,17% af "Sandt flow".

"Vist flow" er middelværdi af visninger aflæst i målerens display. Antallet af aflæsninger var 11.

I "Standardusikkerhed" er et bidrag fra standardafvigelsen knyttet til "Vist flow" samt et bidrag fra aflæsningernes afrundingsfejl. Standardafvigelsen var nul i alle flowpunkter.

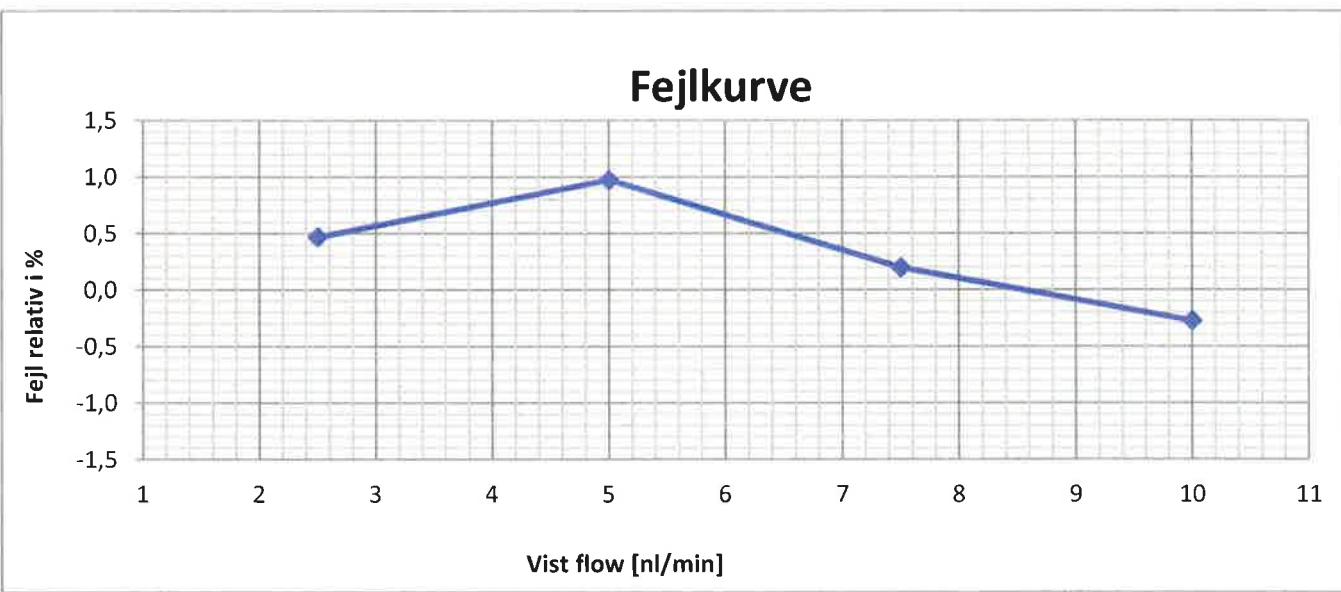

"Fejl relativ" blev beregnet med formlen: ("Vist flow" - "Sandt flow")/"Sandt flow"×100.

Summen af bidrag i måleusikkerhed fra måleevnen "Ucmc" og fra standardafvigelsen knyttet til "Vist flow" divideret med bidraget fra afrundingsfejlen i aflæsningerne er 0,3 eller mindre. Det viser at "Fejl Relativ" er omtrent firkantfordelt. Dækningsfaktoren er derfor 1,65.

"Ekspanderet usikkerhed" blev beregnet med formlen:

$$\frac{k}{\text{"Sandt flow"}} \times \sqrt{\left(\frac{\text{"Ucmc"}^2}{2}\right)^2 + \text{"Standardusikkerhed"}^2} \times 100$$

"Temperatur" og "Tryk" blev målt efter måler.

Task nr.: 119-28038  
Certifikat nr.: 9.8-21127  
Side: 3 af 3

## LABORATORIETS KONTROLUDSTYR

De med x mærkede arbejdsnormaler er anvendt til kalibreringen.

**Arbejdsnormaler:**      **FORCE nr:**      **Sporbarhed:**

**Anlæg: FORCE nr. C02-006.**

Small tube 1-750 ml/min	A00-070	Trescal
Medium tube 1-10000 ml/min	A00-069	Trescal
x Big tube 1-50000 ml/min	A00-068	Trescal

**Øvrigt udstyr:**

x Temperaturmålere	A70xxx	kalibreres i.h.t. instruktioner
x Trykmålere	A80xxx	kalibreres i.h.t. instruktioner

### Laboratoriets måleevne:

I beregningen af måleevnen Ucmc er medtaget alle betydende bidrag bortset fra målerens standardafvigelse og afrundingsfejl, som medtages i beregningen af den rapporterede ekspanderede usikkerhed.

**Måleevnen Ucmc er:**       $\pm 0,17\%$  relativ.

### Ekspanderet usikkerhed:

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren k, således at dækningssandsynlighed svarer til ca. 95 %.

### KALIBRERINGSCERTIFIKAT

#### Fejlkurve

Føler mærket: 270-A-1629 BUND KANAL

**Kun de markerede punkter er målt.**

#### Bemærkninger:

Aflæsning er middelværdien af flere aflæsninger på det kalibrerede måleinstrument.  
Fejl = Aflæsning - referenceværdi.

Den rapporterede eksplanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

Alle temperaturer er i henhold til ITS90

#### Kalibreringsforhold:

Rumtemperatur:  $22,7 \text{ }^{\circ}\text{C} \pm 1,4 \text{ }^{\circ}\text{C}$   
Relativ fugtighed:  $40,2 \text{ \%rh} \pm 9,3 \text{ \%rh}$   
Barometerstand:  $1022,9 \text{ mbar} \pm 5,1 \text{ mbar}$

#### Sporbarhed:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

## Kalibrering Humimeter, Fugtmåler

Måleskema til kontrol af Fugtmåler(EPA)

Dato:

17-09-2019

Udført af:

REHV

Emne Id nr.:

145070

Certifikat nr.:

ELAB-38-2019

Kalibrator ref.:

148135 (test block)

**Fremgangsmetode:** Fugtmåler kontrolleres op imod test block fra samme producent. Er visningen indenfor range er grundkalibrering OK.  
[https://www.youtube.com/watch?v=wmGgFWhd\\_Yk](https://www.youtube.com/watch?v=wmGgFWhd_Yk)

- 1- Sørg for der ikke er fugt på nålene.
- 2- Tænd og aflæs rumtemperatur: 21,5 (range 20-26°C)
- 3- Find "Test Block"
- 4- Test side 1 "22,0" ved at sætte de to flanger fra "test block'en" på de to møtrikker nålene er monteret med
- 5- Noter hvad apparatet mäter: 22,3% (range 21,5-22,5%)
- 6- Test side 2 "41,0" ved at sætte de to flanger fra "test block'en" på de to møtrikker nålene er monteret med
- 7- Noter hvad apparatet mäter: 41,6% (range 39,5-42,0%)
- 8- Er visningerne uden for det anbefalede range kan punkter sidst i denne video følges, alternativt sendes apparat til kalibrering.
- 9- Apparat bruges normalt kun som rettesnor for fugtniveau, ikke til endelig fugtangivelse. Til endeligt fugtangivelse benyttes ovn i mellemgang.

#### Bemærkninger:

Fejl = aflæsning middel - referenceværdi.

Den beregnede standardusikkerhed inkluderer relevante korttidsbidrag samt den halve hysterese fra det kalibrerede emne.

Den rapporterede ekspanderede usikkerhed er angivet som standardusikkerheden af målingen multipliceret med dækningsfaktoren  $k=2$ , således at dækningssandsynligheden svarer til ca. 95 %.

#### Kalibreringsforhold:

Prøvemedium:

Luft

Rumtemperatur:

$19,9 \text{ }^{\circ}\text{C} \pm 0,3 \text{ }^{\circ}\text{C}$

Relativ fugtighed:

$44 \% \text{rh} \pm 4,2 \% \text{rh}$

Barometerstand:

$1007 \text{ mbar} \pm 2,0 \text{ mbar}$

#### Sporbarhed:

Dette kalibreringscertifikat er omfattet af DANAK akkreditering og EA's og ILAC's multilaterale aftaler for kalibrering, hvilket sikrer, at målingerne er sporbare til SI enhedssystemet.

**Notation and units****E2780**

- Equation (1)  $M_{Swb}$  weight of all test fuel spacers, wet basis, kg  
 $FM_S$  average fuel moisture of all test fuel spacers, % dry basis  
 $M_{Sdb}$  weight of all test fuel spacers, dry basis, kg
- Equation (2)  $M_{CPnw}$  weight of each test fuel piece  $n$  in fuel crib, excluding nails and spacers, wet basis, kg  
 $FM_{CPn}$  average fuel moisture of test fuel piece  $n$  in fuel crib, % dry basis,  
 $n$  individual test fuel pieces that comprise the test fuel crib, as applicable  
 $M_{Cdb}$  weight of fuel crib, excluding nails and spacers, dry basis, kg
- Equation (3)  $M_{Cdb}$  weight of fuel crib, excluding nails and spacers, dry basis, kg  
 $V_C$  Volume of fuel crib, m<sup>3</sup>  
 $D_{Cdb}$  density of fuel, crib, excluding spacers and nails, dry basis, kg/m<sup>3</sup>
- Equation (4)  $M_{Sdb}$  weight of all test fuel spacers, dry basis, kg  
 $M_{Cdb}$  weight of fuel crib, excluding nails and spacers, dry basis, kg  
 $M_{FTAdb}$  total weight of fuel crib excluding nails, dry basis, kg
- Equation (5)  $M_{FTAdb}$  total weight of fuel crib excluding nails, dry basis, kg  
 $\theta$  total length of test run, min.  
 $BR$  dry burn rate, kg/h

E2515

**Weight of test fuel spacers, dry basis, kg**

E2780

$$\text{Equation (1)} \quad M_{Sdb} = (M_{Swb}) * \left( \frac{100}{100 + FM_s} \right)$$

M\_swb 0 kg (wet basis)  
 FM\_s 0 % (dry basis)

$$\begin{aligned} M_{Sdb} &= (0 / (100 + 0)) \text{ kg (dry basis)} \\ M_{Sbd} &= 0 \text{ kg (dry basis)} \end{aligned}$$

**Weight of test fuel crip, excluding nails and spacers, dry basis, kg**

E2780

$$\text{Equation (2)} \quad M_{Cdb} = \sum(M_{CPnwb}) * \left( \frac{100}{100 + FM_{CPn}} \right)$$

M\_CPnwb #REF! kg (wet basis)  
 FM\_CPN 0 % (dry basis)

$$\begin{aligned} M_{Cdb} &= \sum((#REF! / (100 + 0))) \text{ kg (dry basis)} \\ M_{Cdb} &= #REF! \text{ kg (dry basis)} \end{aligned}$$

**Density of fuel crip, excluding spacers and nails, dry basis, kg/m3**

E2780

$$\text{Equation (3)} \quad D_{Cdb} = \frac{M_{Cdb}}{V_c}$$

M\_Cdb #REF! kg (dry basis)  
 V\_C #N/A m3

$$\begin{aligned} D_{Cdb} &= #REF! / #N/A \text{ kg (dry) / m3} \\ D_{Cdb} &= #REF! \text{ kg (dry) / m3} \end{aligned}$$

**Total weight of fuel crip excluding nails, dry basis, kg**  
E2780

$$\text{Equation (4)} \quad M_{FTAdb} = M_{Sdb} + M_{Cdb}$$

$$\begin{array}{ll} M_{Sdb} & 0 \text{ kg (dry basis)} \\ M_{Cdb} & \#REF! \text{ kg (dry basis)} \end{array}$$

$$\begin{array}{lll} M_{FTAdb} & = & 0 \\ & & + \#REF! \text{ kg (dry basis)} \\ M_{FTAdb} & = & \#REF! \text{ kg (dry basis)} \end{array}$$

**Burn rate, kg (dry/h)**

E2780

$$\text{Equation (5)} \quad BR = \frac{60 * M_{FTAdb}}{\theta}$$

$$\begin{array}{ll} M_{FTAdb} & \#REF! \text{ kg (dry basis)} \\ \theta & 106,37 \text{ min} \end{array}$$

$$\begin{array}{ll} BR & = \frac{60}{106} \times \#REF! \\ BR & = \#REF! \end{array}$$

**Air velocity in tunnel at traverse measurements:**

E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

F_p	1,00 (Direkt)
K_p	34,97 -
C_p	0,99 -
ΔP_avg	2,66 mmVS
T_s	297,30 K
P_s	766,42 mmHg
M_s	29,00 g/g mole
P_Dynamisk	26,10 Pa
T_Kanal	24,30 °C
P_s	102190 Pa
Ps_Tryk	-40 Pa

$$V_s = 1,00 * 34,97 * 0,99 * (2,66)^{0,5} * \left( \frac{297,30}{766,42 * 29,00} \right)^{0,5}$$

$$V_s = 6,53 \text{ m/s (V_scent)}$$

**Pitot tube factor for center:**

E2515

$$\text{Equation (1)} \quad F_p = \frac{V_{strav}}{V_{scent}}$$

V_strav	6,00 m/s	(Average)
V_scent	6,53 m/s	(Average)

$$F_p = \frac{6,00}{6,53}$$

$$F_p = 0,9187 -$$

**Air velocity in dilution tunnel during test charge**

E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

F_p	0,9187 -
K_p	34,97 -
C_p	0,99 -
Delta P_avg	2,68 mmVS
T_s	308,20 K
P_s	766,42 mmHg
M_s	29,00 g/g mole

$$V_s = 0,9187 * 34,97 * 0,99 * \left( 2,68 \right)^{0,5} * \left( \frac{308,20}{766,42 * 29,00} \right)^{0,5}$$

$$V_s = 6,13 \text{ m/s (V_scent)}$$

**Average gas flow rate in dilution tunnel:**

E2515

$$\text{Equation (3)} \quad Q_{std} = 60 * (1 - B_{ws}) * V_s * A * \left( \frac{T_{std} * P_s}{T_s * P_{std}} \right)$$

B_ws	0,02 -
V_s	6,131739 m/s
A	0,017671 m <sup>2</sup>
T_std	293 K
P_s	766,4177 mmHg
T_s	308,201 K
P_std	760 mmHg

$$Q_{std} = 60 * (1 - 0,02) * 6,13 * 0,017671 * \left( \frac{293}{308,2} * \frac{766}{760} \right)$$

$$Q_{std} = 6,10828 \text{ dscm/min}$$

**Measurements sample train 1 entire charge**

E2515

$$\text{Equation (7_1)} \quad V_{mc} = V_m - (L_p - L_a) * \theta$$

**Weight of test fuel spacers, dry basis, kg**

E2780

$$\text{Equation (1)} \quad M_{Sdb} = (M_{Swb}) * \left( \frac{100}{100 + FM_s} \right)$$

M\_swb 0 kg (wet basis)  
 FM\_s 0 % (dry basis)

$$\begin{aligned} M_{Sdb} &= (0 / (100 + 0)) \text{ kg (dry basis)} \\ M_{Sbd} &= 0 \text{ kg (dry basis)} \end{aligned}$$

**Weight of test fuel crip, excluding nails and spacers, dry basis, kg**

E2780

$$\text{Equation (2)} \quad M_{Cdb} = \sum(M_{CPnw}) * \left( \frac{100}{100 + FM_{CPn}} \right)$$

M\_CPnw #REF! kg (wet basis)  
 FM\_CPN 0 % (dry basis)

$$\begin{aligned} M_{Cdb} &= \sum((#REF! / 100) / (100 + 0)) \text{ kg (dry basis)} \\ M_{Cdb} &= #REF! \text{ kg (dry basis)} \end{aligned}$$

**Density of fuel crip, excluding spacers and nails, dry basis, kg/m3**

E2780

$$\text{Equation (3)} \quad D_{Cdb} = \frac{M_{Cdb}}{V_c}$$

M\_Cdb #REF! kg (dry basis)  
 V\_C #N/A m3

$$\begin{aligned} D_{Cdb} &= #REF! / #N/A \text{ kg (dry) / m3} \\ D_{Cdb} &= #REF! \text{ kg (dry) / m3} \end{aligned}$$

**Total weight of fuel crip excluding nails, dry basis, kg**  
E2780

$$\text{Equation (4)} \quad M_{FTAdb} = M_{Sdb} + M_{Cdb}$$

$$\begin{array}{ll} M_{Sdb} & 0 \text{ kg (dry basis)} \\ M_{Cdb} & \#REF! \text{ kg (dry basis)} \end{array}$$

$$\begin{array}{lll} M_{FTAdb} & = & 0 \\ & + & \#REF! \text{ kg (dry basis)} \\ M_{FTAdb} & = & \#REF! \text{ kg (dry basis)} \end{array}$$

**Burn rate, kg (dry/h)**

E2780

$$\text{Equation (5)} \quad BR = \frac{60 * M_{FTAdb}}{\theta}$$

$$\begin{array}{ll} M_{FTAdb} & \#REF! \text{ kg (dry basis)} \\ \theta & 292,05 \text{ min} \end{array}$$

$$\begin{array}{ll} BR & = \frac{60}{292} \times \#REF! \\ BR & = \#REF! \end{array}$$

**Air velocity in tunnel at traverse measurements:**

E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

F_p	1,00 (Direkt)
K_p	34,97 -
C_p	0,99 -
ΔP_avg	2,66 mmVS
T_s	297,30 K
P_s	765,07 mmHg
M_s	29,00 g/g mole
P_Dynamisk	26,10 Pa
T_Kanal	24,30 °C
P_s	102010 Pa
Ps_Tryk	-40 Pa

$$V_s = 1,00 * 34,97 * 0,99 * (2,66)^{0,5} * \left( \frac{297,30}{765,07 * 29,00} \right)^{0,5}$$

$$V_s = 6,54 \text{ m/s (V_scent)}$$

**Pitot tube factor for center:**

E2515

$$\text{Equation (1)} \quad F_p = \frac{V_{strav}}{V_{scent}}$$

V_strav	6,01 m/s	(Average)
V_scent	6,54 m/s	(Average)

$$F_p = \frac{6,01}{6,54}$$

$$F_p = 0,9187 -$$

**Air velocity in dilution tunnel during test charge**

E2515

$$\text{Equation (9)} \quad V_s = F_p * K_p * C_p * \sqrt{\Delta P_{avg}} * \sqrt{\frac{T_s}{P_s * M_s}}$$

F_p	0,9187 -
K_p	34,97 -
C_p	0,99 -
Delta P_avg	2,62 mmVS
T_s	300,51 K
P_s	765,08 mmHg
M_s	29,00 g/g mole

$$V_s = 0,9187 * 34,97 * 0,99 * \left( 2,62 \right)^{0,5} * \left( \frac{300,51}{765,08 * 29,00} \right)^{0,5}$$

$$V_s = 5,99 \text{ m/s (V_scent)}$$

**Average gas flow rate in dilution tunnel:**

E2515

$$\text{Equation (3)} \quad Q_{std} = 60 * (1 - B_{ws}) * V_s * A * \left( \frac{T_{std} * P_s}{T_s * P_{std}} \right)$$

B_ws	0,02 -
V_s	5,988595 m/s
A	0,017671 m <sup>2</sup>
T_std	293 K
P_s	765,078 mmHg
T_s	300,5107 K
P_std	760 mmHg

$$Q_{std} = 60 * (1 - 0,02) * 5,988595 * 0,017671 * \left( \frac{293}{300,51} * \frac{765}{760} \right)$$

$$Q_{std} = 6,10765 \text{ dscm/min}$$

**Measurements sample train 1 entire charge**

E2515

$$\text{Equation (7_1)} \quad V_{mc} = V_m - (L_p - L_a) * \theta$$

$$\text{Equation (7)} \quad V_{mc(\text{std})} = K_1 * V_{mc} * Y * \left( \frac{P_{bar} + \frac{\Delta H}{13,6}}{T_m} \right)$$

 $BR$  dry burn rate, kg/h

E2515

Equation (9)	F_p K_p C_p $\Delta P_{avg}$ T_s P_s M_s V_s	- - - mmVC K mm Hg g/g mole m/s	Adjustment factor for center of tunnel pitot tube placement Pitot Tube Constant 34.97 m/sec Pitot tube coefficient, dimensionless (assigned a value of 0.99) Average velocity pressure in dilution tunnel, mm water Absolute average gas temperature in the dilution tunnel Absolute average gas static pressure in dilution tunnel The dilution tunnel dry gas molecular weight (may be assumed to be 29 g/g mole) Average gas velocity in the dilution tunnel
Equation (1)	F_p V_strav V_scent	- m/s m/s	Adjustment factor for center of tunnel pitot tube placement Average gas velocity calculated after the multipoint Pitot traverse Average gas velocity at the center of the dilution tunnel calculated after the Pitot tube traverse
Equation (3)	B_ws V_s A T_std P_s T_s P_std Q_std	- m/s m <sup>2</sup> K mm Hg K mmHg dscm/min	Water vapor in the gas steam, proportion by volume (assumed to be 0.02 (2.0%)) Average gas velocity in the dilution tunnel Cross-sectional area of tunnel Standard absolute temperature, 293K Absolute average gas static pressure in dilution tunnel Absolute average gas temperature in the dilution tunnel Standard absolute pressure, 760 mm Hg Average gas flow rate in dilution tunnel
Equation (7)	V_m L_p L_a $\theta$ V_mc K_1 Y P_Bar $\Delta H$ T_m V_mc(std)	dcm m <sup>3</sup> /min m <sup>3</sup> /min Min - K/mm Hg - mm Hg mmVC K dscm	Volume of gas sample as measured by dry gas meter Leakage rate observed during the post-test leakcheck Maximum acceptable leakage rate for either a retest or post-test leak-check, equal to 0.0003 m <sup>3</sup> /min Total sampling time $V_m - (L_p - L_a) * \theta$ 0.3855 K/mm Hg Dry gas meter calibration factor Barometric pressure at the sampling site. Average pressure at the outlet of the dry gas meter or the average differential pressure across the orifice meter Absolute average dry gas meter temperature Volume of air sample measured by the dry gas meter, corrected to standard conditions
Equation (12)	m_p m_f m_g m_n	mg mg mg mg	mass of particulate from probe mass of particulate from filters mass of particulate from gaskets Total amount of particulate matter collected
Equation (13)	K_2 m_n V_m(std) c_s	g/mg mg dscm g/dscm	0.001 Total amount of particulate matter collected Volume of gas sample measured by the dry gas meter, corrected to standard conditions Concentration of particulate matter in tunnel gas, dry basis, corrected to standard conditions
Equation (15)	c_s c_r Q_std $\theta$ E_T	g/dscm g/dscm dscm/min Min g	Concentration of particulate matter in tunnel gas, dry basis, corrected to standard conditions Concentration of particulate matter room air, dry basis, corrected to standard conditions Average gas flow rate in dilution tunnel Total sampling time Total particulate emissions
Equation (8)	K_1 V_mr Y P_bar $\Delta H$ T_m V_mr(std)	K/mm Hg dcm - mm Hg mmVC K dscm	0.3855 K/mm Hg Volume of room air sampled as measured by dry gas meter Dry gas meter calibration factor Barometric pressure at the sampling site. Average pressure at the outlet of the dry gas meter or the average differential pressure across the orifice meter Absolute average dry gas meter temperature Volume of room air sample measured by the dry gas meter, corrected to standard conditions
Equation (14)	K_2 m_r V_mr(std)	g/mg mg dscm	0.001 mass of particulate from the filter, filter gasket, and probe assembly from the room air blank filter holder assembly Volume of room air sample measured by the dry gas meter, corrected to standard conditions
Equation (16)	$\theta$ V_mi V_s T_m T_si V_m V_si T_s T_mi PR	Min dcm m/s K K dcm dcm K K -	Total sampling time Volume of gas sample as measured by dry gas meter during each 10-min interval, i, of the test run Average gas velocity in the dilution tunnel Absolute average dry gas meter temperature Absolute average gas temperature in the dilution tunnel during each 10-min interval, i, of the test run Volume of gas sample as measured by dry gas meter Volume of gas sampled as measured by dry gas meter during each 10-min interval, i, of the test run Absolute average gas temperature in the dilution tunnel Absolute average dry gas meter temperature during each 10-min interval, i, of the test run Proportional Rate Variation - Calculated PR for each 10-min interval, i, of the test run

## Annex 18

## Annex 24

Title: Materials data sheets

Pages total: 32, excl this cover page

**Basic/material**

E-glass.

**Description**

The basic material of the packing consists of 6-9 micron E-glass fiber strands, which are textured. The product is inorganic, sterile, refractory, and contains no toxins or heavy metals.

Thanks to a high-temperature treatment, the packing can be used up to 650 °C.

This treatment makes the packing retain its flexibility even with high temperature effects. At the same time, the black coating binds the loose fibers, and the packing retains its color throughout its lifetime.

**Dimensions and technical data**

Dimensions:	Ø 6-16 mm
Length:	50-150 mm
Temperature:	650 °C
Colour:	Black
Application:	Packing/sealing
Flammability:	Inflammable

# ROBAX® Glass Ceramic Panels

## 1. Description, Range of Application and Validity

### 1.1 Description

ROBAX® glass ceramic panels consist of a transparent glass ceramic material. Because of its material characteristics the product is designed for the use as thermal window in fireplaces. Other technical applications and shapes have to be proved separately.

### 1.2 Range of Application

This technical delivery specification applies to ROBAX® glass ceramic panels (delivery form: flat stock-size sheets, cut-to-size-panels and bent panels) for applications which require a low thermal expansion and transparency:

- electric, oil or gas stoves
- conventional heated fireplaces and room heaters (wood, coal, pellets, ...)
- baking ovens
- special applications on request

### 1.3 Range of Validity

This technical delivery specification applies to the commercial relationship between the Business Unit Home Tech and its customers.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 2. Technical Features

### 2.1 General Remarks

All data stated in this technical delivery specification are to be seen as guideline values.

Those values, for which no generally valid measuring method exist or which are not generally defined (e.g. by a technical standard), are specified and explained.

### 2.2 Appearance

- Transparent, slightly coloured due to the material composition and production process
- Surface appearance: plane, slightly textured due to the production process

### 2.3 Mechanical Characteristics

#### 2.3.1 Density

$\rho$	approx. 2.6 g / cm <sup>3</sup>
--------	---------------------------------

#### 2.3.2 Modulus of Elasticity

E	approx. $93 \times 10^3$ MPa
---	------------------------------

#### 2.3.3 Poisson's Ratio

$\mu$	approx. 0.25
-------	--------------

#### 2.3.4 Bending Strength

The bending strength testing is to be accomplished according to DIN EN 1288 part 5 (R45).

$\bar{\sigma}_{bB}$	approx. 35 MPa
---------------------	----------------

#### 2.3.5 Impact Resistance

The impact resistance of ROBAX® depends on the kind of installation, the size and thickness of the panel, the kind of impact, the geometry of the panel and especially here on the drilled holes and their position on the ROBAX® panel.

Therefore information regarding the impact resistance can only be given with knowledge of the respective application (especially in combination with the technical standards regarding impact resistance that have to be met for single applications). Corresponding guideline values on request.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 2.4 Thermal Characteristics

### 2.4.1 Coefficient of Mean Linear Expansion

$\alpha_{(20 - 700^\circ\text{C})}$   $(0 \pm 0.5) \times 10^{-6} / \text{K}$

### 2.4.2 Mean Specific Thermal Capacity

$C_p(20 - 100^\circ\text{C})$  approx.  $0.8 \times 10^3 \text{ J} / (\text{kg} \cdot \text{K})$

### 2.4.3 Thermal Conductivity

$\lambda_{(90^\circ\text{C})}$  approx.  $1.6 \text{ W} / (\text{m} \cdot \text{K})$

### 2.4.4 Resistance to Temperature Differences (RTD)

Resistance of the panel to temperature differences between heated zone and cold panel edge (room temperature).

No cracking due to thermal stress at  $T_{es, max}^{1)}$   $\leq 700^\circ\text{C}$

### 2.4.5 Thermal Shock Resistance

Resistance of the panel to thermal shock when the hot panel is quenched with cold water (room temperature).

No cracking due to thermal stress at  $T_{es, max}^{1)}$   $\leq 700^\circ\text{C}$

### 2.4.6 Temperature / Time Load Capacity

(under consideration of items 2.4.4 and 2.4.5)

The temperature / time load capacity specifies the maximum permissible temperature for given load times for the fireplace panels, below which no cracking due to thermal stress occurs.

The value pairs specified in the following table 2.1 are relevant to the practical use of the glass ceramic material as fireplace panel. The temperature values refer to the hottest point on the exterior side of the panel ( $T_{es, max}$ ) because this temperature can be measured more easily and more reliably.

<sup>1)</sup>  $T_{es, max}$ : Maximum temperature on the exterior side of the panel, that means the reverse side of the heat source, at the hottest point

# ROBAX® Glass Ceramic Panels

Load temperature $T_{es, max}^1)$	Load time
560°C (1040°F)	5000 hr
610°C (1130°F)	1000 hr
660°C (1220°F)	100 hr
710°C (1310°F)	10 hr
760°C (1400°F)	5 hr

Table 2.1: Temperature / time load capacity for ROBAX® panels

**Note:**

For ROBAX® fireplace panels the temperature / time load capacity specified in table 2.1 must be maintained. It must be ensured that this temperature / time load capacity is not exceeded during use, to prevent cracking due to thermal stress.

The temperature / time load data for even temperature distributions within an entire glass ceramic panel (e.g. homogeneous heating conditions in a testing furnace) are given in table 2.2. This data is to be seen purely as characteristic data for the glass ceramic material itself. It is not typical for use of the glass ceramic material as fireplace panels, which have a temperature distribution totally different from evenness. The temperatures refer to the homogeneous heating of the ROBAX® panel ( $T_{hom}$ ).

Load temperature $T_{hom}^2)$	Load time
700°C (1292°F)	6000 hr
750°C (1382°F)	750 hr
775°C (1427°F)	275 hr
800°C (1472°F)	100 hr
825°C (1517°F)	35 hr

Table 2.2: Temperature / time load capacity for uniformly heated ROBAX® panels

<sup>1)</sup>  $T_{es, max}$ : Maximum temperature on the exterior side of the panel, that means the reverse side of the heat source, at the hottest point

<sup>2)</sup>  $T_{hom}$ : Homogenous temperature, i.e. material temperature under homogeneous heating conditions

# ROBAX® Glass Ceramic Panels

## 2.5 Chemical Characteristics of Base Material

### 2.5.1 Acid Resistance

DIN 12116 at least class S3

### 2.5.2 Alkaline Resistance

based on ISO 695 at least class A2

### 2.5.3 Hydrolytic Class

DIN ISO 719 class HGB 1

### 2.5.4 Change of Surface due to Use

ROBAX® has a good resistance against chemical surface attack. In isolated cases and under special critical conditions, e.g. aggressive exhaust gases (acidification at high temperatures) changes of the surface may occur. For such applications practice tests have to be carried out before being used.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

### 3. General Dimensional Tolerances and Material Characteristics

The following describes characteristics which are valid for all four product groups (stock-size sheets, cut-to-size panels, round bent and angular bent panels). With regard to stock-size sheets all of the following characteristics (with exception of flatness, see item 4.1) refer to the net-size as agreed on with the customer.

#### 3.1 Dimensional Tolerances

Characteristics / Areas / Location	Tolerance
Thickness $t$ $t = 3.0 / 4.0 / 5.0 \text{ mm}$	$\pm 0.2 \text{ mm}$

Table 3.1: Dimensional tolerances

#### 3.2 Material Characteristics

Visual inspection in the normal installation position without visual aids and illumination of approx. 800 Lux when viewed from a minimum distance of 1 m.

The inspection shall be executed with a background in the colour of fireclay bricks:  
Light ivory RAL-1015.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 3.2.1 Bubbles

Bubbles are gaseous inclusions within the glass ceramic material. Closed bubbles can appear as low-spots on the surface depending on their size and position within the glass. Open bubbles are open towards the panel surface and are not permissible if bigger than 1 mm. The production of material totally free of bubbles is not possible due to the production process. Table 3.2 contains the permissible number of closed bubbles in dependence of their length and the panel size.

Characteristic's Length $L$ [mm]	Panel Size A			
	$A \leq 20 \text{ dm}^2$	$20 \text{ dm}^2 < A \leq 40 \text{ dm}^2$	$40 \text{ dm}^2 < A \leq 80 \text{ dm}^2$	$80 \text{ dm}^2 < A \leq 150 \text{ dm}^2$
$L \leq 1.0$	unconsidered	unconsidered	unconsidered	unconsidered
$1.0 < L \leq 2.0$	2 <sup>1)</sup>	6 <sup>1)</sup>	12 <sup>1)</sup>	33
$2.0 < L \leq 4.0$	1 <sup>1)</sup>	2 <sup>1)</sup>	4 <sup>1)</sup>	20
$4.0 < L \leq 8.0$	0	0	0	13
$8.0 < L$	0	0	0	0

<sup>1)</sup> The distance between two adjacent characteristics must be minimum 200 mm.

Table 3.2: Permissible number of closed bubbles per panel

## 3.2.2 Solid Inclusions and Stains

Solid inclusions are inhomogeneities within the glass ceramic material. Stains are deviations of the surface which are easily visible under normal inspection conditions. Both characteristics cannot be completely avoided due to the production process. Table 3.3 contains the permissible number of solid inclusions and stains in dependence of their length and the panel size.

Characteristic's Length $L$ [mm]	Panel Size A			
	$A \leq 20 \text{ dm}^2$	$20 \text{ dm}^2 < A \leq 40 \text{ dm}^2$	$40 \text{ dm}^2 < A \leq 80 \text{ dm}^2$	$80 \text{ dm}^2 < A \leq 150 \text{ dm}^2$
$L \leq 0.5$	unconsidered	unconsidered	unconsidered	unconsidered
$0.5 < L \leq 2.0$	0	3 <sup>1)</sup>	6 <sup>1)</sup>	30
$2.0 < L \leq 4.0$	0	0	1 <sup>1)</sup>	3
$4.0 < L$	0	0	0	0

<sup>1)</sup> The distance between two adjacent characteristics must be minimum 200 mm.

Table 3.3: Permissible number of solid inclusions and stains per panel

# ROBAX® Glass Ceramic Panels

### 3.2.3 Scratches

The delivery of ROBAX® panels totally free of scratches is not possible due to technical reasons. It has to be distinguished between slight scratches (scratches not detectable with finger nail) and strong scratches (scratches detectable with finger nail). Table 3.4 contains the permissible number of scratches in dependence of their length and the panel size.

Characteristic's Length $L$ [mm]	Panel Size A			
	$A \leq 20 \text{ dm}^2$	$20 \text{ dm}^2 < A \leq 40 \text{ dm}^2$	$40 \text{ dm}^2 < A \leq 80 \text{ dm}^2$	$80 \text{ dm}^2 < A \leq 150 \text{ dm}^2$
<b>Slight Scratches:</b> $L \leq 10$ $10 < L$	unconsidered 1 <sup>1)</sup>	unconsidered 2 <sup>1)</sup>	unconsidered 4 <sup>1)</sup>	unconsidered 20
<b>Strong Scratches:</b> $L \leq 10$ $10 < L$	1 <sup>1)</sup> 0	2 <sup>1)</sup> 0	4 <sup>1)</sup> 0	20 0

<sup>1)</sup> The distance between two adjacent characteristics must be minimum 200 mm.

Table 3.4: Permissible number of scratches per panel

### 3.2.4 Pits

ROBAX® panels may show pits. These pits must not be recognizable during a visual inspection according to the conditions for visual inspections as described in item 3.2.

### 3.2.5 Other Characteristics

If the panel - when inspected according to the conditions for visual inspections as described in item 3.2 - shows a number of defects which impair the aesthetic appearance SCHOTT and the customer will agree on limit values for the respective characteristics and, if necessary, limit samples will be defined.

# ROBAX® Glass Ceramic Panels

## 4. Stock-Size Sheets

Stock-size sheets are large-size glass ceramic panels without any further processing, especially without edge processing. They serve as base material for cut-to-size panels.

### 4.1 Dimensional Tolerances

Characteristics / Areas / Location	Tolerance
<b>Edge length of stock-size sheet</b>  Usable length: Usable width:	at least 1580 mm at least 840 mm
<b>Flatness of stock-size sheet</b>  Flatness	≤ 0.3 % × measuring length (Measuring length at least 500 mm)

Table 4.1: Dimensional tolerances for stock-size sheets

### 4.2 Material Characteristics

The material characteristics comply with the specifications of item 3.2, incl. subitems.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 5. Cut-to-Size Panels

### 5.1 Dimensional Tolerances

Characteristics / Areas / Location	Tolerance
<b>Edge length <math>l</math></b> $l \leq 500 \text{ mm}$ $l > 500 \text{ mm}$ Special designs (contour shapes)	$\pm 1.0 \text{ mm}$ $\pm 1.5 \text{ mm}$ as per separate agreement
<b>Corner radius <math>r</math></b> $r \leq 20 \text{ mm}$ $r > 20 \text{ mm}$	$\pm 1.5 \text{ mm}$ $\pm 2.0 \text{ mm}$
<b>Squareness of cut-to-size panels <math>a</math></b> (according to <u>fig. 5.1</u> ) Edge length $\leq 500 \text{ mm}$ Edge length $> 500 \text{ mm}$	$a \leq 1.0 \text{ mm}$ $a \leq 1.5 \text{ mm}$
<b>Flatness of cut-to-size panels</b> Flatness	$\leq 0.3\% \times D$ $D$ : diagonal of cut-to-size panel
<b>Drilled hole diameter <math>d_H</math></b> $4 \text{ mm} \leq d_H \leq 20 \text{ mm}$ $20 \text{ mm} < d_H \leq 60 \text{ mm}$	$\pm 0.2 \text{ mm}$ $\pm 0.5 \text{ mm}$
<b>Position of drilled hole</b> <ul style="list-style-type: none"> <li>Deviation between drilled hole centre axis and panel centre axis</li> <li>Deviation between drilled hole centre axis of adjacent drilled holes (max. distance 500 mm)</li> </ul>	$\pm 1.5 \text{ mm}$ $\pm 1.0 \text{ mm}$

Table 5.1: Dimensional tolerances for cut-to-size panels

registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

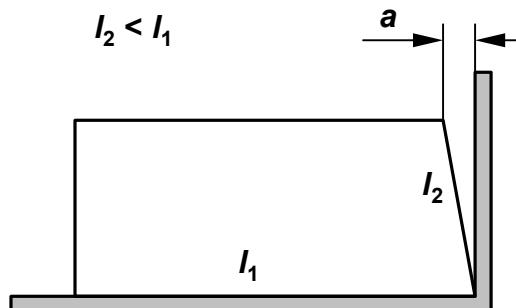

Fig. 5.1: Squareness measurement

## 5.2 Edge Finish

The edges of flat cut-to-size panels are processed according to DIN 1249, e.g. either arrissed or round ground to size.

ROBAX® panels may show small chippings at the edges. The maximum permissible size of these chippings is 1.5 mm when measured from the outer edge of the panel.

ROBAX® panels with V-shaped edge defects are not permissible.

## 5.3 Material Characteristics

The material characteristics comply with the specifications of item 3.2, incl. subitems.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 6. Round Bent Panels

### 6.1 Dimensional and Form Tolerances

Characteristics / Areas / Location	Tolerance
<b>Panel height <math>h</math></b>  $h \leq 500 \text{ mm}$ $500 \text{ mm} < h \leq 600 \text{ mm}$ $600 \text{ mm} < h$	$\pm 1.0 \text{ mm}$ $\pm 1.5 \text{ mm}$ Determination according to initial sample
<b>Arc length <math>l_A</math></b>  $l_A \leq 500 \text{ mm}$ $l_A > 500 \text{ mm}$	$\pm 1.5 \text{ mm}$ $\pm 2.0 \text{ mm}$
<b>Corner radius <math>r</math></b>  $r \leq 20 \text{ mm}$ $r > 20 \text{ mm}$	$\pm 1.5 \text{ mm}$ $\pm 2.0 \text{ mm}$
<b>Sagging at panel edge <math>s_h</math></b>  $h \leq 500 \text{ mm}$ $500 \text{ mm} < h \leq 600 \text{ mm}$ $600 \text{ mm} < h$	$s_h \leq 1.5 \text{ mm}$ $s_h \leq 2.0 \text{ mm}$ Determination according to initial sample
<b>Drilled hole diameter <math>d_H</math></b>  $4 \text{ mm} \leq d_H \leq 20 \text{ mm}$ $20 \text{ mm} < d_H \leq 60 \text{ mm}$	$\pm 0.2 \text{ mm}$ $\pm 0.5 \text{ mm}$
<b>Position of drilled hole</b>  <ul style="list-style-type: none"> <li>• Deviation between drilled hole centre axis and panel centre axis</li> <li>• Deviation between drilled hole centre axis of adjacent drilled holes (max. distance 500 mm)</li> </ul>	$\pm 1.5 \text{ mm}$  $\pm 1.0 \text{ mm}$

Table 6.1: Dimensional and form tolerances for round bent panels (see also fig. 6.1)

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

Table 6.2 contains the permissible overall torsion values of round bent panels.

	Panel Size A		
	$A \leq 20 \text{ dm}^2$	$20 \text{ dm}^2 < A \leq 40 \text{ dm}^2$	$40 \text{ dm}^2 < A$
Permissible overall torsion $s_T$ [mm]	2.5	4	5

Table 6.2: Permissible overall torsion of round bent panels (see also fig. 6.1)

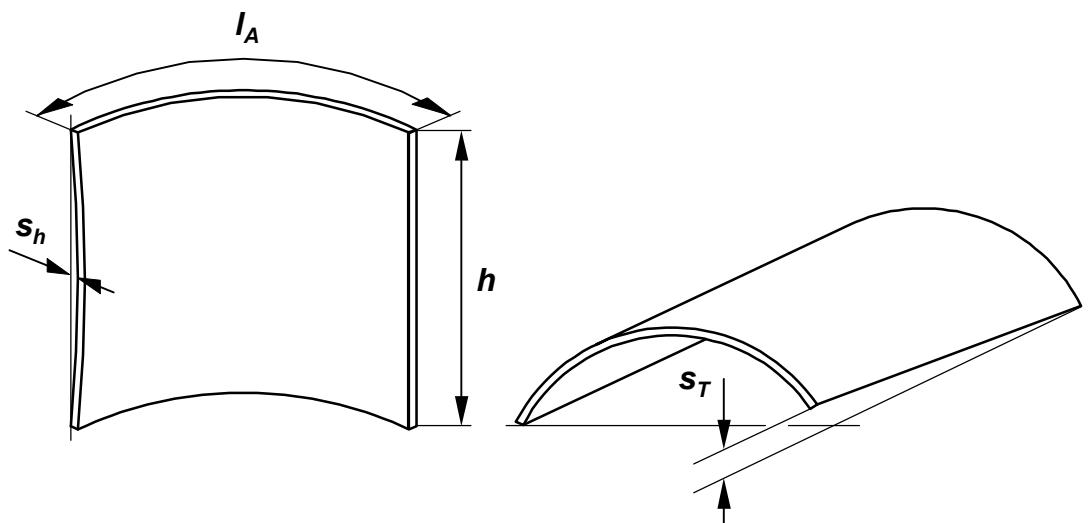

Fig. 6.1: Round bent ROBAX® panels

All geometric tolerances are specified by means of a two-dimensional enveloping contour. For testing the geometric tolerances a flat plastic gauge with a defined contour slot is used. The geometry of the contour slot is determined by the radius of curvature of the panel  $R_{soll}$ , by the arc length  $I_A$  and by the tolerance of the contour slot widths  $s_i$ ,  $s_a$  (see fig. 6.2). If required the drawing of the contour slot gauge can be provided for the customer.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

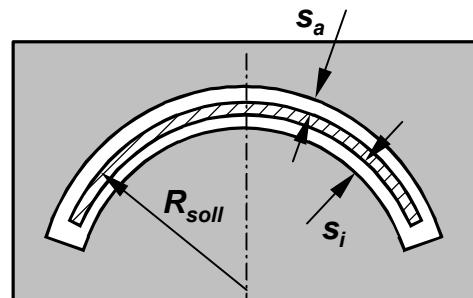

Fig. 6.2: Contour slot gauge geometry for round bent ROBAX® panels

The tolerances of the contour slot widths for round bent panels are given in table 6.3.

Aperture angle $\alpha_B$	Arc length $I_A$					
	185 mm < $I_A \leq 400$ mm		400 mm < $I_A \leq 600$ mm		600 mm < $I_A \leq 1100$ mm	
	$s_i$	$s_a$	$s_i$	$s_a$	$s_i$	$s_a$
$\alpha_B \leq 130^\circ$	1.0 mm	1.0 mm	1.25 mm	1.25 mm	1.25 mm	1.25 mm
$130^\circ < \alpha_B \leq 180^\circ$	1.25 mm	1.25 mm	1.5 mm	1.5 mm	1.5 mm	1.5 mm

Table 6.3: Tolerances of the contour slot widths  $s_i$ ,  $s_a$  for round bent panels

The glass ceramic panel must easily fit into the contour slot gauge.

## 6.2 Material Characteristics

The material characteristics comply with the specifications of item 3.2, incl. subitems.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

All geometric tolerances are specified by means of a two-dimensional enveloping contour. For testing the geometric tolerances a flat plastic gauge with a defined contour slot is used. The geometry of the slot is determined by the edge lengths  $I_1$ ,  $I_2$ , and  $I_3$ , by the bending angle  $\alpha_w$  and by the tolerances of the contour slot widths  $s_i$ ,  $s_a$  (see fig. 7.1, 7.2, 7.3 and 7.4). If required the drawing of the contour slot gauge can be provided for the customer.

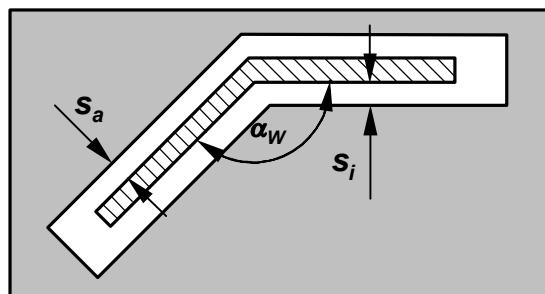

Fig. 7.3: Contour slot gauge geometry for single angular bent ROBAX® panels

The tolerances of the contour slot widths for single angular bent panels are given in table 7.3.

Bending angle $\alpha_w$	Sum of leg lengths $L$					
	180 mm < $L \leq 440$ mm		440 mm < $L \leq 900$ mm		900 mm < $L \leq 1300$ mm	
	$s_i$	$s_a$	$s_i$	$s_a$	$s_i$	$s_a$
$90^\circ < \alpha_w \leq 160^\circ$	1.0 mm	1.0 mm	1.5 mm	1.5 mm	2.0 mm	2.0 mm

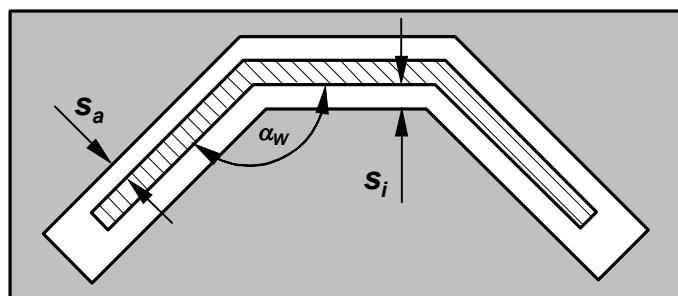

Table 7.3: Tolerances of the contour slot widths  $s_i$ ,  $s_a$  for single angular bent panels

The glass ceramic panel must easily fit into the slot gauge.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

The contour slot gauge geometry as shown in [fig. 7.4](#) is valid for double angular bent panels.

[Abb. 7.4:](#) Slot gauge geometry for double angular bent ROBAX® panels

The tolerances of the contour slot widths for double angular bent panels are given in [table 7.4](#):

Bending angle $\alpha_w$	Longest leg length $I_{max}$					
	30 mm < $I \leq 100$ mm		100 mm < $I \leq 200$ mm		200 mm < $I \leq 340$ mm	
	$s_i$	$s_a$	$s_i$	$s_a$	$s_i$	$s_a$
$110^\circ < \alpha_w$	1.0 mm	1.0 mm	1.25 mm	1.25 mm	1.5 mm	1.5 mm

[Table 7.4:](#) Tolerances of the contour slot widths  $s_i$ ,  $s_a$  for double angular bent panels

The glass ceramic panel must easily fit into the slot gauge.

## 7.2 Material Characteristics

The material characteristics comply with the specifications of item 3.2, incl. subitems.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 8. Transport, Storage and Handling

To avoid damage, it is necessary for the panels to be handled properly as well as transported and stored only vertically secured, and protected against touching each other by suitable intermediate layers (paper, cardboard, cork or PE foamfoils).

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 9. Installation Guidelines

The same conditions apply to the installation and the handling of ROBAX® panels as are generally valid for handling glass and glass ceramic parts.

- The **different thermal expansion** between the various frame materials and the ROBAX® panel has to be taken into account for the complete construction. Furthermore the possible production tolerances of frame and panel have to be considered.
- For installation it is necessary to use a sufficiently **low distortion frame construction**. As a minimal distortion of the frame construction cannot be excluded a **temperature stable, permanently resilient gasket** (e.g. fibre glass cloth or mineral fibre cloth) is required in order to prevent any transfer of distortions from the frame construction onto the ROBAX® panel. Any direct contact between glass ceramics and metal has to be avoided.
- If for constructive reasons a pressing of the panel in the frame is required the **contact pressure must be applied uniformly (never at points only)** over the entire edge area of the panel.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

# ROBAX® Glass Ceramic Panels

## 10. Procedures if Deviations Occur

### 10.1 Basic Action

Deviations should be handled in the most cost-effective manner for both partners. Deviations are estimated according to the state of the products at time of delivery. Changes in the material which occur during further processing of ROBAX® glass ceramic panels exclude warranty claims of the recipient against SCHOTT.

### 10.2 Obligation of Recipient to Provide Information

SCHOTT requires the following data for reporting, testing and evaluating deviations:

- SCHOTT order number
- Pallet voucher with production order number
- Warehouse unit number
- Delivery quantity affected
- Complaint quantity with article number
- Reasons for complaint
- Results of random sample tests

### 10.3 Recipient's Storage Obligation

All parts with characteristic values deviating from the specifications and complained about by the recipient must be stored by the recipient until final clarification of the facts and made available to SCHOTT upon request. If such parts are scrapped by the recipient without written authorization from SCHOTT or if they are no longer available for other reasons, all warranty rights regarding such parts shall be null and void.

ROBAX®  
registered trademark(s) of SCHOTT AG, Mainz, Germany.

**Round packing with or without core****Basic/material**

E-glass.

**Description**

The basic material consists of 6-9 micron E-glass fiber yarns which are texturized.

The product is inorganic, sterile, refractory, and contains no toxins or heavy metals. It is a knitted glass fiber packing – with or without core – made of E-glass.

It is a heavy packing, so you get a more stable packing, e.g. for wood-burning stove doors. The packing is suitable as a door seal in stoves and sealing flues.

**Dimensions and technical data**

Dimensions:	Ø 3-50 mm
Length:	50/100 mm
Temperature:	550 °C
Colour:	White / Antracit
Application:	Packing/seal
Flammability:	Inflammable

**Basic/material**

E-glass.

**Description**

The basic material consists of 6-9 micron E-glass fiber yarns which are texturized.

The product is inorganic, sterile, refractory, and contains no toxins or heavy metals.

A knitted fiberglass tape has a great packing surface – with less packing thickness. This makes the tape suitable for packing glass in stoves, where usually there is no room for a round seal.

A ladder tape is a knitted fiberglass tape with a ladder in the middle. That is, on the middle, there are only transverse strands.

This makes it particularly suitable for packing of the glass in the stove, as the tape packs on both sides simultaneously.

The packing is available with self-adhesive tape for easy installation.

**Dimensions and technical data**

Dimension: 8x2 mm - 25x3 mm

Length: 50 / 100 mm

Temperature: 550 °C

Colour: Antracit

Tape: Yes

Application: Packing / sealing

Flammability: Inflammable

## INSULFRAX LTX BLANKET

### Description

Insulfrax® LTX™ Blankets are the latest addition to the Insulfrax product family. Insulfrax LTX offers the same benefits as previous Insulfrax blankets, now with physical properties enhanced to improve both thermal performance and handling. These lightweight needled blankets combine innovative proprietary technology with Insulfrax proven performance to create the best low-biopersistent Insulfrax blanket available from Insulcon today. Insulfrax LTX blankets are manufactured from alkaline earth silicate (AES) wool, and provide effective solutions to a variety of thermal management challenges.

The new Insulfrax LTX products can help customers reduce costs. The enhanced LTX fibre performance helps companies reduce their energy costs and meet increasingly strict carbon emission targets, without increasing the amount of insulation required. Alternatively, customers can save on material costs by using less insulation to achieve the same performance as standard AES blankets. Customers can save money by reducing their lining thickness up to 25%, freeing up valuable space in furnaces and ovens.

Insulfrax LTX Blankets are completely inorganic and binder free with an improved, smoother surface finish. Insulfrax LTX Blankets retain their strength, flexibility and thermal properties in many working environments without the generation of smoke or fumes. These new blankets are less dusty, which makes handling and cutting the material easier, resulting in faster installation of the product onsite and, in some cases, reduced waste of material. Insulfrax LTX Blankets are also printed on the surface of the blanket, which makes installation tracking and inspection on the job site or in the fabrication shop easier.

Available in a range of density and thickness combinations, Insulfrax LTX Blankets can be used in a wide variety of applications and are especially suited for use as high-temperature gaskets, wraps and heat shields.

### General Characteristics

Insulfrax LTX Blanket products have the following outstanding characteristics:

- Exceptional insulating properties
- High temperature stability (up to 1200°C)
- Resistance to thermal shock
- High tensile strength & resiliency
- Lightweight
- Excellent flexibility
- Good acoustic properties

### Typical Applications

Insulfrax LTX Blankets are the next generation of low biopersistent Insulfrax fiber and the product of choice for a wide range of applications in a number of industries including:

#### Appliances

- Residential self-cleaning ovens
- High-temperature commercial cooking appliances

#### Hearth Products

- Chimney Insulation

Colour		sand

Data are average results of tests conducted under standard procedures and are subject to variation. Data contained in this data sheet are supplied in good faith as a technical service and are subject to change without notice. Misprint and errors excepted.

## Annex 25

Title: Labels

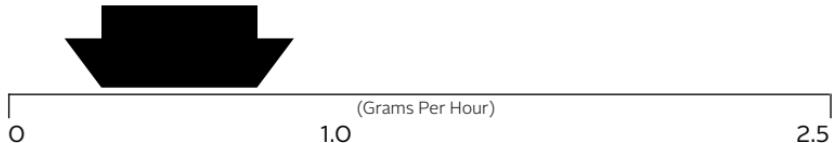

Pages total: 2, excl this cover page

Manufactured by: Morsø  
Model: zB Standard 2020

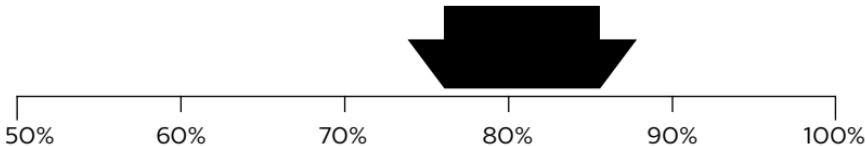

U.S. ENVIRONMENTAL PROTECTION AGENCY

Certified to comply with 2020 particulate emission standards using cord wood.

**SMOKE**  
THIS MODEL

**EFFICIENCY**

Particulate emission using ASTM E3053-17 cordwood test method:

**Emission**  
**0.55 g/h**

Wood heaters with higher efficiencies cost less to operate.

**HEAT OUTPUT**  
**6,959 to 25,299 Btu/Hr**

Use this to choose the right size appliance for your needs.  
ASK DEALER FOR HELP

This wood heater needs periodic inspection and repair for proper operation. Consult the owner's manual for further information. It is against federal regulations to operate this wood heater in a manner inconsistent with the operating instructions in the owner's manual.

Read this entire manual before you install and use your new room heater. If this room heater is not properly installed, a house fire may result. To reduce the risk of fire, follow the installation instructions. Failure to follow instructions may result in property damage, bodily injury, or even death.

Contact local building officials about restrictions and installation inspection requirements in your area.

Save these instructions

## Optional Accessories

A wide range of accessories (such as handling gloves, fireside tools, glass cleaner and heat-proof paint) are available for use with your Morsø stove. They help with day-to-day running and maintenance. Contact your Morsø dealer for more information.

The Morsø 2B Standard 2020 have been tested by OMNI-Test Laboratories, Inc. The test standards are UL-1482-2012 (R2015) for the United States and ULC-S627-00 for Canada.

**The stove is listed for burning wood only. Do not burn other fuels.**

U.S. ENVIRONMENTAL PROTECTION AGENCY. Certified to comply with 2020 particulate emission standards using cord wood.

Average particulate emission using ASTM E3053-17 cord wood test method is 0.55 g/h Under specific test conditions this heater has been shown to deliver heat at rates ranging from 6,959 to 25,299 Btu/hr.

This appliance was determined to have an average higher heating efficiency value of 80.2% when tested in accordance with CSA B415.1

This wood heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual.

We suggest that our woodburning hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Woodburning Specialists or who are certified in Canada by Wood Energy Technical Training (WETT).

## Cast iron

Cast iron is a live material. There are no two ovens that are identical. This is partly due to the tolerances of the casting process, partly because the ovens are a work of craftsmanship. Minor unevennesses may also occur in the cast iron surface.

## 1.0 Installation of your Morsø stove

Installation of woodburning stoves must be safe and legal.

If your Morsø stove is not installed correctly, it may cause a house fire. To reduce the risk of fire, the installation instructions must be followed carefully. Contact the local building officials about restrictions and installation inspection in your area.

Before you start installing your stove, make sure that:

- The stove and chimney connection are placed far enough from combustible materials to meet all clearance requirements.
- The floor protection must be adequate and must be made correctly according to 'the requirements.

All necessary approvals are needed from the local building officials.

The data plate, which is located on the back of the stove, provides information regarding safety testing information, name of certified testing laboratory, and installation requirements.

Installation requirements vary in different districts, and the local building officials have the final authorization to approve your installation. You should discuss the installation with them before beginning. Please ask your dealer for further information.

**Do not connect to any air distribution duct or system.**

**Important: If the installation instructions are not followed carefully, it may cause dangerous situations like chimney - and house fires. Follow the instructions carefully and do not deviate from them as it may cause injuries to people or property.**

### 1.1 Unpacking the stove

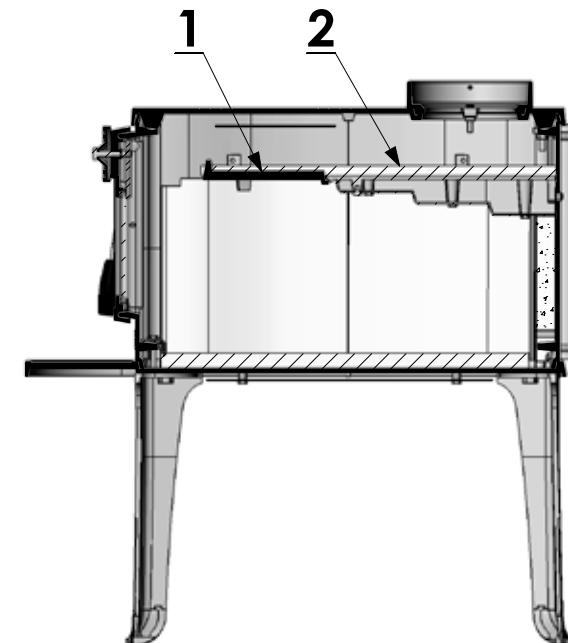

2B Standard: After removing the outer packaging, flatten it and lay onto the floor close to the stove; this can then act as protective work surface during the assembly process.

Next, remove the legs and bolts from inside the stove. Gently lay the stove onto its back and unscrew it from the wooden pallet. Using the bolts supplied, now screw the legs into position on the underside of the base. The stove should now be lifted and moved into the upright position, avoiding excess load on the back legs. Do not use the bolts used for securing the fire chamber to the wooden pallet.

### 1.2 Checking loose parts in the stove

After unpacking, check that the fire bricks are firmly in position and have not shifted in transit. Check also that the air control works freely.

Before starting the initial fire, make sure that the baffle (1) and insulation (2) over the baffle are placed correctly, as shown on the images below.

## How to fit the Vertical Baffle

Lead the vertical baffle through the door as shown below (picture 1 & 2). Place the baffle into the right position (picture 3 & 4). The baffle insulation is placed on the baffle.

## Standard Accessories

A Morsø glove and ceramic flue connection gasket are standard accessories that usually can be found in the ashpan or firebox area.

## 1.3 The chimney / flue system

Note that the flue system must be independently secured and must not rely on the stove for support.

The stove must not be connected to a chimney flue serving any other appliance.  
(Several flues may run up a single chimney stack; use one flueway per appliance).

Use a residential type masonry or listed type HT factory-built chimney.

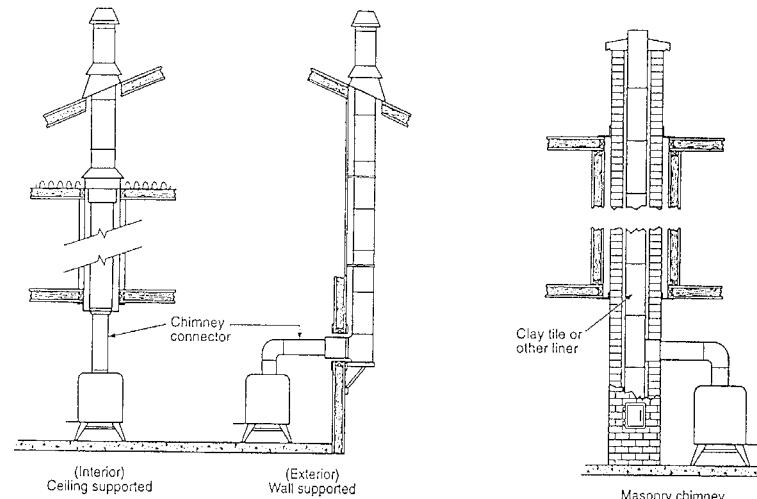

High Temperature (H.T.) Chimney Standard UL-103-1985 (2100° F.) or a code-approved masonry chimney with flue liner for the USA, and High Temperature (650°C) Standard ULC S-62g for Canada.

The internal dimensions of the chimney connector and chimney must not be less than 6 inches diameter (or equivalent cross section), and should not be significantly larger than this. Too large a section will tend to allow the flue gases to cool excessively, causing sluggishness or unpredictability in the stove's performance.

We recommend the length of the chimney system should be at least 16 feet (not required) above the stove in normal domestic situations, measured from the flue collar to the top of the chimney.

Local conditions like for example - roof constructions, large trees nearby and high altitude, may influence the chimney draft and height. Therefore, contact the local professional chimney sweep or your Morsø dealer.

### Typical Factory-Built or Masonry Chimney Installations

## 1.4 Flue Connection

A flue collar is placed in the firebox area.

Use a 24 MSG black or blue chimney connector or listed double wall chimney connector. Refer to local codes and the chimney manufacturer's instructions for precautions required for passing a chimney through a combustible wall or ceiling. Remember to secure the chimney connector with a minimum of three screws to the product and to each adjoining section. Position the stove and connect to the flue system.

**Wear gloves and protective eyewear when drilling, cutting or joining sections of chimney connector.**

## 1.5 Connection to the existing chimney

A chimney connector is the double-wall or single-wall pipe that connects the stove to the chimney. The chimney itself is the masonry or prefabricated structure that encloses the flue. Chimney connectors are used only to connect the stove to the chimney.

Double-wall connectors must be tested and listed for use with solid-fuel burning appliances. Single-wall connectors should be made of 24 gauge or heavier gauge steel. Do not use galvanized connector; it cannot withstand the high-temperatures that smoke and exhaust gases can reach, and may release toxic fumes under high heat. The connector must be 6 inches (150mm) in diameter.

**If possible, do not pass the chimney connector through a combustible wall or ceiling. If passage through a combustible wall is unavoidable, refer to the sections on Wall Pass-Throughs. Do not pass the connector through an attic, a closet or similar concealed space when installing the chimney connectors.**

It is important to keep the flue gases moving smoothly in the right direction. Do not vent into a large void at this location; rather form one continuous section all the way up. Use mild bends (e.g. 45° vs. 90°) rather than sharp angles where a change of direction is required. All parts of the venting must be accessible for cleaning purposes.

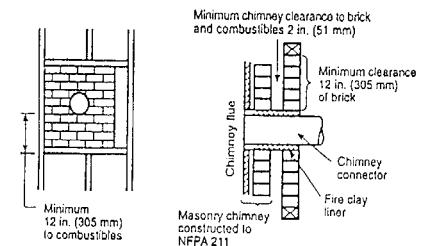

In horizontal runs of chimney, maintain a distance of 18 inches from the ceiling. Keep it as short and direct as possible, with no more than two 90 degree turns. Slope horizontal runs of connector upward 1/4 inch per foot (20 mm per metre) going from the stove toward the chimney. The recommended maximum length of a horizontal run is 3 feet (1 metre), and the total length should be no longer than 8 feet (2.5 metres).

Information on assembling and installing connectors is provided by the manufacturer's instructions exactly as you assemble the connector and attach it to the stove and chimney.

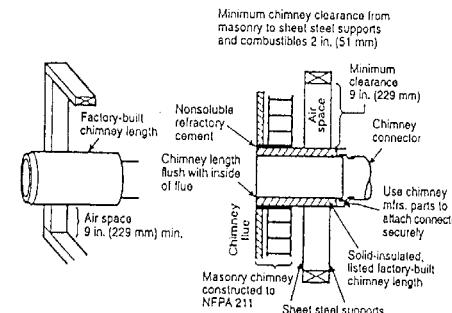

**Be sure the installed stove and chimney connector are correct distances from near by combustible materials. See the clearance paragraph page 11.**

Where passage through a wall or partition of combustible construction is desired, the installation shall conform to CAN/CSA-B365.

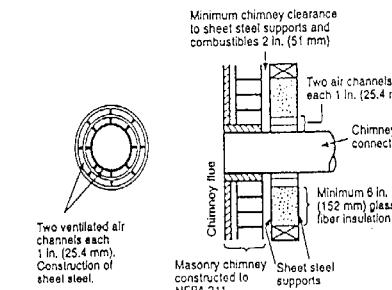

## Chimney Connector Systems and Clearances from Combustible Walls for Residential Heating Appliances

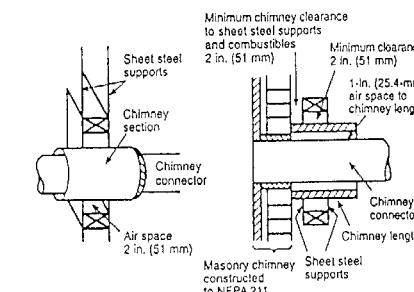

- A Minimum 3.5-in thick brick masonry all framed into combustible wall with a minimum of 12-in brick separation from clay liner to combustibles. The fireclay liner shall run from outer surface of brick wall to, but not beyond, the inner surface of chimney flue liner and shall be firmly cemented in place.

- B Solid-insulated, listed factory-built chimney length of the same inside diameter as the chimney connector and having 1-in. or more of insulation with a minimum 9-in. air space between the outer wall of the chimney length and combustibles.

- C Sheet steel chimney connector, minimum 24 gauge in thickness, with a ventilated thimble, minimum 24 gauge in thickness, having two 1-in. air channels, separated from combustibles by a minimum of 6-in. of glass fiber insulation. Opening shall be covered, and thimble supported with a sheet steel support, minimum 24 gauge in thickness.

- D Solid insulated, listed factory-built chimney length with an inside diameter 2-in. larger than the chimney connector and having 1-in. or more of insulation, serving as a pass-through for a single wall sheet steel chimney connector of minimum 24 gauge thickness, with a minimum 2-in. air space between the outer wall of chimney section and combustibles. Minimum length of chimney section shall be 12-in. chimney section spaced 1-in. away from connector using sheet steel support plates on both ends of chimney section. Opening shall be covered, and chimney section supported on both sides with sheet steel supports securely fastened to wall surfaces of minimum 24 gauge thickness. Fasteners used to secure chimney section shall not penetrate chimney flue liner.

## 1.6 Positioning the stove

### Distance to walls and lintel

When the stove is positioned near combustible materials, observe all current local and national building regulations with regards to clearances. Whatever regulations apply to your area, do not in any case install the stove within 8 inches of combustible materials around the sides or 16 inches above the top of the stove (fireplace installations require greater clearances above the stove - see below in the clearance chart). These distances may need to be increased if the materials are sensitive to heat. Note also that wall paper and other decorative materials may become detached with the effects of heat and care should be taken to ensure that they do not fall towards the stove in such an event.

When the stove is positioned near non-combustible materials, a gap of 4 inches or more is recommended for cleaning purposes and to ensure that heat circulates around the stove and out into the room.

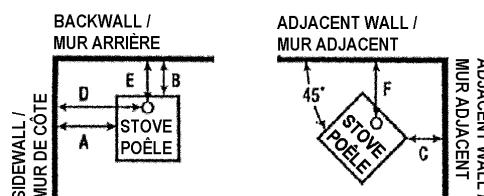

### Clearance requirements for 2B Standard without shields (Singlewall connector)

CLEARANCE REQUIREMENTS	STANDARD RESIDENTIAL INSTALLATION (SINGLEWALL CONNECTOR)	
	USA	CANADA
A. Sidewall to unit	26"	26" (660 mm)
B. Backwall to unit	16"	16" (406 mm)
C. Cornerwall to unit	16"	16" (406 mm)
D. Sidewall to connector	29"	29" (737 mm)
E. Backwall to connector	18"	18" (457 mm)
F. Cornerwall to connector	19"	19" (483 mm)
G. Unit to ceiling	-	-
H. Floor to ceiling	-	-

### Clearance requirements for 2B Standard with Convection shields (Singlewall connector)

CLEARANCE REQUIREMENTS	STANDARD RESIDENTIAL INSTALLATION (SINGLEWALL CONNECTOR)	
	USA	CANADA
A. Sidewall to unit	26"	26" (660 mm)
B. Backwall to unit	16"	16" (406 mm)
C. Cornerwall to unit	16"	16" (406 mm)
D. Sidewall to connector	26"	26" (660 mm)
E. Backwall to connector	23"	23" (583 mm)
F. Cornerwall to connector	19"	19" (483 mm)
G. Unit to ceiling	-	-
H. Floor to ceiling	-	-

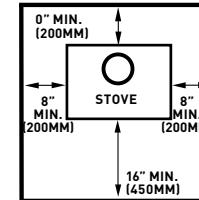

#### MINIMUM CLEARANCES TO COMBUSTIBLES: DEGAGEMENTS MINIMAUX AUX MATERIAUX COMBUSTIBLES:

### Clearance requirements for 2B Standard with & without shields (Doublewall connector)

CLEARANCE REQUIREMENTS	STANDARD RESIDENTIAL INSTALLATION (DOUBLEWALL CONNECTOR)	
	USA	CANADA
A. Sidewall to unit	20"	20" (508 mm)
B. Backwall to unit	12"	12" (305 mm)
C. Cornerwall to unit	16"	16" (406 mm)
D. Sidewall to connector	26"	26" (660 mm)
E. Backwall to connector	14"	14" (356 mm)
F. Cornerwall to connector	19"	19" (483 mm)
G. Unit to ceiling	-	-
H. Floor to ceiling	-	-

### FLOOR PROTECTION REQUIREMENTS

FLOOR PROTECTOR MUST BE NON-COMBUSTIBLE MATERIAL. IT MUST EXTEND BENEATH HEATER, AND TO THE FRONT / SIDES / REAR AS INDICATED

Floor protection requirements	Non-combustible materials beneath stove	
	USA	Canada
A. Extending distance, back	-	200 mm
B. Extending distance, right side	6"	200 mm
C. Extending distance, left side	6"	200 mm
D. Extending distance, front	16"	450 mm

In the US, floor protection must be constructed of a non-combustible material and installed to extend beneath the heater and 16" to the front and 8" to the sides of the fuel loading door and ash removal openings. In Canada, floor protection must be constructed of a non-combustible material and installed to extend beneath the heater and 450 mm.(16") to any side with a door and 200 mm.(8") beyond the appliance on the other sides.

### **Distance to furniture**

The recommended minimum distance from stove to furniture is 30 inches. Note that some furniture is more easily affected by heat and may need to be moved to a greater distance. This is your responsibility.

In addition other combustible materials, away from the stove. In general, a distance of 30 inches must be maintained between the stove and moveable combustible item such as drying clothes, newspapers, firewood etc.

### **DO NOT INSTALL IN A MOBILE HOME**

#### **Note:**

#### **Acid Protection**

If acid-washing the masonry around the stove, protect the stove surface with an acid-proof cover.

#### **Fresh Air Inlet**

Unless there is deemed to be sufficient ambient leakage of air into the room via doorways, windows and the like, a dedicated fresh air inlet will be needed. This inlet should have 2 square inches (1250 square mm) of free air space. This is particularly important where the room is well sealed, or where an extractor hood or ventilation system disturbs the natural air pressure. Such an inlet should not be on a wall that is usually subject to negative pressure from normal wind pattern. Avoid placing the inlet directly across the room from the stove, thus causing a cold air draft.

## **2.0 Operation**

### **2.1 Before you start firing**

**For use with solid wood fuel only. Do not overfire, if heater or chimney connector glows you are overfiring. Inspect and clean chimney frequently. Under certain conditions of use creosote buildup may occur rapidly. Because of risk of smoke and flame spillage, operate only with door fully closed.**

#### **CAUTION:**

**Hot while in operation. Keep children, clothing and furniture away. Contact may cause skin burns.**

**DO NOT USE CHEMICALS OR FLUIDS TO START THE FIRE**

**DO NOT BURN GARBAGE OR FLAMMABLE FLUIDS**

**DO NOT USE A GRATE, ANDIRONS, OR OTHER WAYS OF ELEVATING THE FIRE - BUILD FIRE DIRECTLY ON HEARTH.**

**DO NOT USE GASOLINE, GASOLINE-TYPE LANTERN FUEL, KEROSENE, CHARCOAL LIGHTER OR FLUID OR SIMILAR LIQUIDS TO START OR FRESHEN UP A FIRE IN THIS HEATER. KEEP ALL SUCH LIQUIDS AWAY FROM THE HEATER WHILE IT IS IN USE**

#### **Choosing your fuel**

All types of natural wood can be burned on your stove, but they must be well-seasoned and dry. Once the wood is cut to length, it should be split down middle - to suit the dimensions given below - to allow moisture to evaporate. Cut the wood to a length of max 12 inches (30 cm) and approx. 3 to 3.5 inches (7-8 cm) in section. If you can weigh your wood, aim for around 2 lbs. For correct combustion and heat output, wood fuel should contain no more than 20% moisture; this can easily be checked by using the Morsø Moisture Meter (part # 62929900).

To naturally season wood fuel, stack and store it under cover in an airy location where fresh air can move through each piece. Some soft woods may take as little as one good summer to season whereas harder woods such as oak, maple, and elm may require seasoning up to 18 months. Avoid overly dry wood that is gray in color as under certain conditions it can cause performance problems, such as back-puffing and sluggishness. Well seasoned wood will be light to hold and will show signs of cracking from the center-out in the ends. If your wood spits or sizzles when burnt, and your stove's door glass persistently mists up, your wood is not properly seasoned. Never use drift wood (from the sea), whose salt content may cause corrosion, nor construction wood that may have been impregnated with chemicals.

#### **To optimize efficiency:**

**Burning wet wood has a negative impact on efficiency**

**CAUTION Do not place fuel within the installation clearances for the stove or within the space required for loading fuel and ash removal.**

#### **Starting the First Fire**

The initial fire should be small, so that the stove paint can cure and the main plates of the stove can settle into position. Some fumes will be given off by the paint. Ventilate the room during this phase.

The setting of the air control, lighting techniques and loading intervals will depend on chimney draft, the fuel used, the heat required and so on. Some basic techniques are outlined below.

## In principle

Your stove is fitted with Primary and Secondary air inlets.

Primary Air is controlled using the spinner on the door. Open the spinner will allow a supply of preheated air to enter the firebox via the 'airwash' system situated inside the stove and above the glass.

The secondary air is injected into the flue gases above the fire resulting in a cleaner, more efficient combustion process. The supply of secondary air is fixed open and is not adjustable.

For extra safety, your stove has been fitted with a removable handle on the frontdoor.

## 2.2 Lighting and loading intervals

When first lighting the stove, a large volume of air is needed. When the stove is cold, you should leave the door open an inch or two for the first few minutes and open the primary air supply completely. While the door is open, do not leave the stove unattended.

To form a reasonable bed of ash on the floor of the stove, you should use 2-4 pounds of dry kindling at the initial lighting. If possible, maintain a 1-1.5 inch (2-3 cm) layer of ash on the floor of the combustion chamber for added insulation.

1. We recommend using the "top-down" method to light your wood-burning stove. It is the most environmentally-friendly method of lighting. Use two firelighters and approx. 2-4 lbs of dry kindling sticks to quickly create a glowing layer of wood. Place the firelighters directly under the top layer of kindling sticks. This minimizes soot formation on the glass. Soot formation on the glass is often caused by too vigorous burning in contact with cold surfaces. If you avoid the formation of soot when lighting the fire and build up a layer of hot embers, you will have minimal soot formation when getting the fire burning again later.

2. The air supply must be fully open.

3. Light the fire.

4. After lighting, partially close the door, leaving it open an inch or two to allow in plenty of combustion air.

4. When the chimney is warm after about 5-10 minutes, the frontdoor should be closed. A suitable layer of ember will be formed after about 15-20 minutes.

5. When ready to reload, use a poker to spread the ember across the firebox floor, bringing plenty towards the front of the stove.

6. Refuelling of your stove should be done while there are still glowing embers in the bed. Spread the embers across the bottom, but concentrated mostly towards the front of the stove. We recommend using fuel load with a weight of 4 lbs (2 pieces) and up to 7 lbs (5 pieces).

**Always keep the fuel load beneath the lowest secondary air nozzles. The space in front of and above the lowest air nozzles is reserved for volatile gas combustion only.**

When refuelling your stove, it is recommended that you open the stove door gently for the first 1-2", then wait for a few seconds for the pressure in the flue to equalise; you are now safe to proceed and open it all the way. By using this technique smoke spillage can be eliminated particularly in poor chimney draft conditions. The stove door should not be opened when the stove is being fired vigorously.

7. Close the frontdoor. Leave the primary air supply fully open. The new fuel will ignite in a minute or two

8. After a few minutes, adjust the primary air supply to suit your heating requirements.

9. For refueling, add a layer of wood while there are still plenty of live embers. Repeat steps 5-8.

**This wood heater has a manufacturer-set minimum low burn rate that must not be altered. It is against federal regulations to alter this setting or otherwise operate this wood heater in a manner inconsistent with operating instructions in this manual.**

**Warning: Fireplace stoves must never be left unattended with the door open. If the door is left partly open, gas and flame may be drawn out of the fireplace stove opening, creating risks from both fire and smoke. We recommend that you fit a smoke detector in the room where the stove is installed.**

**DO NOT OVERFIRE THIS HEATER. Overfiring may cause a house fire, or can result in permanent damage to the stove. If any part of the stove glows, you are overfiring.**

The maximum recommended weight of wood fuel per load is 3.5 kg/7 lbs (approx 5 split logs).

Under normal firing, the average flue temperature in the stove pipe, measured 20 cm above the stove, is approx. 300° C (550°F). The maximum flue temperature in the stove pipe must not exceed 450° C (750°F). If the flue temperature exceeds 450°C (750°F), it is considered as over firing and may cause premature wear and tear of the stove.

To help gauge the correct running temperature of your stove, we recommend you use the Morsø Flue Gas Thermometer (part No. 62901200). The Flue Gas Thermometer magnetically attaches onto the stove pipe approx 20 cm (8") above the stove's top plate and measures the surface temperature of the stove pipe. Please see your authorized Morsø Dealer for availability.

#### Draft conditions

If smoke or fumes come out of your stove when lighting up and reloading, or if the fire simply will not respond, a poor draft is almost certainly to blame. (In a very few cases, there may be insufficient fresh air getting into the room - see installation advice above). Take advice from your stove supplier on how best to upgrade your flue system to improve draft.

#### Rules of woodburning

If you want less heat, put fewer logs on the stove and reduce the amount of air. It is still important to maintain a good layer of embers.

Less heat - less wood - less air

Greater heat - more wood - more air

Soot deposits will settle on the glass if the stove is run too slowly or if your wood is not well seasoned.

#### Carbon monoxide detectors

It is required in some jurisdictions to install smoke and carbon monoxide detectors where heaters are installed. Install at least one smoke detector on each floor of your home to ensure your safety. It should be located away from the wood appliance and close to the sleeping areas. Locating a smoke detector too close to a wood appliance can cause the smoke detector alarm to sound if a puff of smoke is emitted while the wood appliance door is open during reloading. Follow the smoke detector manufacturers placement, installation, and maintenance instructions

## 3.0 Maintenance

When performing maintenance on your stove, always protect yourself, using safety goggles and gloves

### 3.1 Exterior Maintenance

The stove surface is painted with heat-resistant Senotherm paint. It is best kept clean by vacuuming with a soft brush attachment or by wiping with a lint-free cloth.

Over a period of time, the painted surface may become slightly grey. A can of Morsø touch-up spray paint should be available from your stove supplier. This can be applied - in accordance with the instructions - in just a few minutes. When first firing after touching up, the stove will give off a slight smell as the paint cures. Make sure to ventilate the room well during this phase.

### 3.2 Internal maintenance

#### Glass

If the stove is generally run at the correct temperatures, there should be little or no dirt on the glass. If dirt does settle during lighting, most will burn off as temperatures increase. For heavier deposits that will not burn off, use Morsø glass cleaner, applied when the glass is cold, in accordance with the instructions. Never use abrasive cleaners on the glass surface.

#### Reasons for dirty glass

- Fuel too wet
- Logs too large or not split
- Combustion temperatures too low

**Do not clean the glass while hot  
Replace broken glass immediately.**

**Do not operate your stove if the glass in the door is damaged.**

If you need to replace the glass, it should be replaced with the high temperature ceramic glass supplied by Morsø, contact your Morsø dealer.

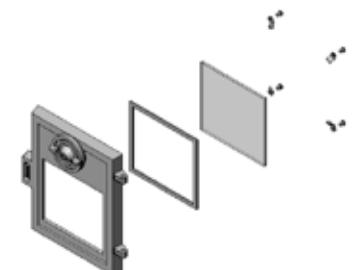

#### Installing the glass

Never install the glass when the stove is in function.

#### Ceramic glass replacement

Ceramic glass cannot be recycled because it has a higher melting point than ordinary glass. If ceramic glass is mixed with ordinary glass, the raw material is spoiled, and the reclaiming process may be halted. Take care that the ovenproof glass does not end up among ordinary recycled waste. That will be a great benefit to the environment.

Note: Should be handed in to a recycling station as ceramic glass.

1. Lift the door off the hinges and place it face down on a sheet of cardboard or other non-abrasive fabric.
2. Unscrew the 4 bolts that secure the glass. (In the event that a bolt sheers off when being unscrewed, remove the remaining body of the bolt by drilling down its centre with 1/8 inch high speed steel drill bit. Smaller drill bits may be successful, but do not use a larger bit. Make sure the bit stays away from the edges of the bolt - this may damage the thread in the cast iron).
3. Remove the old ceramic gaskets and clean up the surface underneath with wire wool or emery paper to remove loose particles.
4. Place the new gasket material in position around the perimeter of the window area, making sure to pinch them to the length in such a way that they make a continuous seal. Leave no gaps.
5. Place the new glass in position on the strips and screw home the fresh bolts and fitting by hand.
6. Finally, give each of the bolts an extra half turn or so. The glass should hold tight enough by that cleaning will not dislodge it. Do not over-tighten the bolts as this may put excessive pressure on the glass, resulting in cracking - important!

**To reduce the risk of breaking the glass, avoid striking the glass or slamming the door.**

#### **Internal service parts**

The flame-path equipment - consisting of the ashpan, grate, firebricks, Cast iron fire plates, glass, baffle and flue collar - are subject to the extremes of heat produced by the fire. From time to time, one or other of these parts may need replacing as a matter of routine maintenance.

#### **Stone replacement**

When replacing the stones, unscrew at the rear of the stove the heat reflector, which is mounted with 4 screws. This provides access to the 2 bolts that hold the smoke baffle in place. Remove these bolts so that the smoke baffle inside the stove can be raised. Raise the smoke baffle so that the old stones can be removed from the stove and the new ones can be installed. The side stones are placed in the grooves in the vermiculite bottom plate. Once the stones have been properly put into place, lower the smoke baffle down onto the stones and re-bolt it securely to the cast rear of the stove. Finally, reinstall the rear heat reflector with its 4 screws.

**NOTE: The flame-path equipment, the ceramic rope and the paint finish are not covered by guarantee.**

All of these service parts can be bought from your Morsø dealer, and we recommend that damaged parts are replaced as soon as possible to avoid collateral damage. Should the baffle be distorted by an overfire, the stove will still function, although its efficiency may be compromised. Replace it as soon as possible.

#### **Reasons for fast internal wear and tear**

- Persistent heavy firing
- Soot and ashes left to accumulate

#### **Gasket**

The gasket around the perimeter of the door may harden over a period of time. It should be replaced if it becomes difficult to close the doors or if air starts to leak in around the perimeter of the doors, causing the fire to become a little less controllable. A Morsø rope gasket kit is available from your stove supplier.

#### **3.3 Cleaning the Stove and the Flue**

Check for soot above the baffle plate and around the flue outlet every month or so to start with. If the stove suddenly becomes sluggish, check for a soot fall around the flue collar or in the flue/chimney.

**The chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire.**

Clean the flue/chimney - all the way from the stove to the flue terminal point above the house. A good routine is to clean the flue after each heating season in any case, and inspect prior to the season to ensure that bird's nests or other blockages have not occurred during the off season.

#### **Ash disposal**

Empty the ashpan on a daily basis or as needed. Ash allowed to build up towards the underside of the grate will trap heat and could cause premature failure of the grate.

#### **Empty the ashpan according to this procedure:**

Open the front door, and use a shovel.

Dispose the ash in a metal container with a tight fitting lid. The closed container of ashes should be placed on a noncombustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have thoroughly cooled.

#### **Caution:**

**Never empty a stove in operation.**

**Never use your household or shop vacuum cleaner to remove ash from the stove; always remove and dispose of the ash properly.**

#### **Creosote - formation and need for removal**

When wood is burned slowly, it produces tar and other organic vapors, which combine with expelled moisture to form creosote. The creosote vapors condense in the relatively cool chimney flue of a slow-burning fire. As a result, creosote residue accumulates on the flue lining. When ignited this creosote makes an extremely hot fire. When burning wood, the chimney and chimney connector should be inspected at least once every two months during the heating season to determine if a creosote buildup has occurred. If creosote has accumulated, it should be removed to reduce the risk of a chimney fire.

### **Chimney sweeping**

Inspect the system regularly during the heating season as part of a regular maintenance schedule. To inspect the chimney, let the stove cool completely. Then, using a mirror, sight up through the flue collar into the chimney flue. If you cannot inspect the flue system in this fashion, the stove must be disconnected to provide better viewing access.

Clean the chimney using a brush the same size and shape as the flue liner. Run the brush up and down the liner, causing any deposits to fall to the bottom of the chimney where they can be removed through the clean-out door.

Clean the chimney connector disconnecting the sections, taking them outside, and removing any deposits with a stiff wire brush. Reinstall the connector sections after cleaning, being sure to secure the joints between individual sections with sheet metal screws.

If you cannot inspect or clean the chimney yourself, contact your local Morsø Dealer or a professional chimney sweep.

### **If you do experience a chimney fire, act promptly and:**

1. Close the air control.
2. Get everyone out of the house.
3. Call the Fire Department.

### **Annual maintenance**

Before the heating season, perform a thorough cleaning, inspection and repair:

Thoroughly clean the chimney and chimney connector.

Inspect the chimney for damage and deterioration. Replace weak sections of prefabricated chimney. Have a mason make repairs to a masonry chimney.

Inspect the chimney connector and replace any damaged sections.

Check gasketing for wear or compression, and replace if necessary.

Check the glass for cracking; replace if needed.

Check door and handle for tightness. Adjust if needed.

### **ALWAYS USE ORIGINAL MORSØ SPAREPARTS**

## **3.4 Leaving the stove for extended periods**

Important:

If the stove is to be left unused for any period of time, clean it out thoroughly and leave the air control slightly open to allow airflow. Make sure that the flue does not allow rainwater to come anywhere near the stove; install a chimney cap, but do not block off the flue completely.

These measures should ensure there is a slight movement of air through the stove, and that the body of the stove remains dry, right into the corners.

Any ash left within an unfired stove can attract moisture like blotting paper. If moisture is allowed to settle within the stove, rust will form. Rust expands as it takes a grip. This can lead to undue pressure on the stove joints, and this in turn may result in damage to the stove.

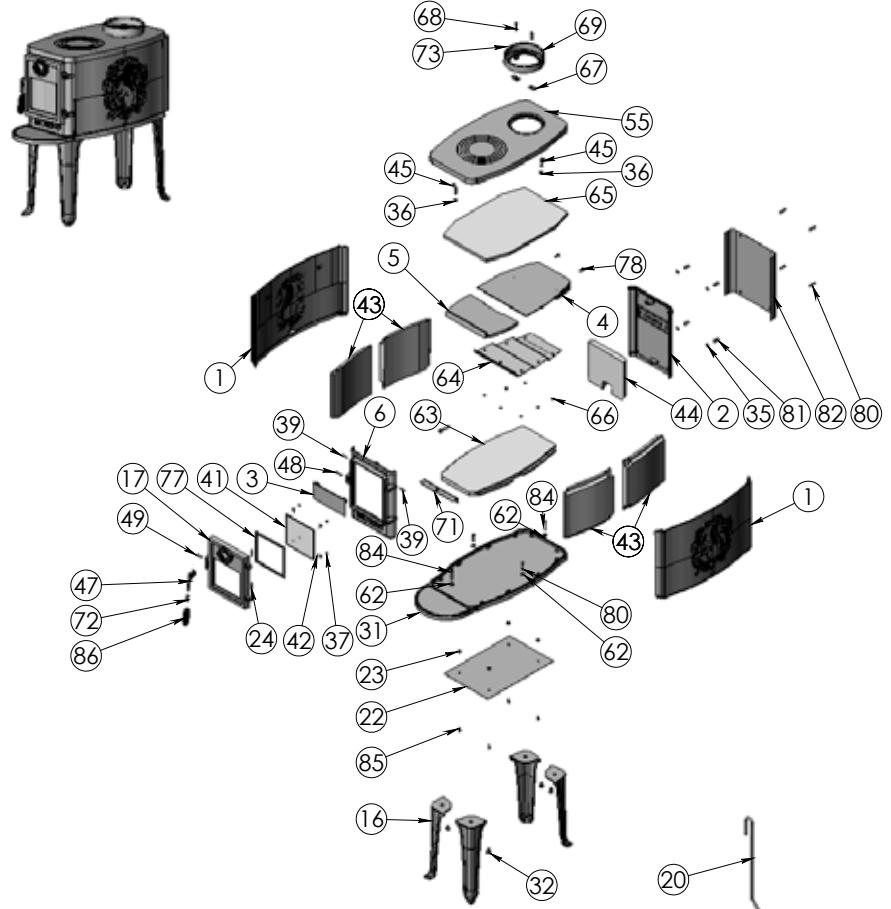

**NOTE: It is best to thoroughly clean the stove after the heating season has concluded. Adding a dessicant, such as kitter litter, into the ash pan helps absorb moisture during the summer months. Be sure to remove this prior to the heating season.**

### **Thank you for buying a morsø stove.**

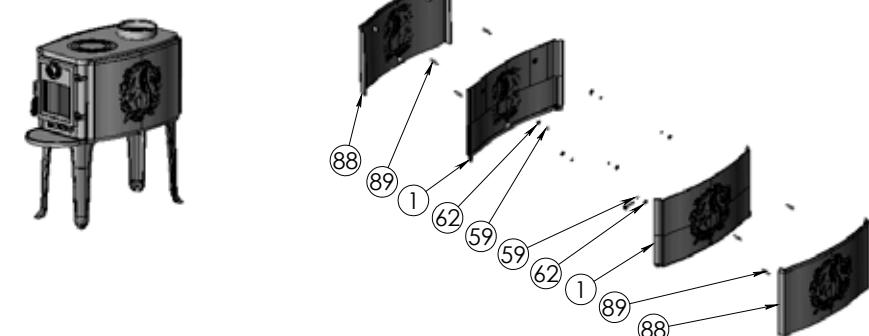

We hope you have many years of carefree warmth in its company. Some initial experimentation with loading and running techniques will decide your normal routine. If you have any problems after this short learning phase, please refer to your stove dealer. Should they be unable to help for any reason, please contact us in writing at the address on the front of this publication.

## **3.5 Parts diagram for model Morsø 2B Standard**

### **2B Standard Radiant**

### **2B Standard Convection**

### 3.6 Parts list for model Morsø 2B Standard

<b>Pos. No.</b>	<b>Parts</b>	<b>2B Standard without shields</b>	<b>2B Standard with convection shields</b>

## Guarantee Product Registration

### MORSØ 10 YEAR GUARANTEE CERTIFICATE

Behind every Morsø stove is more than 160 years of dedicated stove design and manufacturing experience. Quality control has always been at the heart of the production process and detailed measures have been put into place at all key stages of the build. Accordingly, provided that the stove has been supplied by an authorised Morsø dealer, Morsø will offer a 10-Year Manufacturers Guarantee against manufacturing defect to any of the main exterior body parts of its stoves.

Read more about "Morsø 10 years guarantee/product registration card" and  
**REGISTER** your new Morsø stove online:  
<http://international.morsoe.com/warranty-registration>

# **IMPORTANT!**

## **How to heat safely for the environment and yourself!**

- Use only dry wood**

Use only dry (max. 20% moisture content) and untreated wood. The fuel must be split and 8 - 12 cm thick.

- Light**

Light with dry kindling (use 1 - 2 kg). Leave the door ajar and stay close to the stove during the lighting phase.

- Good layer of embers**

Be certain to have a good layer of embers before refilling. The wood should light within 2 minutes. If the logs do not ignite it may, in an extreme case, cause the flue gases to ignite which may pose a risk to material damage or personal injury.

- Refuelling**

When refuelling use 2 - 3 pieces of wood  
- no more than 2 - 2.5 kg.

- Ensure adequate air**

I.e. clear and yellow flames.

- Never burn overnight**

# Manuel d'installation et d'utilisation **Morsø 2B Standard**

Pour utilisation en Amérique du Nord

Enregistrez ces instructions

**Félicitations pour l'acquisition de votre  
nouveau poêle Morsø !**

**Morsø, le plus important fournisseur sur le marché danois, fabrique des poêles-cheminées de haute qualité depuis 1853. En suivant les présentes instructions, nous sommes persuadés que votre nouveau poêle vous apportera plaisir et satisfaction durant de nombreuses années.**

**Sommaire**

	<b>Installation de votre poêle Morsø</b>	<b>Page no.</b>
1.0	1.1 Déballage du poêle 1.2 Vérifier les pièces mobiles dans le poêle 1.3 Le système de cheminée/conduit 1.4 Connexion du conduit 1.5 Connexion à une cheminée déjà en place 1.6 Positionnement du poêle	5 5 7 8 8 10
2.0	<b>Fonctionnement</b>	<b>13</b>
	2.1 Avant d'allumer le feu 2.2 Allumage et intervalles d'alimentation	13 14
3.0	<b>Entretien</b>	<b>17</b>
	3.1 Entretien extérieur 3.2 Entretien intérieur 3.3 Nettoyage du poêle et du conduit 3.4 Périodes prolongées de non-utilisation du poêle 3.5 Schéma des pièces détachées 3.6 Liste des pièces détachées	17 17 19 20 21 22

Avant d'installer et d'utiliser votre nouvel appareil de chauffage, veuillez lire ce manuel en entier. Une mauvaise installation de cet appareil de chauffage peut entraîner un incendie.

Suivez les instructions d'installation pour limiter ce risque d'incendie. Le non-respect des instructions peut entraîner des dommages matériels, corporels ou même mortels.

Contactez l'administration locale de construction concernant les restrictions et équipements d'inspection dans votre région.

Conservez ces instructions

**Accessoires en option**

Une gamme étendue d'accessoires (tels que gants de manipulation, ustensiles de cheminée, nettoyant pour vitre et peinture résistant à la chaleur) est disponible pour une utilisation adaptée à votre poêle Morsø. Ils facilitent l'entretien et l'utilisation de chaque jour. Contactez votre revendeur Morsø pour plus d'informations.

Le 2B Standard 2020 de Morsø ont fait l'objet de tests auprès des services de contrôle OMNI-Test Laboratories, Inc. Les standards du test sont UL-1482-2011 (R2015) pour les États Unis et ULC-S627-00 pour le Canada.

**Le poêle est répertorié uniquement pour brûler du bois. Ne brûler aucun autre combustible.**

U.S. ENVIRONMENTAL PROTECTION AGENCY. Certifié conforme aux normes d'émission de particules 2020 en utilisant du bois de corde.

L'émission moyenne de particules selon la méthode d'essai ASTM E3053-17 sur le bois de corde est de 0,55 g / h

Sous conditions spécifiques de test, on a pu constater que le rendement calorifique varie entre 6,959 et 25,299 Btu/hr  
Un essai effectué conformément à la norme CSA B415.1 a montré que ce poêle avait un rendement moyen de chauffage supérieur à 80,2 %.

Ce poêle doit être revisé et reparé périodiquement pour une utilisation correcte.  
Il est contre la loi fédérale d'utiliser ce poêle contredit les instructions de ce manuel.

We suggest that our woodburning hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Woodburning Specialists or who are certified in Canada by Wood Energy Technical Training (WETT).

**La fonte**

La fonte n'est pas un matériau inerte. Raison pour laquelle il n'y a pas deux poêles identiques. Ceci en raison des marges de tolérance de la fonte et de la fabrication artisanale des poêles. De fines irrégularités sont normales sur la surface de la fonte.

## 1.0 Installation de votre poêle Morsø

L'installation des poêles à bois doit être sûre et légale.

Si votre poêle Morsø n'est pas installé correctement, un incendie peut en résulter. Afin de réduire ce risque, suivez attentivement les instructions d'installation. Contactez l'administration locale de construction concernant les restrictions et l'inspection de l'installation dans votre région.

### Avant de commencer l'installation de votre poêle, assurez-vous que :

- Le poêle et le raccord de cheminée sont placés suffisamment loin des matériaux de combustion afin de remplir toutes les conditions d'espacement.
- La protection du sol est adéquate et correctement effectuée conformément aux conditions.

Contactez l'administration locale de construction pour toutes les approbations nécessaires.

La plaque d'informations située à l'arrière du poêle fournit les informations nécessaires concernant les données de test de sécurité, le nom du laboratoire de test agréé et les conditions d'installations.

Les conditions d'installation diffèrent selon les districts et l'administration locale de construction a le pouvoir d'autorisation définitive pour approuver votre installation. Discutez de l'installation avec eux avant de commencer. Pour plus d'informations, contactez votre vendeur.

Ne connectez aucun conduit ou système de distribution d'air.

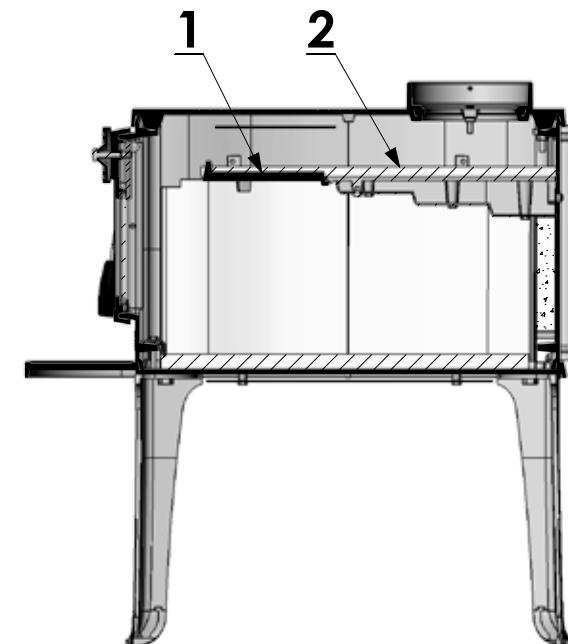

**Important : Si vous ne suivez pas attentivement les instructions d'installation, il peut en résulter des situations dangereuses comme des incendies de cheminée ou de maison. Suivez attentivement les instructions et ne vous en écartez pas car cela peut entraîner des dégâts corporels ou matériels.**

### 1.1 Déballage du poêle

2B Standard : après le déballage, dévissez la chambre de combustion de la palette avant de la poser tranquillement sur le côté. Pour éviter tout dommage du poêle et du sol, vous pouvez utiliser l'emballage en carton comme protection. Déballez les pieds fournis avec le poêle et vissez-les sur le socle en fonte à l'aide des boulons joints - Ne pas utiliser les boulons qui servent à fixer la chambre de combustion à la palette en bois.

### 1.2 Vérifier les pièces mobiles dans le poêle

Après le déballage, vérifiez que les briques réfractaires sont fermement en place et n'ont pas bougé pendant le transport. Vérifiez également que le contrôle d'air fonctionne librement. Avant le premier allumage, assurez-vous que le déflecteur (1) et l'isolation (2) au-dessus du déflecteur sont placés correctement, selon les illustrations ci-dessous.

### Pose du déflecteur vertical

Faites passer le déflecteur vertical par la porte, comme indiqué ci-dessous (illustrations 1 et 2). Placez le déflecteur dans la position correcte (illustrations 3 et 4). Placez l'isolation sur le déflecteur.

### Accessoires standard

Le gant Morsø et le joint étanche de raccord de tuyau céramique sont des accessoires standard et se trouvent habituellement dans le cendrier ou le foyer.

### 1.3 Le système de cheminée/conduit

Remarque : le système de conduit doit être sécurisé de façon indépendante et ne doit pas reposer sur le poêle.

**Le poêle ne doit pas être raccordé à un conduit de cheminée servant à un autre appareil. (Plusieurs tuyaux peuvent parcourir une seule souche de cheminée ; utilisez un seul tuyau par appareil).**

**Utilisez une cheminée maçonnée de type résidentiel ou une cheminée d'usine de type HT répertoriée.**

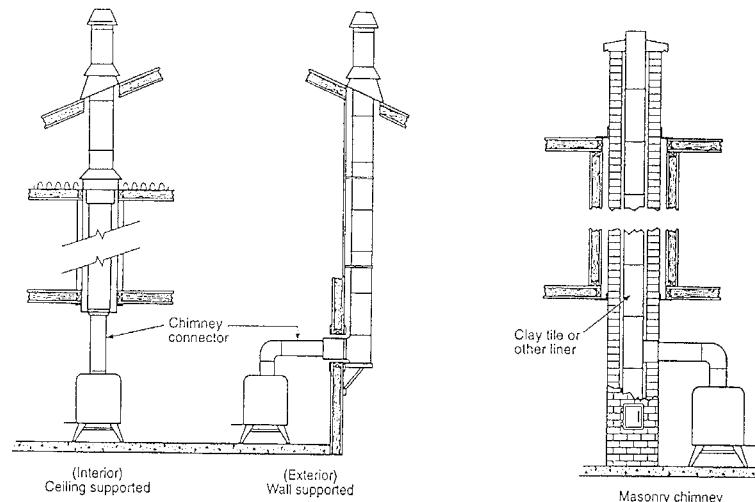

**Cheminée Haute Température (H.T.) Standard UL-103-1985 (2100° F) pour les États-Unis et Standard Haute Température (650° C) ULC S-629 pour le Canada.**

Les dimensions internes du raccord de cheminée et de la cheminée ne doivent pas être inférieures à 6 pouces (150 mm) de diamètre (ou coupe transversale équivalente) et ne doivent être beaucoup plus grandes. Une coupe trop grande a tendance à laisser les gaz du conduit refroidir excessivement, causant ainsi lenteur ou imprévisibilité de fonctionnement du poêle.

Nous conseillons que la longueur de la cheminée est au moins de 16 pieds (4,90 m) (pas indispensable) au-dessus du poêle dans des situations ménagères normales, mesurée du collier de serrage du tuyau à l'extrémité supérieure de la cheminée.

Les conditions locales comme, par exemple, la construction du toit, de gros arbres à proximité et une altitude élevée, peuvent avoir une influence sur le tirage et la hauteur de la cheminée. Veuillez donc contacter les ramoneurs professionnels locaux ou votre concessionnaire Morsø.

### Installations typiques de cheminée usine ou maçonnée

## 1.4 Connexion du conduit

Un collier de serrage de tuyau est placé dans la zone du foyer.

Utilisez un raccord de cheminée bleu ou noir de 24 MSG ou un raccord de cheminée à double paroi répertorié. Reportez-vous aux règlements locaux et aux instructions du fabricant de la cheminée concernant les précautions à respecter pour faire passer une cheminée à travers un mur ou un plafond combustible. Pensez à sécuriser le raccord de cheminée avec au moins trois vis au produit et à chaque section contiguë.

Positionnez le poêle et connectez le système de conduit.

**Portez des gants et des lunettes de protection lors du perçage, coupeage ou assemblage des sections du raccord de cheminée.**

## 1.5 Connexion à une cheminée déjà en place

Un raccord de cheminée est le tuyau à double ou simple paroi qui relie le poêle à la cheminée. La cheminée elle-même est la structure maçonnerie ou préfabriquée qui contient le tuyau. Les raccords de cheminée permettent de relier le poêle à la cheminée.

Les raccords à double paroi doivent être testés et répertoriés pour une utilisation avec des appareils à combustibles solides. Les raccords à paroi simple doivent être faits en acier de calibre 24 ou plus. N'utilisez pas de raccords galvanisés : ils ne résistent pas aux hautes températures atteintes par la fumée et les gaz d'échappement et qui peuvent dégager des vapeurs toxiques sous grande chaleur. Le raccord doit avoir un diamètre de 6 pouces (150 mm).

**Si possible, évitez de faire passer le raccord de cheminée à travers un mur ou un plafond combustible. Si cela est inévitable, référez-vous aux sections sur Traverser les murs. Ne faites pas passer le raccord à travers un grenier, un placard ou tout espace confiné semblable lors de l'installation des raccords de cheminée.**

Il est primordial de garder les gaz du tuyau en déplacement doux dans la bonne direction. Ne déviez pas dans un grand vide à cet endroit ; formez plutôt une section continue jusqu'en haut. Utilisez des courbures moyennes (par ex. 45° au lieu de 90°) plutôt que des angles aigus lorsqu'un changement de direction est nécessaire. Toutes les parties du conduit doivent être accessibles pour des raisons de nettoyage.

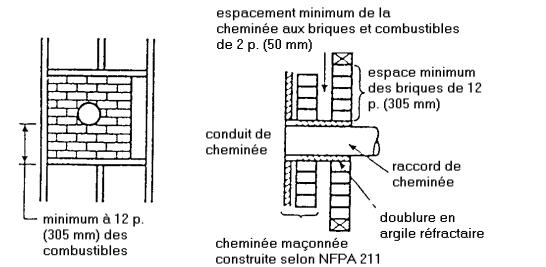

Dans les tronçons de cheminée horizontaux, maintenez un espacement de 18 pouces (455 mm) du plafond. Gardez-les aussi courts et directs que possible avec des coude n'excédant pas 90 degrés. Inclinez les tronçons horizontaux de raccords de  $\frac{1}{4}$  par pied (20mm par mètre) en partant du poêle vers la cheminée. La longueur maximum recommandée d'un tronçon horizontal est de 3 pieds (1 mètre) et la longueur totale ne doit pas dépasser 8 pieds (2,5 mètres).

Les informations sur l'assemblage et l'installation des raccords sont fournies par les instructions du fabricant, comme vous assemblez et fixez le raccord au poêle et à la cheminée.

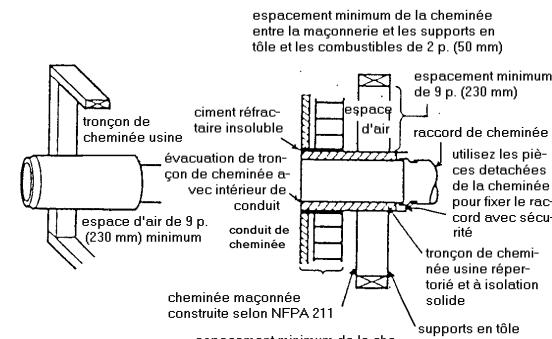

**Assurez-vous que le poêle et le raccord de cheminée installés se trouvent à une distance correcte des matériaux de combustion proches. Voir le paragraphe sur les espacements page 8.**

Si le conduit passe par une paroi ou une cloison de construction inflammable, l'installation doit être conforme à la norme CAN/CSA-B365.

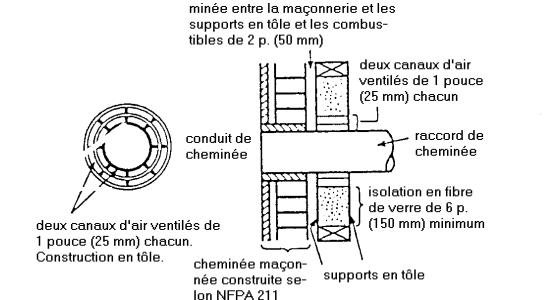

## Systèmes de raccord de cheminée et autorisations des appareil de chauffage ménagers à travers les murs inflammables

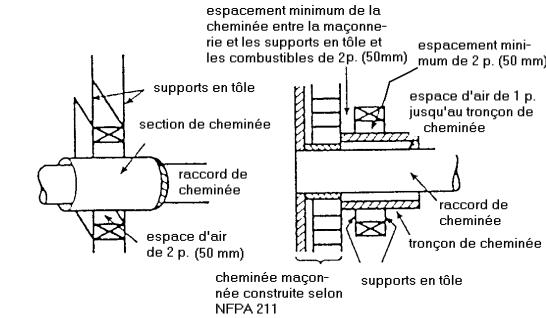

A. Maçonnerie en briques charpentée d'au moins 3,5 pouces (90 mm) d'épaisseur dans un mur inflammable avec une séparation en brique de 12 pouces (305 mm) minimum de la doublure en argile aux combustibles. La doublure en argile réfractaire doit aller de la surface de la sortie du mur en brique jusqu'à la surface interne de la doublure du tuyau de cheminée mais pas au delà et doit être solidement cimentée en place.

B. Tronçon de cheminée usine répertoriée, à isolation solide, de même diamètre intérieur que le raccord de cheminée et ayant une isolation de 1 pouce (25 mm) ou plus avec un espace d'air minimum de 9 pouces (230 mm) entre le mur extérieur de la longueur de la cheminée et les combustibles.

C. Raccord de cheminée en tôle, minimum calibre 24 en épaisseur, avec un cylindre ventilé minimum calibre 24 en épaisseur ayant deux canaux d'air de 1 pouce (25 mm), séparés des combustibles par au moins 6 pouces (150 mm) d'isolation de fibre de verre. L'ouverture doit être couverte et le cylindre soutenu par un support en tôle, minimum calibre 24 en épaisseur.

D. Tronçon de cheminée usine répertoriée, à isolation solide d'un diamètre intérieur plus grand de 2 pouces (50 mm) que le raccord et ayant une isolation de 1 pouce (25 mm) ou plus, servant de traverse pour un raccord de cheminée à simple paroi en tôle d'épaisseur minimum de calibre 24, avec un espace d'air d'au moins 2 pouces (50 mm) entre le mur extérieur de la section de cheminée et les combustibles. La longueur minimum de la section de cheminée doit être de 12 pouces (305 mm) et espacée d'au moins 1 pouce (25 mm) du raccord utilisant des plaques de soutien en tôle à chaque extrémité de la section de cheminée. L'ouverture doit être couverte et la section de cheminée soutenue des deux côtés avec des supports en tôle fixés à des murs de calibre 24 épaisseur minimum. Les fixations utilisées pour sécuriser la section de cheminée ne doivent pas pénétrer la doublure du conduit de cheminée.

## 1.6 Positionnement du poêle

### Distance avec murs et linteaux

Si le poêle se trouve à proximité de matériaux combustibles, consultez tous les règlements de constructions locaux et nationaux en vigueur en ce qui concerne les espacements. Quels que soient les règlements qui s'appliquent à votre région, n'installez en aucun cas le poêle à moins de 8 pouces (205 mm) des matériaux combustibles sur les côtés et à moins de 16 pouces (405 mm) au-dessus du poêle (des installations des poêles demandent plus d'espacement au-dessus du poêle - voir le graphique des distances en dessous). Il peut s'avérer nécessaire d'augmenter ces distances si les matériaux sont sensibles à la chaleur. Notez également que les papiers peints et autres matériaux de décoration peuvent se détacher sous l'effet de la chaleur. Prenez garde à ce qu'ils ne tombent pas sur le poêle, le cas échéant.

Si le poêle se trouve à proximité de matériaux non combustibles, un espace de 4 pouces (100 mm) ou plus est recommandé pour des raisons de nettoyage et afin d'assurer la circulation de la chaleur autour du poêle et dans toute la pièce.

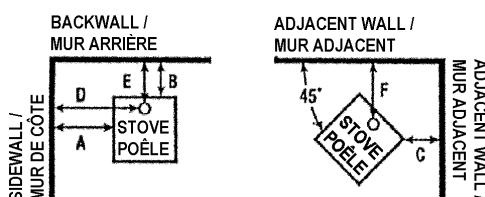

### Conditions d'espacement pour 2B Standard sans protecteur (raccord à simple paroi)

Conditions d'espacement requises:	Installation résidentielle standard (raccord à simple paroi)	
	États-Unis	Canada
A. De la paroi latérale à l'unité	26"	26" (660 mm)
B. De la paroi arrière à l'unité	16"	16" (406 mm)
C. De la paroi d'angle à l'unité	16"	16" (406 mm)
D. De la paroi latérale au raccord	29"	29" (737 mm)
E. De la paroi arrière au raccord	18"	18" (457 mm)
F. De la paroi d'angle au raccord	19"	19" (483 mm)
G. De l'unité au plafond	-	-
H. Du sol au plafond	-	-

### Conditions d'espacement – 2B Standard avec protecteur de convection (raccord à simple paroi)

Conditions d'espacement requises:	Installation résidentielle standard (raccord à simple paroi)	
	États-Unis	Canada
A. De la paroi latérale à l'unité	26"	26" (660 mm)
B. De la paroi arrière à l'unité	16"	16" (406 mm)
C. De la paroi d'angle à l'unité	16"	16" (406 mm)
D. De la paroi latérale au raccord	26"	26" (660 mm)
E. De la paroi arrière au raccord	23"	23" (583 mm)
F. De la paroi d'angle au raccord	19"	19" (483 mm)
G. De l'unité au plafond	-	-
H. Du sol au plafond	-	-

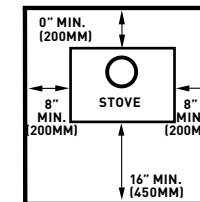

#### MINIMUM CLEARANCES TO COMBUSTIBLES: DEGAGEMENTS MINIMAUX AUX MATERIAUX COMBUSTIBLES:

### Conditions d'espacement pour 2B Standard avec et sans protecteurs (raccord à double paroi)

Conditions d'espacement requises:	Installation résidentielle standard (raccord à double paroi)	
	États-Unis	Canada
A. De la paroi latérale à l'unité	20"	20" (508 mm)
B. De la paroi arrière à l'unité	12"	12" (305 mm)
C. De la paroi d'angle à l'unité	16"	16" (406 mm)
D. De la paroi latérale au raccord	26"	26" (660 mm)
E. De la paroi arrière au raccord	14"	14" (356 mm)
F. De la paroi d'angle au raccord	19"	19" (483 mm)
G. De l'unité au plafond	-	-
H. Du sol au plafond	-	-

### EXIGENCES PROTECTION DU SOL

LE PROTECTEUR DE PLANCHER DOIT ÊTRE D'UN MATERIAU INCOMBUSTIBLE.  
IL DOIT S'ETENDRE EN DESSEUS DE L'APPAREIL ET AU DEVANT, AUX CÔTÉS ET À  
L'ARRIÈRE DE L'APPAREIL COMME INDIQUE

Exigences de protection du sol	Matériaux incombustibles sous le poêle	
	États-Unis	Canada
A. Distance de prolongement, arrière	-	200 mm
B. Distance de prolongement, côté droit	6"	200 mm
C. Distance de prolongement, côté gauche	6"	200 mm
D. Distance de prolongement, avant	16"	450 mm

### Sur le sol

Si le poêle est placé sur un sol combustible, une protection solide non combustible doit couvrir le sol sous le poêle. Cette protection doit couvrir une zone d'au moins 16 pouces (450 mm Canada) devant la porte du poêle et au moins 8 pouces (200 mm Canada) de chaque côté de l'ouverture amovible pour le mazout ou les cendres. Pour les tuyaux de cheminée horizontaux, une protection non combustible doit être placée au-dessous du tuyau, dépassant de 2 pouces de chaque côté.

Vous devez vous assurer que le sol dans cette zone peut aisément supporter le poids du poêle.

## **Distance des meubles**

La distance minimum recommandée entre le poêle et les meubles est de 30 pouces (760 mm). Veuillez noter que certains meubles sont plus facilement affectés par la chaleur et peuvent par conséquent nécessiter d'être plus éloignés. Ceci est votre responsabilité.

De plus, maintenez tout autre matériau combustible éloignés du poêle. En général, une distance de 30 pouces (760 mm) doit être conservée entre le poêle et les objets inflammables mobiles tels que chiffons, journaux, bois de chauffage, etc.

**NE PAS INSTALLER DANS UN MOBILE HOME**

### **Remarque :**

#### **Protection de l'acide**

En cas de lavage à l'acide de la maçonnerie autour du poêle, protégez la surface du poêle avec une couverture résistante à l'acide.

#### **Entrée d'air frais**

A moins que la circulation d'air dans la pièce par les portes, fenêtres et autre soit jugée suffisante, une entrée d'air frais est nécessaire. Cette entrée d'air doit avoir un espace d'air libre de 2 pouces carrés (1250 mm carrés). Ceci est particulièrement important lorsque la pièce est bien scellée ou lorsqu'une hotte aspirante ou un système de ventilation perturbe la pression naturelle de l'air. Une telle entrée d'air ne doit pas se trouver sur un mur habituellement sujet à une pression négative du déplacement habituel du vent. Evitez de placer l'entrée d'air directement à l'opposé du poêle dans la pièce créant ainsi un courant d'air froid.

## **2.0 Fonctionnement**

### **2.1 Avant d'allumer le feu**

Pour une utilisation avec des combustibles solides uniquement. Ne poussez pas trop le feu, si l'appareil ou le raccord de cheminée devient incandescent, le feu est trop fort. Inspectez et nettoyez fréquemment la cheminée. Dans certaines conditions d'utilisation, la formation de créosote peut arriver rapidement. A cause des risques de débordement de fumée et de flammes, opérez uniquement avec la porte fermée.

#### **Attention :**

Chaud pendant le fonctionnement.

Tenir les enfants, vêtements et meubles éloignés.

Risque de brûlures cutanées en cas de contact.

Ne pas utiliser de produits chimiques ni de liquides pour l'allumage.

Ne pas brûler de déchets ni de liquides inflammables.

Ne pas utiliser d'essence, de pétrole à lampe, de kérósène, d'allumeur ou de liquide à charbon de bois ou tout autre liquide pour démarrer ou relancer un feu dans ce poêle.

Tenir tous ces liquides éloignés du poêle pendant son fonctionnement.

#### **Choisir votre combustible**

Vous pouvez brûler tous les types de bois naturel dans ce poêle mais ils doivent être bien secs. Une fois coupé en longueur, couper le bois en deux – conformément aux dimensions mentionnées ci-dessous- pour permettre à l'humidité de s'évaporer.

Couper le bois à une longueur maximale de 18 pouces (45 cm) et d'un diamètre d'environ 3 à 3,5 pouces (7 à 8 cm). Si vous pouvez peser votre bois, comptez environ 1,0 kg. Pour une combustion optimale et un bon dégagement de chaleur, le bois doit pas contenir plus de 20% d'humidité; ceci peut facilement être contrôlé à l'aide de l'hygromètre Morsø (article # 62929900)

Stockez les bûches couvertes dans un endroit bien aéré, où l'air peut circuler entre les bûches. Certains bois tendres peuvent n'avoir besoin que d'un bel été pour sécher, alors que certains bois plus durs, comme p.ex. le chêne, l'érable et l'orme peuvent prendre jusqu'à 18 mois. Eviter du bois trop sec, souvent d'une couleur tirant sur le gris, car dans certaines conditions, cela peut poser des problèmes de rendement tels que lenteur et projection d'étincelles. Un bois bien sec est léger à manipuler et présente des fentes du centre vers les extrémités. Si votre bois crépite ou grésille en brûlant et que de la suie persiste à se former sur la porte vitrée du poêle, votre bois n'est pas suffisamment sec.

N'utilisez jamais de dérive (de la mer) dont le contenu salé peut entraîner de la corrosion, ni du bois de construction pouvant être imprégné de produits chimiques.

#### **Allumage**

Au début, faites un petit feu pour que la peinture s'accoutume et que les plaques principales du poêle se mettent en place. La peinture peut dégager des vapeurs. Aérez la pièce pendant cette phase. Le réglage de l'aération, les techniques d'allumage et les intervalles d'alimentation dépendent du tirage de la cheminée, du combustible utilisé, de la chaleur voulue, etc. Quelques techniques de base sont soulignées ci-dessous.

## **En principe:**

Votre poêle est équipé d'entrées d'air primaire et secondaire.

L'air primaire est contrôlé grâce au levier situé sous le rebord à cendres du poêle. Pour ouvrir l'admission d'air, déplacer le levier de contrôle vers le bas. De l'air préchauffé pénètre alors dans la chambre de combustion via le système de " nettoyage d'air " situé à l'intérieur du poêle et au dessus de la vitre. L'air secondaire arrive vers la chambre de combustion grâce au déflecteur spécialement conçu, situé derrière la chambre de combustion.

L'air secondaire est injecté dans les gaz du conduit à la fois au dessus et en face du feu, rendant ainsi le processus de combustion plus propre et plus efficace. L'admission d'air secondaire est constamment ouverte et n'est pas réglable. Pour plus de sécurité, votre poêle est équipé d'une poignée amovible. Lorsqu'elle n'est pas utilisée, on peut la ranger grâce au gousset au pied droit du poêle.

## **2.2 Allumage et intervalles d'alimentation**

Le premier allumage du poêle nécessite un volume d'air important. Lorsque le poêle est froid, laissez la porte entrouverte de 2 ou 3 cm pendant les premières minutes et ouvrez complètement l'entrée d'air primaire. Ne laissez pas le poêle sans surveillance tant que la porte est ouverte.

Afin de constituer un lit de cendres raisonnable au fond du poêle, utilisez 2 à 4 livres de petit bois sec lors du premier allumage. Maintenez en permanence une couche de 1 à 1,5 pouces (2 à 3 cm) de cendres au fond de la chambre de combustion à chaque fois.

1. Lorsqu'on allume un poêle à bois, il est recommandé d'utiliser la méthode d'allumage Top Down. C'est la méthode d'allumage la plus respectueuse de l'environnement. Pour obtenir rapidement la formation d'une couche de braises, utiliser pour l'allumage 2 sachets allume-feu, ainsi que 2 kg environ de bois d'allumage. Poser les allume-feu juste en-dessous de la couche supérieure de petit bois.

Il est important de commencer avec précaution, de telle sorte que la combustion se développe lentement. De cette manière, la formation de suie sur la vitre est faible. En effet, l'encaissement de la vitre est souvent dû à une combustion trop violente et au fait que les flammes entrent en contact avec des surfaces froides. En évitant la formation de suie lors de l'allumage et en faisant en sorte d'obtenir une couche de braises chaudes, la formation de suie sera minime lors des étapes suivantes d'alimentation.

2. Ouvrez complètement le régulateur d'air secondaire.

3. Allumez le feu.

4. Après l'allumage, fermez partiellement les portes en les laissant entrouverte de 2 ou 3 cm pour laisser entrer suffisamment d'air de combustion.

5. Lorsque la cheminée est chaude après 5 à 10 minutes, fermez la porte. Un lit de braises convenable se forme au bout de 15 à 20 minutes.

6. Au moment de recharger, repartez les braises dans le foyer en les rapprochant surtout vers l'avant du poêle.

7. Poser trois morceaux de bois sur les braises. Laissez  $\frac{1}{2}$  pouce (1 cm) ou plus entre chaque morceau.

**Toujours garder la charge de carburant sous le tube d'air secondaire le plus bas. L'espace devant et au-dessus du tube à air le plus bas est réservé à la combustion de gaz volatil.**

8. Fermez la porte et laissez l'entrée d'air primaire complètement ouverte.

9. Après quelques minutes, réglez l'entrée d'air primaire en fonction de la chaleur voulue.

10. Anticipez chaque alimentation et souvenez-vous de n'ajouter qu'une modeste couche de bois tant qu'il y a beaucoup de braises. Reprenez les points 5 à 8.

**N'essayez en aucun cas d'accroître le feu de votre poêle en modifiant le réglage du contrôle d'air décrit dans ces instructions.**

**Attention : Les poêles à feu de bois ne doivent jamais être laissés sans surveillance la porte ouverte.**

**Cet appareil de chauffage à bois a un taux de combustion minimal inférieur fixé par le fabricant et qu'il convient de ne pas modifier. Les règles fédérales interdisent de modifier ce réglage ou d'effectuer sur ce poêle toute autre intervention contrevenant aux instructions de service figurant dans le présent manuel**

**Si vous laissez les portes entrouvertes, gaz et flammes peuvent sortir du foyer par l'ouverture, créant ainsi des risques d'incendie et de fumée. Nous vous conseillons d'installer un détecteur de fumée dans la pièce où vous installez le poêle.**

**NE PROVOQUER JAMAIS DE SURCHAUFFE.** Toute surchauffe peut entraîner un incendie ou des dégâts permanents pour le poêle. Si n'importe quelle pièce du poêle devient incandescente, vous êtes en surchauffe.

Le poids maximal de bois recommandé par charge est de 3.5 kg/7 lbs (environ 5 bûches).

Dans des conditions de chauffage normales, la température moyenne à l'intérieur du tuyau du poêle, mesurée à 20 cm au-dessus du poêle est d'environ 300° C (550°F). La température maximale dans le tuyau du poêle ne doit pas excéder 450° C (750°F). Une température du poêle dépassant 450° C (750°F) est considérée comme surchauffe et peut être la cause d'une usure prématuée du poêle.

Pour permettre de mesurer correctement la température de fonctionnement de votre poêle, nous recommandons l'utilisation du Thermomètre à gaz pour poêle Morsø (article # 62901200). Le Thermomètre à gaz pour poêle est magnétique; il se fixe sur le tuyau du poêle, à environ 20 cm (8") au-dessus de la plaque supérieure du poêle, et mesure la température de surface du tuyau du poêle. Disponible auprès de votre distributeur Morsø agréé.

#### **Conditions de tirage**

Si de la fumée ou des émanations se dégagent du poêle lors de l'allumage et de l'alimentation ou si tout simplement le feu ne prend pas, ceci est sûrement dû à un faible tirage. (Dans très peu de cas, pas assez d'air frais entre dans la pièce – voir les conseils d'installation plus haut). Demandez conseil à votre vendeur pour savoir comment améliorer votre système de tuyauterie pour accroître le tirage.

#### **Règles de feu de bois**

Pour avoir moins de chaleur, mettez moins de bûches dans le poêle et réduisez la quantité d'air. Il est toujours important de maintenir une bonne couche de braises.

Moins de chaleur – moins de bois – moins d'air

Plus de chaleur – plus de bois – plus d'air

Des dépôts de suie se font sur la vitre si le poêle fonctionne trop lentement ou si votre bois n'est pas assez sec.

Il est fortement conseillé de ne pas laisser le poêle allumé pendant la nuit. En plus des effets nocifs sur l'environnement, le rendement du bois serait mauvais puisque les gaz qu'il contient ne s'enflamme pas à basse température mais se fixent sous forme de suie (gaz non consumés) dans la cheminée et le poêle.

#### **Détecteurs de monoxyde de carbone**

Dans certaines juridictions, l'installation de détecteurs de fumée et d'oxyde de carbone dans les lieux où sont placés des appareils de chauffage est obligatoire. Pour assurer votre sécurité, installez au moins un détecteur de fumée à chaque étage de votre maison. Il devra être placé à distance de l'appareil à bois et à proximité des espaces de repos. En effet, en plaçant un détecteur de fumée trop près du poêle, l'alarme risque de se déclencher si un rejet de fumée intervient lorsqu'on ouvre la porte pour remettre du bois. Suivez les instructions du fabricant de détecteurs de fumée concernant l'emplacement, l'installation et l'entretien.

## **3.0 Entretien**

**Lors de l'entretien de votre poêle, portez toujours des lunettes et des gants de protection.**

### **3.1 Entretien extérieur**

La surface du poêle est peinte avec la peinture résistant à la chaleur Senotherm. Nettoyez de préférence avec un aspirateur équipé d'un embout à brosse souple ou en essuyant avec un chiffon anti-peluche.

Au bout d'un certain temps, la surface peinte peut devenir légèrement grise. Vous pouvez trouver une boîte de peinture en spray pour retouche Morsø chez votre revendeur. Il suffit de quelques minutes – en suivant les instructions – pour l'appliquer. Lors du premier allumage après une retouche, une légère odeur peut se dégager du poêle le temps de l'accoutumance de la peinture. Assurez-vous de bien aérer la pièce pendant cette période.

### **3.2 Entretien intérieur**

#### **Vitre**

Si le poêle est généralement utilisé aux températures correctes, la vitre ne devrait être que peu ou pas sale. Si de la saleté se dépose lors de l'allumage, la majeure partie brûlera au fur et à mesure que la température augmente. En cas de dépôts plus importants qui ne brûlent pas, utilisez le nettoyant pour vitres Morsø. Appliquez sur la vitre froide en suivant les instructions. N'utilisez jamais de nettoyants abrasifs sur la surface vitrée.

#### **Causes possibles de vitre sale**

- Combustible trop humide
- Bûches trop grandes ou non fendues
- Température de combustion trop basse

**Ne pas nettoyer le verre lorsqu'il est chaud**

**Remplacez immédiatement toute vitre cassée.**

**N'utilisez pas votre poêle si la vitre de la porte est endommagée.**

Si vous devez changer la vitre, utilisez du verre céramique à haute température fourni par Morsø. Contactez votre concessionnaire Morsø.

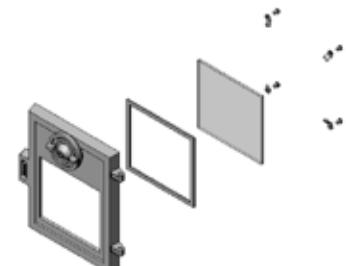

#### **Installer la vitre**

N'installez jamais la vitre lors du fonctionnement du poêle.

#### **Remplacement du vitre céramique**

Le vitre céramique ne peut pas être recyclé, car sa température de fusion est trop élevée. Si le vitre céramique est mélangé au verre normal, la matière première est dénaturée et le processus de recyclage du verre peut être interrompu. Veillez à ce que le vitre réfractaire ne soit pas traité comme matériau à recycler normal. Vous contribuez beaucoup à la protection de l'environnement.

ATTENTION ! Doit être déposé comme vitre céramique dans une station de collecte des déchets.

1. Soulevez la porte pour la sortir de ses gonds et posez-la face avant vers le bas sur des cartons ou tout autre tissu non abrasif.
2. Dévissez les quatre boulons qui maintiennent la vitre. (Au cas où un boulon se casserait lors du dévissage, retirer le reste du boulon en perçant au centre avec une mèche de perceuse acier grande vitesse de 1/8 de pouce (3 mm). Des mèches plus petites peuvent également convenir mais n'utilisez en aucun cas de mèche plus grande. Assurez-vous que la mèche ne touche pas les bords du boulon – ceci pouvant endommager le filetage dans la fonte).
3. Retirez le joint d'étanchéité en céramique usagé et nettoyez la surface en dessous avec de la paille de fer ou du papier de verre pour éliminer les particules.
4. Mettez en place le nouveau joint d'étanchéité tout autour de l'emplacement de la vitre en vous assurant de bien le pincer tout le long de façon à faire un joint continu. Ne laissez aucun espace.
5. Placez la nouvelle vitre sur les bandes et revissez les boulons et équipements à la main.
6. Enfin, donnez environ un demi-tour supplémentaire aux boulons. La vitre doit être tenue assez fermement de manière à ne pas bouger pendant le nettoyage. Ne vissez pas les boulons trop fort car cela entraîne une pression excessive sur la vitre risquant de la casser - important !

**Afin de réduire le risque de casser la vitre, évitez de frapper sur la vitre ou de claquer la porte.**

#### **Pièces de rechange intérieures**

L'équipement feu – comprenant le cendrier, la grille, les briques réfractaires, plaques de fonte pour protection feu, la vitre, le déflecteur et le collier de serrage du tuyau – est soumis à une chaleur extrême produite par le feu. De temps en temps, il peut s'avérer nécessaire de remplacer une de ces pièces pour des raisons d'entretien routinier.

#### **Remplacement des pierres**

Lors du remplacement des pierres, dévisser à l'arrière du poêle la plaque de rayonnement, fixée avec 4 vis. Cela permet d'accéder aux 2 boulons, maintenant en place la chicane pour la fumée. Retirer ces boulons de manière à pouvoir lever la chicane pour la fumée à l'intérieur du poêle. Lever la chicane pour la fumée afin de pouvoir sortir la pierre du poêle et installer la nouvelle. Placer les pierres latérales dans les rainures de la plaque de fond en vermiculite. Lorsque les pierres sont placées correctement, abaisser la chicane pour la fumée sur les pierres et la revisser sur le côté arrière en fonte du poêle.

Pour terminer, monter la plaque de rayonnement arrière avec les 4 vis.

#### **REMARQUE : L'équipement feu, la corde céramique et la finition de peinture ne sont pas couverts par la garantie.**

Toutes ces pièces de rechange sont en vente chez votre concessionnaire Morsø et nous vous recommandons de remplacer toute pièce endommagée aussi tôt que possible afin d'éviter des dégâts supplémentaires.

Si le déflecteur est déformé par une surchauffe, le poêle continue à fonctionner même si sa performance peut être compromise. Remplacez-le dès que possible.

#### **Causes possibles d'usure interne rapide**

- Feu fort et persistant
- Accumulation de suie et de cendres

#### **Joint d'étanchéité**

Le joint entourant le périmètre des portes peut durcir avec le temps. Remplacez-les s'il devient difficile de fermer les portes ou si l'air commence à s'infiltrer autour des portes, causant ainsi un feu un peu moins contrôlable. Un jeu de joint Morsø est en disponible chez votre revendeur.

#### **3.3 Nettoyage du poêle et du conduit**

Vérifiez la présence de suie au-dessus de la plaque du déflecteur et autour de la sortie du tuyau environ tous les mois pour commencer. Si le poêle devient soudain lent, regardez si de la suie est tombée autour du collier de serrage du tuyau ou dans le tuyau/ la cheminée.

**Effectuez une inspection de la cheminée et du raccord de cheminée au moins tous les deux mois pendant la saison de chauffage pour détecter la formation éventuelle de crésote. S'il y a de crésote il faut l'éliminer pour réduire le risque d'un feu de cheminée.**

Nettoyez le tuyau/ la cheminée – sur toute la longueur du poêle jusqu'à l'extrémité du tuyau sur le toit de la maison.

Une bonne habitude est de nettoyer le tuyau après chaque saison de chauffage dans tous les cas et d'inspecter avant chaque saison pour vous assurer qu'aucun nid d'oiseau ou autre bouchon ne s'est constitué pendant la saison de non-utilisation.

#### **Elimination des cendres**

Videz les cendriers quotidiennement ou selon les besoins. Si vous laissez des cendres s'accumuler en dessous de la grille, la chaleur est piégée et cela peut entraîner un mauvais fonctionnement prématûr de la grille.

#### **Videz le cendrier selon cette procédure :**

Ouvrez les portes avant et utilisez une pelle ou un tisonnier pour remuer l'excès de cendres et la faire tomber dans les cendriers à travers les fentes de la grille. Retirez le cendrier en prenant soin de bien le tenir horizontal.

Jetez les cendres dans un récipient en métal avec un couvercle hermétique.

Placez le récipient fermé contenant les cendres sur un sol non inflammable ou sur la terre, bien éloigné de tout matériau combustible en attendant l'enlèvement définitif. Si vous vous débarrassez des cendres en les enterrant ou en les dispersant, gardez-les dans le récipient fermé jusqu'à leur refroidissement complet. Remettez le cendrier en place et fermez le poêle.

#### **Attention:**

**Ne jamais vider un poêle en train de fonctionner.**

**Ne jamais utiliser votre aspirateur ménager ou professionnel pour enlever les cendres du poêle; toujours éliminer les cendres correctement.**

#### **Crésote – Formation et élimination.**

Lorsque le bois brûle lentement, il produit du goudron et d'autres vapeurs organiques qui s'associent avec l'humidité émise pour former du crésote. Les vapeurs de crésote se condensent dans le conduit de cheminée relativement froid lors d'un feu brûlant faiblement. Il en résulte que les résidus de crésote s'accumulent sur la paroi du tuyau. Une fois enflammé, le crésote crée un feu extrêmement chaud. Vérifiez la cheminée et le conduit de cheminée au moins deux fois par mois pendant la saison de chauffage pour contrôler l'absence de formation de crésote. En cas de dépôt de crésote, éliminez-le pour diminuer le risque de feu de cheminée.

## Ramonage de la cheminée

Inspectez le système régulièrement au cours de la saison de chauffage comme partie intégrante d'un programme d'entretien régulier. Pour inspecter la cheminée, laisser le poêle refroidir complètement. Puis, à l'aide d'un miroir, regardez par le collier du tuyau dans le conduit de cheminée. Si vous ne pouvez pas inspecter le système de conduit de cette façon, déconnectez le poêle pour faciliter l'accès.

Nettoyez la cheminée à l'aide d'une brosse de la même forme et taille que le tuyau. Faites coulisser la brosse de haut en bas et inversement dans le conduit afin de faire tomber tous les dépôts en bas de la cheminée où vous pouvez les évacuer grâce à la porte de nettoyage.

Nettoyez le raccord de cheminée en déconnectant les sections, mettez-les à l'extérieur et éliminez tous les dépôts avec une brosse dure. Remettez les sections du raccord en place après le nettoyage en vous assurant de sécuriser les joints entre chaque section avec des vis en tôle. Si vous ne pouvez pas inspecter ou nettoyer la cheminée vous-même, contactez votre concessionnaire Morsø ou un ramoneur professionnel.

## En cas de feu de cheminée, agissez rapidement et :

1. Fermez le contrôle d'air.
2. Faites sortir tout le monde de la maison.
- 3.appelez les pompiers.

## Entretien annuel

Avant la saison de chauffage, effectuez un nettoyage en profondeur, inspectez et réparez:

Nettoyez la cheminée et le raccord de cheminée à fond.

Vérifiez si la cheminée est abîmée ou usée. Remplacez les sections faibles de la cheminée préfabriquée. Faites faire les réparations par un maçon pour la cheminée maçonnée.

Inspectez le raccord de cheminée et remplacez les sections endommagées.

Vérifiez l'usure ou la compression de l'étanchéité et remplacez si nécessaire.

Vérifiez si la vitre est craquelée; remplacez si nécessaire.

Vérifiez si la porte et les poignées ferment bien. Ajustez si nécessaire.

## UTILISEZ TOUJOURS DES PIÈCES DE RECHANGE D'ORIGINE MORSØ

## 3.4 Périodes prolongées de non-utilisation du poêle

### Important:

Si vous n'utilisez pas le poêle pendant une période quelconque, nettoyez-le en profondeur et laisser l'aération légèrement ouverte pour laisser l'air circuler. Assurez-vous que le tuyau ne laisse pas entrer d'eau de pluie près du poêle ; installez un chapeau sur la cheminée mais ne bouchez pas complètement le tuyau.

Ces mesures permettent d'assurer un léger courant d'air dans le poêle et au corps du poêle de rester sec, dans les moindres recoins.

Les cendres laissées dans un poêle qui ne brûle pas attirent l'humidité comme du papier buvard.

Si vous laissez l'humidité s'installer dans le poêle, de la rouille se forme. La rouille s'étend dès qu'elle prend prise. Ceci peut entraîner une pression excessive sur les joints du poêle, endommageant ainsi ultérieurement le poêle.

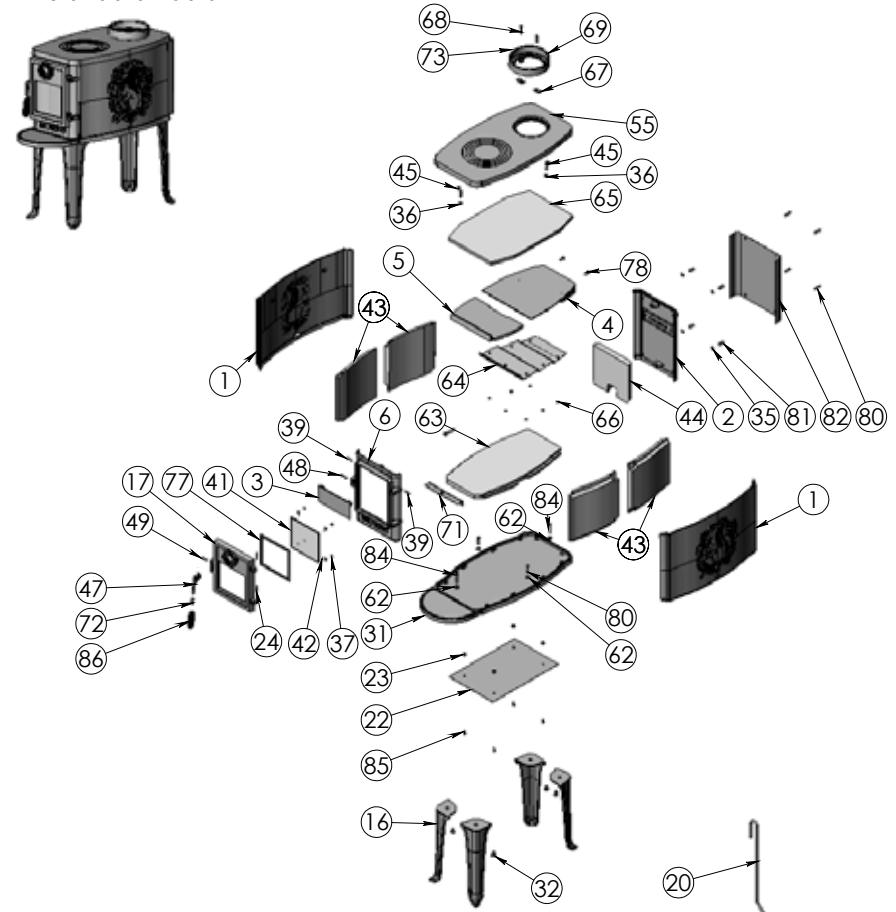

**REMARQUE :** Il est préférable de nettoyer à fond le poêle à la fin de la saison de chauffage. Ajouter un dessicatif, comme de la litière pour chat, dans le cendrier aide à absorber l'humidité pendant les mois d'été. Assurez-vous de l'enlever avant la saison de chauffage.

## Nous vous remercions d'avoir acheté un poêle Morsø

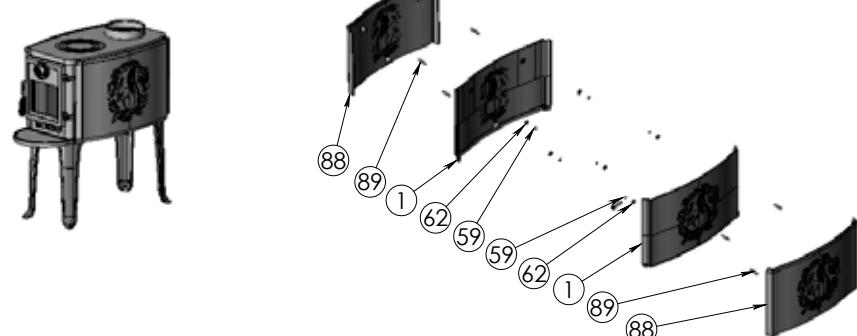

Nous vous souhaitons des années de chaleur sans souci en sa compagnie. Après quelques expérimentations initiales avec les techniques d'alimentation et de fonctionnement, vous trouverez vos habitudes. En cas de problèmes après cette courte phase d'apprentissage, adressez-vous au vendeur de votre poêle. Si celui-ci est dans l'impossibilité de vous aider, veuillez nous contacter par écrit à l'adresse figurant sur la première page de cette publication.

## 3.5 Schéma des pièces détachées pour le modèle Morsø 2B Standard

### 2B Standard Radiant

## Enregistrement de la garantie du produit

### CERTIFICAT DE GARANTIE 10 ANS MORSØ

Chaque produit Morsø est le résultat de plus de 160 années d'expérience de la conception et de la fabrication des poêles à bois. Le contrôle de la qualité a toujours été la clé de voûte de notre processus de production. Des mesures rigoureuses ont été mises en place à chaque étape clé. Par conséquent, lorsqu'un poêle est fourni par un revendeur Morsø agréé, Morsø offre une garantie de dix ans contre tous les défauts de fabrication sur tous les principaux composants extérieurs de ses poêles.

Pour en savoir plus sur la «garantie de 10 ans Morsø / carte d'enregistrement de produit» et enregistrer votre nouveau poêle Morsø en ligne, allez sur le site:  
<http://international.morsoe.com/warranty-registration>

## **IMPORTANT!**

### **Comment chauffer en toute sécurité pour l'environnement et pour vous-même!**

- Utiliser uniquement du bois sec**

Utiliser uniquement du bois sec (teneur en humidité max. de 20%) et non traité. Le combustible doit être coupé en deux et faire de 8 à 12 cm d'épaisseur.

- Allumer**

Allumer avec du bois d'allumage sec (utiliser 1 - 2 kg). Laisser la porte entrouverte et rester à proximité du poêle pendant la phase d'allumage.

- Obtenir une bonne couche de braises**

S'assurer d'avoir une bonne couche de braises avant d'alimenter le feu. Le bois doit s'allumer en 2 minutes. Si les bûches ne s'allument pas, dans des circonstances extrêmes, cela peut provoquer l'allumage des gaz de combustion, ce qui présente un risque de dommages matériels et de préjudices corporels.

- Alimenter le feu**

Pour alimenter le feu, utiliser 2 ou 3 morceaux de bois (pas plus de 2 - 2,5 kg).

- Garantir une ventilation adéquate**

C'est-à-dire des flammes claires et jaunes.

- Ne jamais laisser brûler toute la nuit**

By appointment to The Royal Danish Court

## Annex 29

Title: Firebox drawing with volume indication

Pages total: 1, excl this cover page

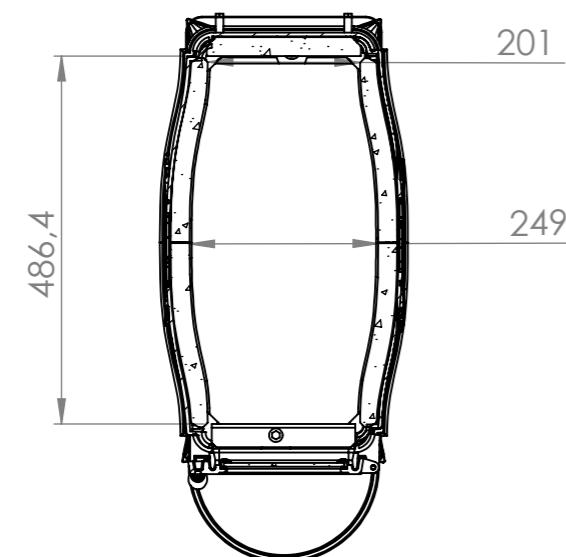

SECTION A-A

**Firebox volume**

**0.0196082 m<sup>3</sup>**  
**0.692460 ft<sup>3</sup>**

**(SolidWorks CAD calculation)**

SECTION B-B

**Firebox width: side insulation stone to side insulation stone**  
**Firebox height: hearth to top end of back insulation stone**  
**Firebox depth: back insulation stone to front door frame**

## Annex 30

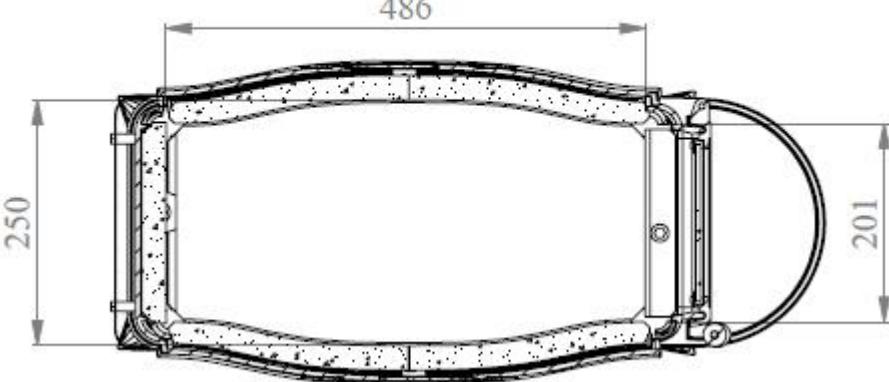

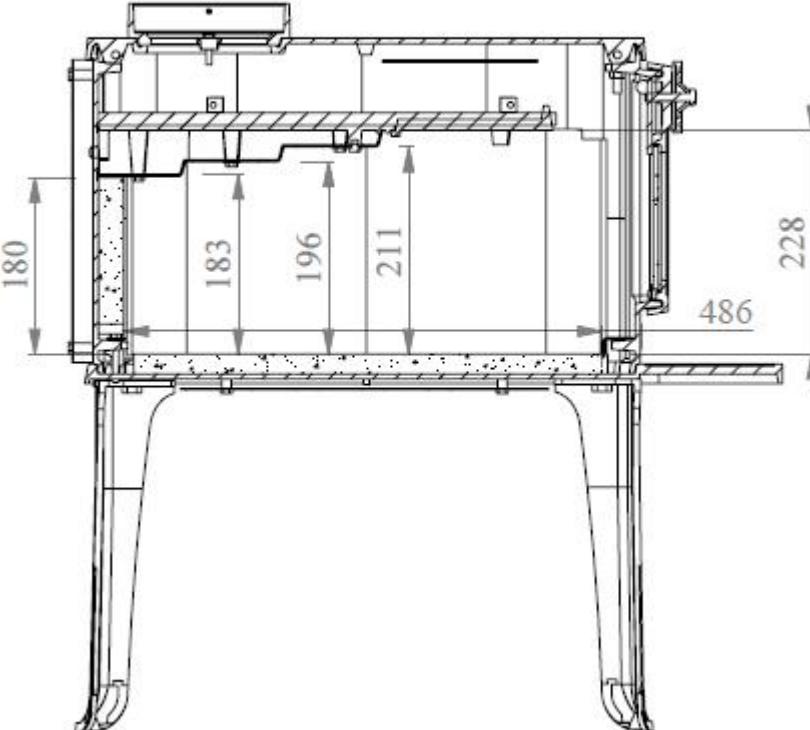

Title: Quality Assurance Plan, Morsø 2B Standard 2020

Pages total: 8, excl this cover page

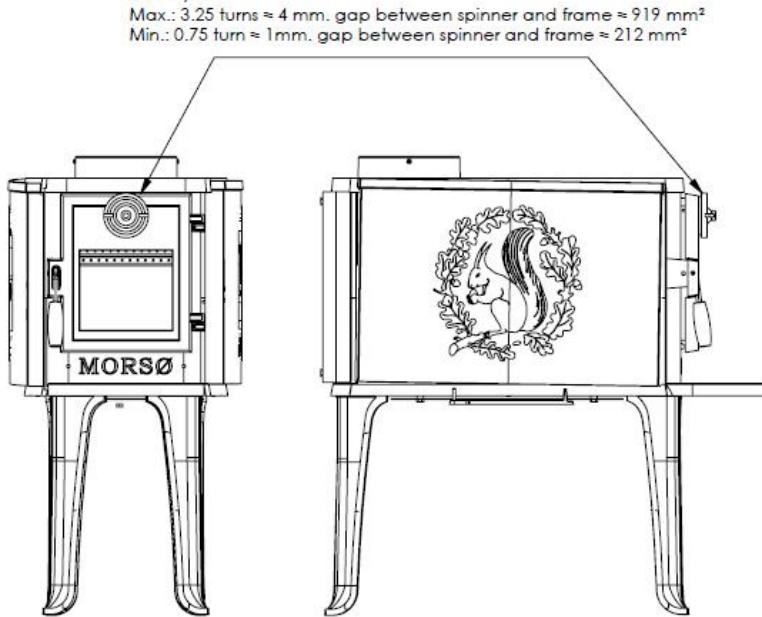

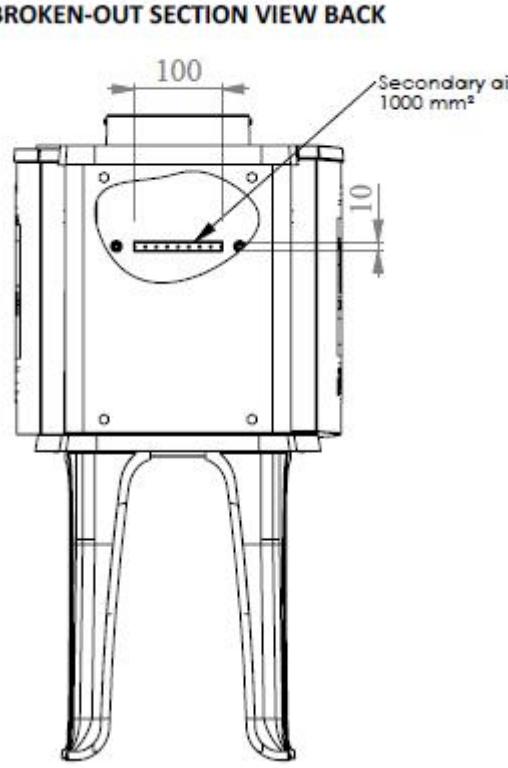

## Quality Assurance Plan 2B Standard 2020

<b>Product:</b>	Morsø 2B Standard 2020 woodstove
<b>Description and information:</b>	<p>Quality Assurance Plan is a plan for assuring the quality for products, tested according to NSPS by taking measurements and checks of some key components, referred to as K-list components. For the Morsø 2B Standard 2020 woodstove the K-list components include:</p> <ul style="list-style-type: none"> <li>(i) Firebox: Dimensions.</li> <li>(ii) Air introduction systems: Cross-sectional area of restrictive air inlets and outlets, location and method of control.</li> <li>(iii) Baffles: Dimensions and locations.</li> <li>(iv) Refractory/insulation: Dimensions and location.</li> <li>(v) Catalyst: Dimensions and location; N/A</li> <li>(vi) Catalyst bypass mechanism and catalyst bypass gap tolerances (when bypass mechanism is in closed position): Dimensions, cross-sectional area, and location; N/A</li> <li>(vii) Flue gas exit: Dimensions and location.</li> <li>(viii) Door and catalyst bypass gaskets: Dimensions and fit.</li> <li>(ix) Outer thermal shielding and thermal coverings: Dimensions and location.</li> <li>(x) Fuel feed system: For wood heaters that are designed primarily to burn pellet fuel or wood chips and other wood heaters equipped with a fuel feed system, the fuel feed rate, auger motor design and power rating, and the angle of the auger to the firebox; and N/A</li> <li>(xi) Forced air combustion system: For wood heaters so equipped, the location and horsepower of blower motors and the fan blade size. N/A</li> </ul>
<b>Procedure:</b>	<p>For each K-list component measurements will be taken according to an attached drawing, where dimensions are outlined.</p> <p>For (viii) the gaskets will be controlled that they are from the right supplier and have the correct size according to inventory list.</p>
<b>Tools needed:</b>	Rulers/measuring tapes and Caliper rule. All measurements in millimeters.
<b>Quality check frequency</b>	Minimum once per production run or once every 100 stoves, whichever is less.

**(i) Firebox: Dimensions**

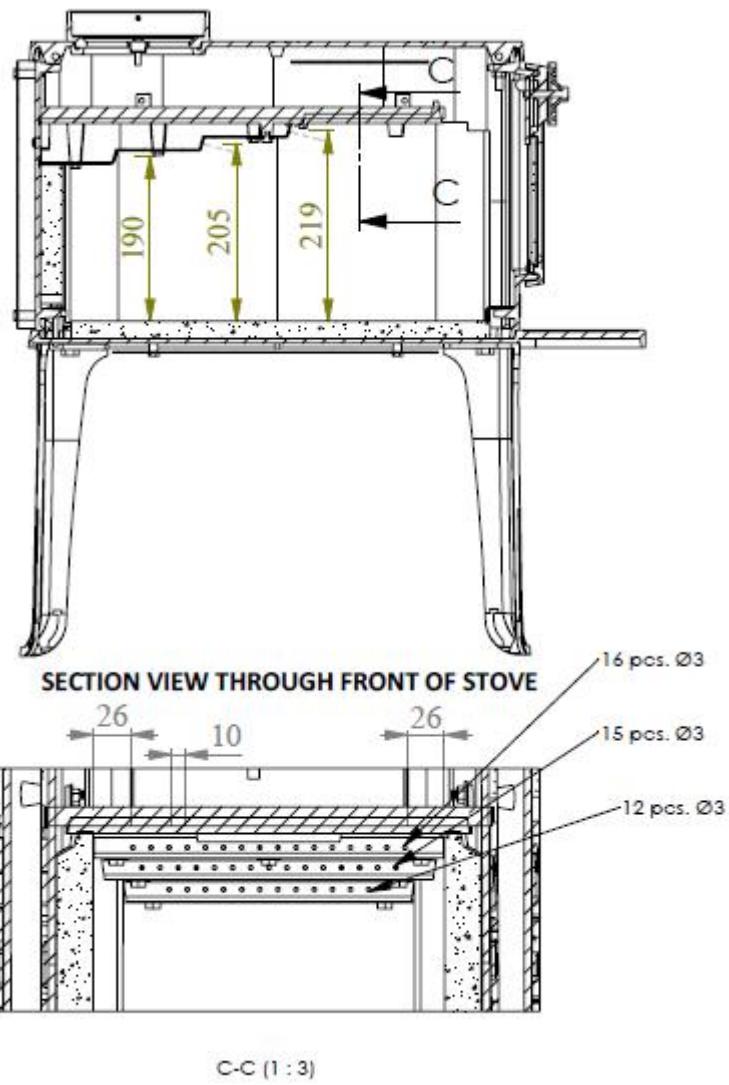

Register measurement of	<p style="text-align: center;"><b>SECTION VIEW THROUGH TOP</b></p>  <p>486</p> <p>250</p> <p>201</p>
Register measurement of	<p style="text-align: center;"><b>SECTION VIEW THROUGH TOP</b></p>  <p>180</p> <p>183</p> <p>196</p> <p>211</p> <p>228</p> <p>486</p>

**(ii) Air introduction systems: Cross-sectional area of restrictive air inlets and outlets, location and method of control**

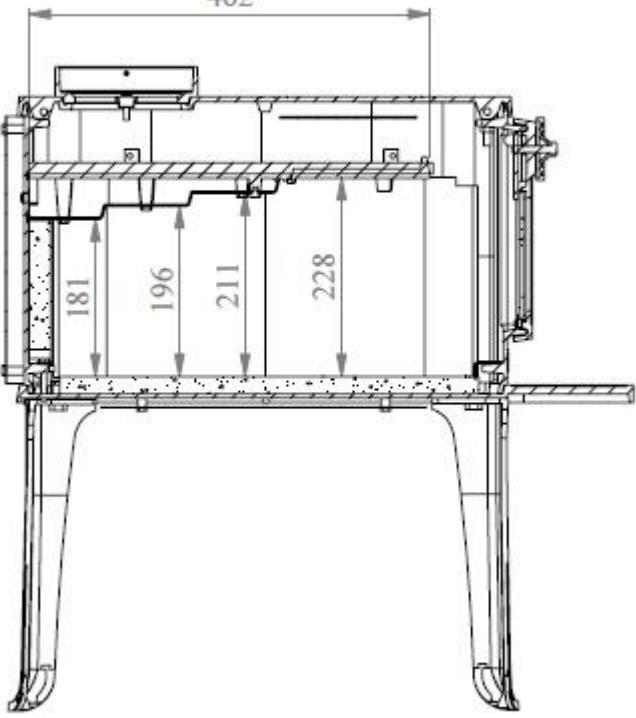

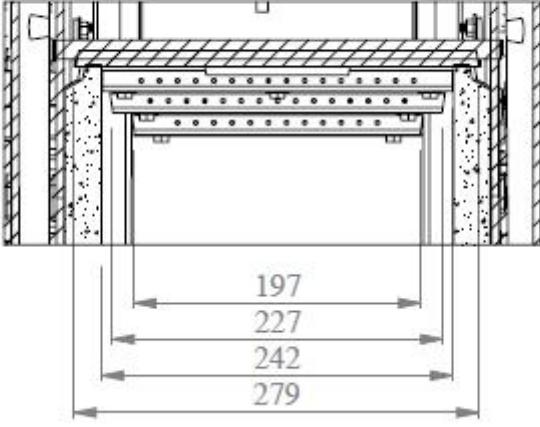

Register measurement of <ul style="list-style-type: none"><li>• Maximum primary air inlet 3.25 turns <math>\approx</math> 4 mm. gap between spinner and frame (<math>\approx 919 \text{ mm}^2</math>)</li><li>• Minimum primary air inlet 0.75 turn <math>\approx</math> 1mm. gap between spinner and frame (<math>\approx 212 \text{ mm}^2</math>)</li></ul>	 <p>Primary Air Max.: 3.25 turns <math>\approx</math> 4 mm. gap between spinner and frame <math>\approx 919 \text{ mm}^2</math> Min.: 0.75 turn <math>\approx</math> 1mm. gap between spinner and frame <math>\approx 212 \text{ mm}^2</math></p>
Register measurement of <ul style="list-style-type: none"><li>• Secondary air inlet. Fixed. Rectangular 10 x 100 mm hole</li></ul>	 <p>BROKEN-OUT SECTION VIEW BACK</p> <p>Secondary air 1000 <math>\text{mm}^2</math></p> <p>100</p> <p>10</p>

Register measurement of

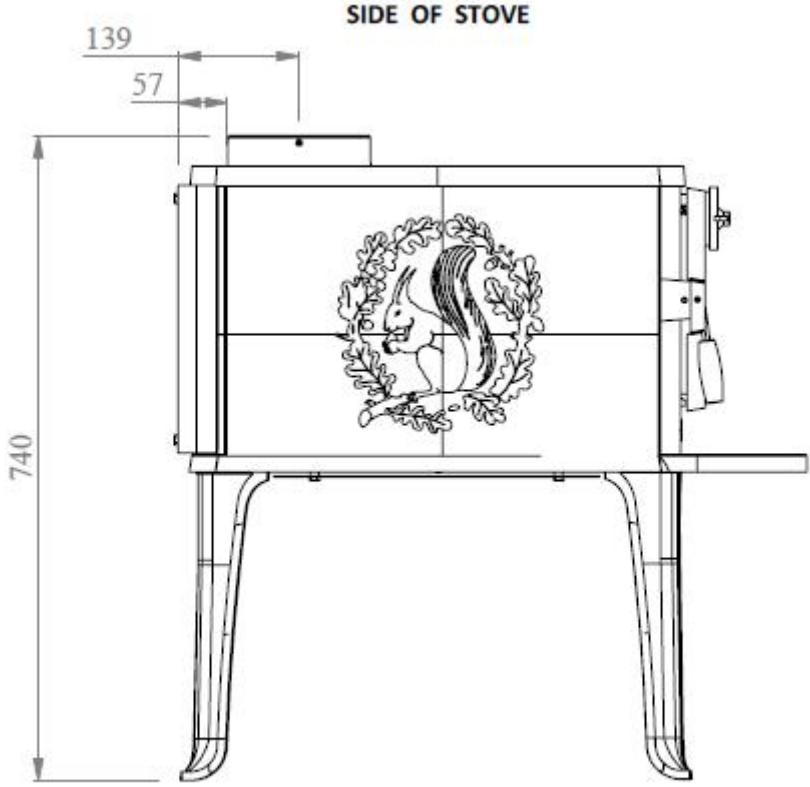

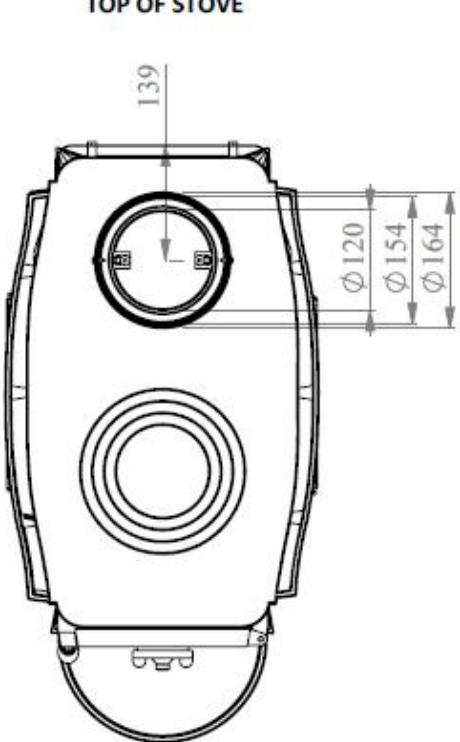

- Secondary air supplying baffle Location and number of nozzles holes

**(iii) Baffles: Dimensions and locations**

Register measurement of <ul style="list-style-type: none"><li>• Horizontal length of baffle</li><li>• Vertical location height(s) of baffle measured from hearth</li></ul>	<p style="text-align: center;"><b>SECTION VIEW THROUGH SIDE OF STOVE</b></p> 
Register measurement of <ul style="list-style-type: none"><li>• Width(s) of baffle</li></ul>	<p style="text-align: center;"><b>SECTION VIEW THROUGH FRONT OF STOVE</b></p> 

## (vii) Flue gas exit: Dimensions and location

Register measurement of	<ul style="list-style-type: none"><li>• Location of spigot</li></ul> 
Register measurement of	<ul style="list-style-type: none"><li>• Horizontal location of spigot</li><li>• Measurement of flue outlet diameter, Ø164 (outer), Ø154 (inner), Ø120 (passage)</li></ul> 

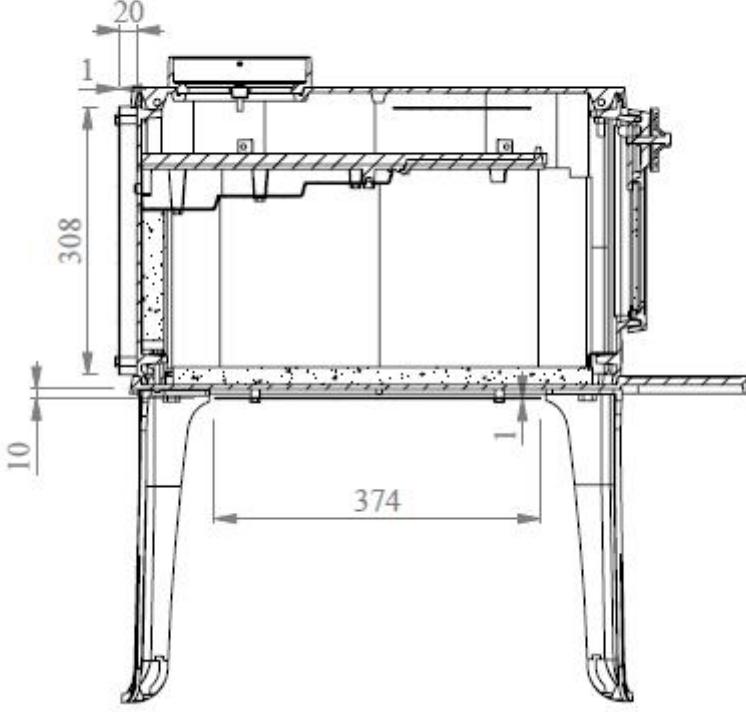

**(viii) Door and catalyst bypass gaskets: Dimensions and fit**

Register that the used gaskets robes are correct sized and of same fabric according to the inventory list.

No measurements.

The Gasket robe are bought from external supplier with own quality control.

**(ix) Outer thermal shielding and thermal coverings: Dimensions and location**

Register measurement of <ul style="list-style-type: none"><li>• Lengths of radiation shields</li><li>• Distances from radiation shield to stove</li><li>• Thickness of shields</li></ul>	<p style="text-align: center;"><b>SECTION VIEW THROUGH SIDE</b></p> 
Register measurement of <ul style="list-style-type: none"><li>• Width of radiation shields</li></ul>	<p style="text-align: center;"><b>BOTTOM VIEW</b></p>
